WHOLE BARRACKS RENEWAL
BRIGADE COMPLEX, PHASE 3A, QUAD C

# STATEMENT OF WORK

16 June 2003

U.S. ARMY CORPS OF ENGINEERS
Honolulu Engineer District

**STATEMENT OF WORK CONTENTS**

Page

CHAPTER 1 DESIGN OBJECTIVES

Paragraph 1-1 SCOPE OF WORK ..... 1-1
1-2 APPLICABLE CRITERIA ..... 1-1
1-3 DESIGN QUALITY ..... 1-1
1-4 DESIGN FREEDOM ..... 1-1
1-5 ENERGY AND RESOUCES CONSERVING FEATURES ..... 1-1
1-6 INSTALLATION REAL PROPERTY MASTER PLAN ..... 1-2
1-7 ACCESSIBILITY REQUIREMENTS ..... 1-2
1-8 ANTI-TERRORISM FORCE PROTECTIONCONSIDERATIONS ..... 1-2
1-9 HISTORIC PRESERVATION (SECTION 106) ..... 1-2
1-10 ORGANIZATIONAL STRUCTURE ..... 1-2

CHAPTER 2 FUNCTIONAL AND AREA REQUIREMENTS

Paragraph 2-1 GENERAL REQUIREMENTS ..... 2-1
2-2 BUILDING 355-COMPANY OPERATIONS FACILITIES FUNCTIONAL AND AREA REQUIREMENTS ..... 2-1
2-3 BUILDING 355- GYMNASIUM FUNCTIONAL AND AREA REQUIRMNTS .... 2-12
2-4 BUILDING 356 AND 358-UNACCOMPANIED ENLISTED PERSONNEL..... 2-13
HOUSING (UEPH) FACILITIES FUNCTIONAL AND AREA REQUIRMNTS.
2-5 BUILDING 357-DINING FACILITY FUNCTIONAL AND AREA ..... 2-21
REQUIREMENTS
2-6 BUILDING 357- SOLDIER SERVICES FUNCTIONAL AND AREA REQUIREMENTS …….. ..... 2-33
2-7 BUILDING 357-BATTALION HEADQUARTERS (HQ) FUNCTIONAL…… AND
AREA REQUIREMENTS……..... 2-40
2-8 OTHER STRUCTURES……..... 2-57

CHAPTER 3 SITE PLANNING AND DESIGN

Paragraph 3-1 SCOPE OF WORK ..... 3-1
3-2 SITE VERIFICATION ..... 3-1
3-3 EXISTING CONDITIONS ..... 3-1
3-4 EXCAVATION PERMITS ..... 3-1
3-5 SITE DEVELOPMENT PLAN ..... 3-1
3-6 GRADING AND DRAINAGE ..... 3-2
3-7 GENERAL SITE DESIGN CRITERIA ..... 3-2
3-8 CIRCULATION AND PARKING ..... 3-2
3-9 ANTITERRORISM FORCE PROTECTION (AT/FP) STANDOFF REQUIREMENTS
..... 3-4

CHAPTER 4 SITE ENGINEERING

Paragraph 4-1 REFERENCE REQUIREMENTS AND STANDARDS..... 4-1
4-2 SOILS, PAVEMENTS AND EARTHWORK ..... 4-2
4-3 EROSION AND SEDIMENT CONTROL ..... 4-5
4-4 DEMOLITION ..... 4-5
4-5 CLEARING AND GRUBBING..... 4-6
4-6 WETLANDS..... 4-6
4-7 EARTHWORK..... 4-6
4-8 BORROW MATERIAL..... 4-6
4-9 WATER DISTRIBUTION SYSTEM..... 4-6
4-10 SANITARY SEWERAGE SYSTEM..... 4-10
4-11 STORMWATER MANAGEMENTSYSTEMS ..... 4-12
4-12 GRADING AND DRAINAGE ..... 4-12
4-13 PAVEMENT DESIGN CRITERIA..... 4-15
4-14 PERMIT REQUIREMENTS.....4-15
4-15 GAS DISTRIBUTION SYSTEM.....4-15
4-16 HEATING HOT WATER [AND CHILLED WATER] DISTRIBUTION .....4-15
4-17 DELETED
4-18 DELETED
4-19 DELETED

CHAPTER 5 ARCHITECTURAL DESIGN

Paragraph 5-1 DESIGN GOALS ..... 5-1
5-2 APPLICABLE CODES AND STANDARDS..... 5-2
5-3 IBC OCCUPANCY AND BUILDING TYPE CLASSIFICATIONS..... 5-3
5-4 EXTERIOR DESIGN..... 5-3
5-5 INTERIOR DESIGN..... 5-7
5-6 PAINT FINISHES AND COATINGS ..... 5-11
5-7 PHYSICAL SECURITY REQUIREMENTS.....5-12
5-8 SIGNAGE.....5-13
5-9 ACCESSIBILITY FOR HANDICAPPED (PHYSICALLY IMPAIRED) PERSONS, BARRIER FREE DESIGN.....5-14

CHAPTER 6 STRUCTURAL DESIGN

Paragraph 6-1 GENERAL..... 6-1
6-2 DESIGN CRITERIA..... 6-1
6-3 MINIMUM LOAD STANDARDS..... 6-1
6-4 MINIMUM MATERIAL STRENGTHS AND PROPERTIES. ..... 6-2
6-5 SPECIAL REQUIREMENTS..... 6-3

CHAPTER 7 THERMAL PERFORMANCE

Paragraph 7-1 THERMAL CHARACTERISTICS..... 7-1
7-2 THERMAL INSULATION..... 7-1
7-3 INFILTRATION..... 7-1

CHAPTER 8 PLUMBING

Paragraph 8-1 GENERAL ..... 8-1
8-2 APPENDIX AND RECOMMENDATIONS ..... 8-2
8-3 DESIGN CALCULATIONS ..... 8-3
8-4 EQUIPMENT ..... 8-3
8-5 FIXTURES ..... 8-3
8-6 PIPING SYSTEMS ..... 8-4
8-7 MISCELLANEOUS ITEMS ..... 8-5
8-8 PIPE INSULATION ..... 8-6

CHAPTER 9 ELECTRICAL SYSTEMS

Paragraph 9-1 BUILDING ELECTRICAL SYSTEM ..... 9-1
9-2 TELECOMMUNICATIONS PREMISES DISTRIBUTION SYSTEM ..... 9-7
9-3 INTERIOR CABLE TELEVISION SYSTEM ..... 9-10
9-4 EXTERIOR ELECTRICAL DISTRIBUTION SYSTEM ..... 9-11
9-5 TELECOMMUNICATIONS OUTSIDE PLANT ..... 9-17
9-6 EXTERIOR CABLE TELEVISION SYSTEM ..... 9-19
9-7 SPECIAL UTILITIES AND SUPPLEMENTARY CONSTRUCTION ..... 9-21

CHAPTER 10 HEATING, VENTILATING, AND AIR CONDITIONING

Paragraph 10-1 GENERAL ..... 10-1
10-2 APPENDIX AND RECOMMENDATIONS ..... 10-4
10-3 DESIGN CALCULATIONS ..... 10-4
10-4 MECHANICAL SYSTEMS ..... 10-5
10-5 CENTRAL COOLING EQUIPMENT ..... 10-5
10-6 AIR DISTRIBUTION SYSTEMS ..... 10-11
10-7 PIPING SYSTEMS ..... 10-14
10-8 INSULATION ..... 10-15
10-9 INSTRUMENTATION AND CONTROLS ..... 10-15
10-10 TESTING, ADJUSTING AND BALANCING ..... 10-17
10-11 COMMISSIONING ..... 10-17
10-12 TRAINING ..... 10-17

CHAPTER 11 ENERGY CONSERVATION

Paragraph 11-1 ENERGY RECOVERY EQUIPMENT ..... 11-1

CHAPTER 12 FIRE PROTECTION

Paragraph 12-1 GENERAL ..... 12-1
12-2 APPENDIX AND RECOMMENDATIONS ..... 12-2
12-3 DEFINITIONS ..... 12-2
12-4 AUTHORITY HAVING JURISDICTION (AHJ) ..... 12-2
12-5 WAIVER TO CRITERIA ..... 12-2
12-6 PRIORITY OF CONFLICTING REQUIREMENTS ..... 12-2
12-7 FIRE PROTECTION ENGINEER SERVICES ..... 12-3
12-8 IBC REQUIREMENTS ..... 12-3
12-9 LIFE SAFETY REQUIREMENTS ..... 12-3
12-10 FIRE SPRINKLER AND FIRE PUMP REQUIREMENTS ..... 12-4

12-11 FIRE ALARM ..... 12-5
12-12 MISCELLANEOUS FIRE REQUIREMENTS ..... 12-5

CHAPTER 13 SUSTAINABLE DESIGN

Paragraph 13-1 SUSTAINABLE DESIGN GOALS ..... 13-1
13-2 PROJECT REQUIREMENTS ..... 13-1
13-3 SpiRiT REQUIREMENTS ..... 13-3

CHAPTER 14 COMPREHENSIVE INTERIOR DESIGN

Paragraph 14-1 COMPREHENSIVE INTERIOR DESIGN PACKAGE ..... 14-1
14-2 PRESENTATION FORMATS ..... 14-1
14-3 DRAWING INFORMATION REQUIREMENTS ..... 14-2
14-4 BUILDING INTERIOR DESIGN SUBMITTAL ITEMS ..... 14-3
14-5 FURNISHINGS INTERIOR DESIGN SUBMITTAL ITEMS ..... 14-4

CHAPTER 15 HISTORIC PRESERVATION

Paragraph 15-1 DESIGN BACKGROUND ..... 15-1
15-2 ADDITIONS ..... 15-1
15-3 EXTERIOR FENESTRATIONS ..... 15-1
15-4 EXTERIOR ELEMENTS ..... 15-1
15-5 GYMNASIUM (ORIGINAL THEATER) ..... 15-2

CHAPTER 16 ENVIRONMENTAL REQUIREMENTS

Paragraph 16-1 ENVIRONMENTAL ISSUES ..... 16-1
16-2 POTENTIAL ENVIRONMENTAL CONCERNS ..... 16-1
16-3 ASBESTOS ..... 16-1
16-4 LEAD ..... 16-1
16-5 PCB LIGHT BALLASTS ..... 16-2
16-6 UNDERGROUND STORAGE TANKS ..... 16-2
16-7 MERCURY SWITCHES ..... 16-2
16-8 SAFETY ..... 16-2
16-9 APPLICABLE FEDERAL AND STATE LAWS AND ACTIONS ..... 16-2
16-10 MERCURY & UST ..... 16-3
16-11 POLYCHLORINATED BIPHENYLS (PCBS) ..... 16-4
16-12 SAFETY AND HEALTH ..... 16-4

CHAPTER 17 LANDSCAPE DESIGN

Paragraph 17-1 OBJECTIVES ..... 17-1
17-2 REFERENCES ..... 17-1
17-3 DESIGN CONSIDERATIONS ..... 17-1
17-4 LANDSCAPE MINIMUM REQUIREMENTS ..... 17-2

# CHAPTER 1

## DESIGN OBJECTIVES

1-1 **SCOPE OF WORK**. Design and construction shall comply with the specifications and requirements contained in this Request for Proposals (RFP). The design and technical criteria contained and cited in this RFP establish minimum standards for design and construction quality. The objective of this solicitation is to renovate and improve an existing Brigade Complex . This contract shall consist of the design for renovation and improvement of the existing Quad C located on a 7-acre site bounded by Waianae, Foote, Meigs and Flagler Avenues.

1-1.1 **Site Area**. The site is described on the RFP drawings included as part of this solicitation and includes approximately 7 acres.

1-1.2 **Site Work**. Site work includes all design and construction of site features described in the RFP, including but not limited to upgrading of the existing water distribution/fire protection/sewer/drainage systems, site grading, new curbs/gutters, new walkways, new AC paved access roads, additional parking, new surfacing/striping/goal posts for the basketball court, installation of traffic gates, bike racks/slabs and a new trash enclosure.

1-1.3 **Special Utilities and Supplementary Construction**. Not required/not applicable.

1-1.4 **Demolition Considerations and Requirements**. Existing water/sewer/drainage facilities, fencing, AC pavement, curbing and walkways within Quad C shall be removed as required for AT/FP standoff requirements. In compliance with Section 106 of the National Historic Preservation Act (NHPA) of 1966, the National Park Service (NPS), the Advisory Council for Historic Preservation (ACHP), the Hawaii State Historic Preservation Officer (SHPO), the Historic Hawai'i Foundation (HHF), the Outdoor Circle (OC), and other interested parties shall be afforded the opportunity to review and comment on demolition proposals before any decisions are made final.

1-1.5 **Environmental Considerations and Mitigation Requirements**. A programmatic Environmental Assessment was completed to address USARHAW's Whole Barracks Renewal Program and a Finding of No significant Impact (FONSI) was signed by the Installation Commander 20 July 1995. A supplemental Environmental Assessment has been completed for the Quad renovations.

1-2 **APPLICABLE CRITERIA**. Applicable design and construction criteria references are listed in the RFP sections and Attachments of the Statement of Work. Criteria shall be taken from the most current references as of the RFP issue date. Referenced codes and standards are minimum acceptable criteria. Administrative, contractual, and procedural features of the contract shall be as described in other sections of the RFP.

1-3 **DESIGN QUALITY.** The main objectives of this solicitation are to obtain an improved Brigade Complex including support facilities and associated site development within funds available, and to maximize design quality. Design quality is achieved through the optimization of interior planning, integration of buildings with the site, sustainability, selection of building systems for low-cost maintenance and operation, and an overall balance of aesthetics and functionality.

1-4 **DESIGN REQUIREMENTS**. Requirements stated in this RFP are minimums. Designs may incorporate factory fabricated components or modules.

1-5 **ENERGY AND RESOURCES CONSERVING FEATURES**. Public Law 102-486, Executive Order 12902, and Federal Regulations 10 CFR 435, require federal buildings to be designed and constructed to reduce energy consumption in a life-cycle, cost-effective manner using renewable energy sources when economical. Products designed to conserve energy and resources by either controlling the amounts of

consumed energy or by operating at increased efficiencies should be considered. Minimum requirements for this project are listed in the Statement of Work.

1-6 **INSTALLATION REAL PROPERTY MASTER PLAN**. The installation real property master plan provides comprehensive documentation of the existing conditions of natural, man-made, and human resources. It also guides future land-use development. Design of this project shall incorporate the design guidance and criteria contained in the Schofield Barracks Real Property Master Plan, excerpts of which are contained in an attachment to the Statement of Work.

1-7 **ACCESSIBILITY REQUIREMENTS**. All areas and facilities required to be accessible to physically disabled persons shall conform to the Uniform Federal Accessibility Standards (UFAS) Federal Standard 795, and the Americans With Disabilities Act Accessibility Guidelines (ADAAG). The following areas shall be accessible:

1-7.1 Areas that may be used by non-military employees or visitors. Specific areas are indicated in the Statement of Work.

1-7.2 Handicap accessible visitor and non-military employee parking spaces near buildings as indicated in Chapter 3 of the Statement of Work.

1-7.3 Minimum of one accessible pedestrian route linking handicap accessible parking areas with accessible building entrances.

1-8 **ANTI-TERRORISM AND FORCE PROTECTION CONSIDERATIONS**. The anti-terrorism and force protection shall be designed in accordance with the Department of Defense Minimum Antiterrorism Standards for Buildings, July 31, 2002, UFC 4-010-01. The requirement for floor reinforcing (FRP or equal) as required by paragraph B-2.1.3 of UFC 4-010-01 has been listed as a separate bid option since it is not required in accordance with the Interim Department of Defense Antiterrorism/Force Protection Construction Standards, dated 5 Dec 1999. Refer to Section 01010, Chapter 6, Structural Design and Attachment 9, Blast and Progressive Collapse Vulnerability Assessment (Concept Design) for anti-terrorism and force protection (AT/FP) structural design criteria. AT/FP structural design criteria does not require building hardening since standoff distances have been met by providing controlled access parking and a parking ban along the roads within the standoff distances, in accordance with UFC 4-010-01.

1-9 **HISTORIC PRESERVATION (SECTION 106):** In compliance with Section 106 of the NHPA of 1966, NPS, ACHP, SHPO, HHF, OC, and other interested parties shall be afforded the opportunity to review and comment on all design proposals before any decisions are made final.

1-10 **ORGANIZATIONAL STRUCTURE**. The renovated Quad under this solicitation will be occupied by soldiers. This solicitation will provide working and living accommodation spaces for enlisted personnel in the 3rd Brigade, 25th Infantry Division (Light).

**<u>Building 355:</u>**

- One Medium COF HHC 3rd Infantry Brigade
- One Large COF 2-5th Infantry Battalion HHC
- One Medium COF 2-5th Infantry Battalion Rifle Company
- One Medium COF 2-5th Infantry Battalion Rifle Company
- One Medium COF 2-5th Infantry Battalion Rifle Company
- Renovate existing Gymnasium space on the 3rd Floor

**<u>Building 357:</u>**

- One 501-800PN Enlisted Personnel Dining Facility (EPDF)
- One Large Battalion Headquarters (Btn HQ) with Troop Aid Station
- One 300PN Soldier Community Functions without Bulk Storage

**Building 356:**
150PN Unaccompanied Enlisted Personnel Housing (UEPH)
**Building 358:**
150PN Unaccompanied Enlisted Personnel Housing (UEPH)

# CHAPTER 2

# FUNCTIONAL AND AREA REQUIREMENTS

## 2-1 GENERAL REQUIREMENTS

2-1.1 **Building Functionality**. Functional spaces depicted on the RFP Concept Design Drawings have been coordinated with the proper contacts and have been sized and arranged for efficient use and circulation. The Design Build offerors shall incorporate the RFP Concept Architectural Design into their design proposal. The floor plan layout and relationship of functional spaces depicted in the architectural floor plans shall not be deviated from. All architectural criteria must be met and accounted for, see paragraph 5-2 Applicable Codes and Standards. Any changes shall be brought to the attention of the Contracting Officer for resolution in writing.

2-1.2 **Gross building area definition**. Gross building area is measured to the outside face of exterior enclosure walls. Gross area includes floor areas, penthouses, mezzanines, and other spaces as follows:

2-1.2.1 **Areas calculated as half space**. Gross area includes one-half the area of exterior covered areas such as balconies, entries, loading platforms, breezeways, exterior corridors, and porches. Exterior covered areas are measured from the face of the enclosure wall to the edge of the covered area served. Open Stairs count as half space for each floor they serve.

2-1.2.2 **Excluded space**. The following spaces are excluded from gross area calculations: Attic areas where average clear height does not exceed 2.13m [7 feet]; crawl spaces; exterior uncovered loading platforms; open courtyards; normal roof overhangs and soffits for weather protection; uncovered ramps and steps; utility tunnels; raceways; mechanical equipment platforms and catwalks.

2-1.3 **Gross area limitations**. Refer to RFP Concept Design Drawings for gross building area limitations for this RFP. Proposals shall not exceed authorized gross area limitations.

2-1.4 **Net area definition**. Net area is measured to the inside face of the room or space walls.

2-1.5 **Net Area Requirements**. Refer to RFP Concept Design Drawings for net area requirements for programmed spaces included in this chapter. The space is sized to accommodate the required function, comply with code requirements, and other requirements of the RFP.

2-1.6 **Finish Requirements**. Room finishes stated in the following paragraphs are minimums.

2-1.7 **Furniture Requirements**. The offeror is required to work with the customer to develop a Comprehensive Interior Design Package (CID) for all Quad C Buildings. Refer to SOW Chapter 14 for CID requirements. A Furnishings/Fixtures/Equipment (FF&E) paragraph description has been provided for each space for each Quad C Building, (i.e. paragraphs 2-2.1.1.2, 2-2.1.2.2, 2-2.1.3.2, etc…). These paragraphs determine which items are Government furnished and installed or Contractor furnished and installed. The offeror is required to work with the customer to determine specific furniture criteria such as acceptable materials, finishes and quality levels. The number and location of furnishings serve as an indicator of the number of power, data and communications connection points. See electrical section for more detail. The Furnishings described in the FFE paragraph for all spaces in Chapter 2 are for information only and is a starting point for the CID discussion purposes between the customer and the successful offeror.

2-1.7.1 The offeror is not required to purchase the Furnishings (tables, chairs, sofa, bed, etc.) for the programmed spaces unless noted otherwise. Also, the offeror is not required to provide equipment that is not installed (refrigerator, microwave, washer, and dryer).

**2-2 BUILDING 355 - COMPANY OPERATIONS FACILITIES FUNCTIONAL AND AREA REQUIREMENTS.** RFP Concept Design Drawings is separate and is included with this Specification Manual to describe the complete scope of work for this project. The company operations facilities (COF) building(s) shall consist of administrative areas, heavy equipment storage and light equipment storage for each company, support spaces, and common locker/shower facilities. Building 355 contains the Heavy Equipment storage for four medium and one large Company Operations Facilities (COF) and one COF Toilet/Shower located on the first floor. COF Administration Offices and Classrooms for three medium COFs and one COF Toilet/Shower will occupy the second floor. COF Administration Offices and Classrooms for one medium COF and one large COF and one Toilet/Shower will occupy the third floor. COF functions and areas that occur in Building 355 shall be as follows:

2-2.1 **COF Administrative Areas**. Provide one group of administrative areas per company. Company leadership will manage the organization, receive visitors, and conduct day-to-day business from the COF administrative areas. Entrance shall be separate and distinct from the entrances to company light equipment storage areas and to COF administrative areas. Each COF Administrative area shall be provided with a Company Identification Sign (5 total) see paragraph 5-8.2.6. Military personnel will staff the facility. Provide the following areas for each company:

2-2.1.1 **Company Commander (CO)**. Provide one per company located on the second and third floors. Room shall be accessed through the Admin Office. Occupants: 1, and occasional visitors.

2-2.1.1.1 Function: Private office for commanding officer.

2-2.1.1.2 Furnishings/Fixtures/Equipment: the following items will be government furnished and installed: one desk with return, one credenza, one bookcase, two legal-size four-drawer file cabinets, one conference table, four side chairs, and one desk chair.

2-2.1.1.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-2.1.1.4 Other requirements: Provide 914 mm 3'-0" wide door into room. Room shall have exterior window.

2-2.1.2 **Executive Officer (XO)**. Provide one per company located on the second and third floors. Room shall be accessed through the Admin Office. Occupants: 1, and occasional visitors.

2-2.1.2.1 Function: Private office for the company executive officer.

2-2.1.2.2 Furnishings/Fixtures/Equipment: the following items will be government furnished and installed:one desk with return, one bookcase, two legal-size four-drawer file cabinets, one side chair and one desk chair.

2-2.1.2.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-2.1.2.4 Other requirements: Provide 914 mm 3'-0" wide door into room. Room shall have exterior window.

2-2.1.3 **First Sergeant (1 SG)**. Provide one per company located on the second and third floors.

Room shall be accessed through the Admin Office. Occupants: 1, and occasional visitors.

2-2.1.3.1 Function: Private office for the company first sergeant (highest ranking non-commissioned officer).

2-2.1.3.2 Furnishings/Fixtures/Equipment: the following items will be government furnished and installed: one desk with return, one bookcase, two legal-size four-drawer file cabinets, two side chairs and one desk chair.

2-2.1.3.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-2.1.3.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-2.1.4 **Training Officer (TNG)**. Provide one per company located on the second and third floors. Room shall be accessed through the Admin Office. Occupants: 1, and occasional visitors.

2-2.1.4.1 Function: Private office for the company Training Officer.

2-2.1.4.2 Furnishings/Fixtures/Equipment: the following items will be government furnished and installed: one desk with return, one bookcase, two legal-size four-drawer file cabinets, two side chairs and one desk chair.

2-2.1.4.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-2.1.4.4 Other requirements: Provide 914 mm [3'-0"] wide door into room. Exterior window is desirable.

2-2.1.5 **Admin Office (ADMIN OFF)**. Provide one per company located on the second and third floors, including interior circulation. Room shall be accessed through the Waiting Area. Occupants: 2 clerks, and occasional visitors.

2-2.1.5.1 Function: Office for company administrative clerks, storage of files, access to private offices. Clerks will have visual control of waiting area and conference room door.

2-2.1.5.2 Furnishings/Fixtures/Equipment: the following items will be government furnished and installed: two clerk desks with returns and desk chairs. The following items will be Contractor furnished and installed: reception desk (built-in casework), as indicated on the concept design drawings separating the Admin Office from the Waiting Area. The counter on the Waiting Area side shall be 1016 mm high x 305 mm deep. Admin side of reception desk shall be at desk height, and shall accommodate computer and monitor (not in contract), and writing area. Provide task lighting at all writing surfaces. Provide built-in communication and power receptacles or grommets in desk top to access wall receptacles. Desk shall have knee space and minimum two cabinets with hinged doors, and two drawers. Drawers and cabinets shall have keyed locks. Desk components shall have plastic laminate countertop, drawer, and door fronts.Provide a floor anchor for one GFGI security safe. Coordinate anchor location with furniture layout; refer to paragraph 5-7.2.8.

2-2.1.5.3 Finishes:
Floor: vinyl composition tile

Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-2.1.5.4 Other requirements: Provide 914 mm [3'-0"] wide entry door into room from Waiting Area.

2-2.1.6 **Administrative Area Corridor**. Circulation to building spaces shall comply with applicable code egress requirements. Unless otherwise required, administrative area corridor shall be capable of being secured from exterior entrances and from any adjacent public, unsecure corridors.

2-2.1.6.1 Function: Circulation and means of egress.

2-1.1.6.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: one handicap accessible electric water cooler; fire extinguishers in semi-recessed fire extinguisher cabinets to comply with applicable codes.

2-2.1.6.3 Finishes:
Floor: vinyl composition tile.
Base: resilient cove base.
Walls: impact resistant gypsum wallboard with painted finish.
Ceiling: Suspended acoustic tile ceiling grid system.

2-2.1.7 **Waiting Area (WAIT)**. Provide one per company located area on the second and third floor, incorporated into the Administrative Area Corridor. Occupants: Two or more visitors; additional visitors (e.g. those waiting to attend a large meeting in the conference room) will wait in the adjacent corridor.

2-2.1.7.1 Function: Waiting and reception area for company soldiers and visitors. Control point for access to admin office and conference room.

2-2.1.7.2 Furnishings/Fixtures/Equipment (FFE): the following items will be government furnished and installed: two side chairs; one 1219 mm high x 1829 mm wide [4'-0" x 6'-0"] wall mounted bulletin board.

2-2.1.7.3 Finishes: Match Administrative Area Corridor.

2-2.1.8 **Platoon Office (PLT)**. Provide four platoon offices per company located on the second and third floors as depicted on the RFP Concept Design Drawings. Offices shall be accessed directly from the Administrative Area Corridor, or through a common space that is accessed from the Administrative Area Corridor. Occupants: 1 in each office, and occasional visitors.

2-2.1.8.1 Function: Private office for platoon leaders or other administrators.

2-2.1.8.2 Furnishings/Fixtures/Equipment: the following items will be government furnished and installed: one desk with return, one side chair and one desk chair.

2-2.1.8.3 Finishes:
Floor: vinyl composition tile
Base: resilient cove base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-2.1.8.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-2.1.9 **Platoon Open Office (PLT OPEN OFF)**. Provide one per company located on the second and third floors, including interior circulation. Room shall be accessed through the Waiting Area. Occupants: 2 clerks, and occasional visitors.

2-2.1.9.1 Function: Office for platoon administrative clerks, storage of files, access to private offices. Clerks will have visual control of waiting area.

2-2.1.9.2 Furnishings/Fixtures/Equipment: the following items will be government furnished and installed: two clerk desks with returns and desk chairs.

2-2.1.9.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-2.1.9.4 Other requirements: Provide 914 mm [3'-0"] wide entry door into room from Waiting Area.

2-2.1.10 **Conference Room (CONF RM)**. Provide one per company located on the second and third floors. Room shall be accessed from the Waiting Area (preferable), or through the Admin Office. Admin clerks shall have visual control of Conference Room door. Occupants: up to 22 persons.

2-2.1.10.1 Function: Conference room for company leadership, staff, and visitors. Functions will include staff meetings, hearings, disciplinary sessions, training.

2-2.1.10.2 Furnishings/Fixtures/Equipment: the following items will be government furnished and installed: tables and chairs for minimum 22 people; one marker board (minimum 2438 mm wide x 1219 mm high [8'-0" x 4'-0"]) and one 2438 mm wide [8'-0"]. The following item will be Contractor furnished and installed: recessed ceiling mounted, motorized projection screen; 2438 mm wide [8'-0"].

2-2.1.10.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-2.1.10.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-2.1.11 **Conference Room Storage (ST)**. Provide one per company located on the second and third floors. Room shall be accessed from the Conference Room.

2-2.1.11.1 Function: Closet for storage of folding tables, display easels, etc.

2-2.1.11.2 Furnishings/Fixtures/Equipment:

2-2.1.11.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-2.1.11.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-2.1.12 **Toilet (TOI)**. Provide two private unisex toilet rooms per company located on the second and

third floor COF Administration area. Room shall be sized to comply with handicap accessibility requirements. Room shall be accessed from Administrative Area Corridor.

2-2.1.12.1 Function: Unisex single-occupant toilet, lavatory, and shower; for use by staff and visitors.

2-2.1.12.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: one floor mounted toilet, one wall-hung lavatory, mirror with shelf above lavatory, paper towel dispenser/waste receptacle, soap dispenser, toilet tissue dispenser, one toilet seat cover dispenser; and one ceramic tile shower enclosures and shower fixture and fittings.

2-2.1.12.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile wainscot 1219 mm high with painted water-resistant gypsum board above.
Ceiling: painted gypsum wallboard.

2-2.1.12.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-2.1.13 **Janitor Closet (JAN).**. Provide one per company located on the second and third floors. Room shall be accessed from Administrative Area Corridor.

2-2.1.13.1 Function: Service sink and storage of cleaning supplies, soap, and paper products.

2-2.1.13.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: one floor mounted mop sink, mop rack for three mops, and minimum 1524 linear mm of wall mounted stainless steel shelving.

2-2.1.13.3 Finishes:
Floor: ceramic tile
Base: ceramic tile base
Walls: painted water-resistant gypsum wallboard.
Ceiling: painted gypsum wallboard

2-2.1.13.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-2.1.14 **Administration Storage (ST)**. Provide one per company located on the second and third floors. Room shall be accessed from the Administration area.

2-2.1.14.1 Function storage for folding tables, display easels, etc.

2-2.1.14.2 Furnishings/Fixtures/Equipment:

2-2.1.14.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-2.1.14.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-2.2 **COF HEAVY EQUIPMENT STORAGE AREAS**. Provide one group of Heavy Equipment Storage areas per company consisting of Equipment Maintenance Area, Arms Vault, and Unit Storage. COF Heavy Equipment Storage Areas are required for four medium and one large Company Operations Facilities (COF).

COF Heavy Equipment Storage areas will be used to store, clean, and repair company operational equipment and weapons. Main entrance to Heavy Equipment Storage areas will be from paved service area inside the Quad; service area will be used for loading company equipment on and off of large trucks. Entrance shall be separate and distinct from the entrances to company administrative areas and to other COF Light Equipment Storage areas. Each COF Heavy Equipment Storage Area shall be provided with a Company Identification Sign (5 total), see para. 5-8.2.6. The sign will be located at the exterior wall space adjacent to the entrance. Only able-bodied military personnel will occupy COF supply areas; handicapped accessibility is not required. Heavy equipment storage areas for the COFs will have full height CMU. Provide the following areas for each company:

2-2.2.1 **Equipment Maintenance Area (EQUIP MAIN)**. Provide one for each company area on the first floor.

2-2.2.1.1 Function: Equipment cleaning, repair and access to COF storage spaces.

2-2.2.1.2 Furnishings/Fixtures/Equipment: The following items will be Contractor furnished and installed: stainless steel equipment cleaning sinks 711 mm x 711 mm x 172 mm deep [28” x 28” x 6 ¾”], (three sinks for large and medium companies), locate near exterior doors. Provide fire extinguishers in semi-recessed fire extinguisher cabinets to comply with applicable codes.

2-2.2.1.3 Finishes:
Floor: sealed concrete
Base: none
Walls: painted concrete, or painted concrete masonry unit walls separating COF heavy storage areas.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-2.2.1.4 Other requirements: All entry doors into Equipment Maintenance Area shall have auxiliary deadlocks (thumb turn inside, keyed cylinder outside).

2-2.2.2 **Arms Vault (ARMS VAULT)**. Provide one Arms Vault for each company on the first floor. Construction of Arms Vault shall comply with paragraph 5-7.2. Coordinate with the authority having jurisdiction for specific construction requirements.

2-2.2.2.1 Function: Storage and issue of weapons.

2-2.2.2.2 Furnishings/Fixtures/Equipment: The following items will be Contractor furnished and installed: arms rack anchor rings on all walls inside Arms Vault; refer to paragraph 5-7.2. Arms racks are not in contract.

2-2.2.2.3 Finishes:
Floor: sealed concrete
Base: none.
Walls: painted concrete, or painted concrete masonry units.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-2.2.2.4 Other requirements: requirement for dehumidifier.

2-2.2.3 **Unit Storage (UNIT ST)**. Provide one Unit Storage for each company on the first floor. Provide access from Equipment Maintenance Area and from exterior service yard.

2-2.2.3.1 Function: Storage of miscellaneous equipment.

2-2.2.3.2 Furnishings/Fixtures/Equipment: None.

2-2.2.3.3 Finishes:

Floor: sealed concrete
Base: none
Walls: Provide painted concrete masonry units.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-2.2.3.4 Other requirements: Provide a pair of 914 mm wide hollow metal doors opening onto the paved service yard; doors shall have hold open devices with auxiliary deadlocks (thumb turn inside, keyed cylinder outside). Provide historic doors as required. Provide 914 mm [3'-0"] wide swinging door with keyed cylinder lock in wire mesh partition at Equipment Storage.

2-2.3 **COF LIGHT EQUIPMENT STORAGE AREAS.** Provide one group of Light Equipment Storage areas per company consisting of General Storage, NBC Storage, Comm Storage, Fire Control Storage, and TA-50 Gear Storage. COF Light Equipment Storage Areas are required for four medium and one large Company Operations Facilities (COF). Individual TA-50 gear lockers shall be provided: minimum 80 lockers for large COF and 60 lockers for each Medium COF. Each COF Light Equipment storage shall be provided with a Company Identificaton Sign (5 total), see para. 5-8.2.6. Military personnel will staff the facility. Provide the following areas for each company.

2-2.3.1 **General Storage (GEN ST)**. Provide one General Storage for each company located on the second and third floor.

2-2.3.1.1 Function: Storage of soldier and miscellaneous equipment.

2-2.3.1.2 Furnishings/Fixtures/Equipment: None

2-2.3.1.3 Finishes:
Floor: sealed concrete
Base: resilient base
Walls: Provide painted impact resistant gypsum wallboard,
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-2.3.1.4 Other requirements: Provide 914 mm [3'-0"] wide hollow metal door.

2-2.3.2 **Nuclear, Biological and Chemical Equipment Storage (NBC)**. Provide one NBC Storage for each company on the second and third floor.

2-2.3.2.1 Function: Storage of equipment for use in defense of nuclear, biological or chemical warfare.

2-2.3.2.2 Furnishings/Fixtures/Equipment: None.

2-2.3.2.3 Finishes:
Floor: sealed concrete
Base: resilient base
Walls: painted gypsum wallboard.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-2.3.2.4 Other requirements: Provide 914 mm [3'-0"] wide hollow metal door.

2-2.3.3 **Communications Storage (COM ST)**. Provide one Communications Storage for each company on the second and third floor.

2-2.3.3.1 Function: Storage of radios and communications field gear.

2-2.3.3.2 Furnishings/Fixtures/Equipment:

2-2.3.3.3 Finishes:
Floor: sealed concrete
Base: resilient base
Walls: painted gypsum wallboard.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-2.3.3.4 Other requirements: Provide 914 mm [3'-0"] wide hollow metal door.

2-2.3.4 **TA-50 Storage (TA-50)**. Provide one TA-50 Storage for each company located on the second and third floor. Size and configure area to accommodate as many TA-50 locker units per company (allow minimum 2438 mm [8'-0"] clearance between parallel rows of lockers; minimum 914 mm [3'-0"] between open locker doors and obstructions). These quantities shall be verified with the Company Commanders.

2-2.3.4.1 Function: Gear lockers for storage of individual soldier's TA-50 field gear.

2-2.3.4.2 Furnishings/Fixtures/Equipment: The following items will be Contractor furnished and installed: TA-50 gear lockers; lockers size: minimum 559 mm (w) x 914 mm (d) x 1067 mm (h) [22"w x 36"d x 42"h]. Lockers shall be stacked two high.

2-2.3.4.3 Finishes:
Floor: sealed concrete
Base: resilient base.
Walls: provide painted concrete masonry unit walls separating TA-50 Storage from adjacent COF spaces.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-2.3.4.4 Other requirements: Provide a pair of 914 mm [3'-0"] wide hollow metal doors.

2-2.3.5 **Fire Control (FIRE CTL)**. Provide one Fire Control Room for each company on the second and third floor.

2-2.3.5.1 Function:. Storage

2-2.3.5.2 Furnishings/Fixtures/Equipment: None.

2-2.3.5.3 Finishes:
Floor: sealed concrete
Base: resilient base.
Walls: painted gypsum wallboard
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-2.3.5.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-2.3 **BUILDING 355 SUPPORT AREAS**. Only able-bodied personnel will occupy Building 355 support areas; handicapped accessibility is not required, except that stairs and corridors shall comply with handicapped accessibility requirements of applicable codes.

2-2.3.1 **Mechanical Room(s) (MECH)**. Provide dedicated areas for mechanical equipment located on all floors of Building 355. Each company shall have independent operation and control of HVAC system for its own spaces, but mechanical equipment may serve more than one company, and mechanical rooms may be combined. Mechanical rooms shall not be used for storage or other purposes. Access will be limited to authorized personnel. Provide floor openings and vertical shaft spaces as necessary.

2-2.3.1.1 Function: Spaces for HVAC, water heating, and other plumbing and mechanical equipment.

2-2.3.1.2 Furnishings/Fixtures/Equipment: None.

2-2.3.1.3 Finishes: Floor: sealed concrete
Base: resilient cove base
Walls: painted impact resistant gypsum board.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-2.3.1.4 Other requirements: Doors shall have storeroom function lockset master-keyed to existing system.

2-2.3.2 **Electrical Room(s) (ELE)**. Provide dedicated areas for electrical equipment located on all floors of Building 355. Each company shall have independent metering and control of the electrical system for its own spaces, but electrical equipment may serve more than one company, and electrical rooms may be combined. Electrical rooms shall not be used for storage or other purposes. Access will be limited to authorized personnel. Provide floor openings and vertical shaft spaces as necessary.

2-2.3.2.1 Function: Spaces for electrical equipment.

2-2.3.2.2 Furnishings/Fixtures/Equipment: None.

2-2.3.2.3 Finishes: Floor: sealed concrete
Base: resilient cove base
Walls: painted gypsum wallboard or painted concrete masonry units
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-2.3.2.4 Other requirements: Electrical service to buildings shall be underground. Doors shall have storeroom function lockset master-keyed to existing system..

2-2.3.3 **Telecommunication Room (TELE)**. Provide dedicated interior room(s) for communication distribution equipment located on all floors of Building 355. Room(s) shall be dedicated to one company, and shall not be combined with mechanical or electrical rooms. Room(s) may be accessed from Administrative Area Corridor, public unsecure corridor (if provided), or Equipment Maintenance Area. Access will be limited to authorized personnel. Provide each company with one main communication room; minimum size 3048 mm [10'-0"] x 3353 mm [11'-0"]. Provide additional communication rooms as needed; all spaces having telephone or computer data outlets shall be located to allow a maximum cable length of 90 m [295 feet] between outlet and communication room. Minimum dimensions of secondary communication rooms shall be 2134 mm [7;-0"] x 3048 mm [10'-0"]. Provide floor openings and vertical shaft spaces as necessary.

2-2.3.3.1 Function: Telephone and data network support spaces for the COF.

2-2.3.3.2 Furnishings/Fixtures/Equipment: None.

2-2.3.3.3 Finishes: Floor: vinyl composition tile
Base: resilient cove base
Walls: painted gypsum wallboard.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-2.3.3.4 Other requirements: Door shall have minimum 914 mm [3'-0"] wide door with storeroom function lockset master-keyed to existing system..

2-2.3.4 **Existing Sprint Switch Room (EXIST SPRINT SW RM)**. Located on the first floor. Existing dedicated interior room for communication distribution equipment.

2-2.3.4.1 Function: Telephone and data network support spaces for the COF.

2-2.3.4.2 Furnishings/Fixtures/Equipment: None.

2-2.3.4.3 Finishes: Floor: vinyl composition tile
Base: resilient cove base
Walls: .painted concrete masonry units.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-2.3.4.4 Other requirements: Door shall have minimum 914 mm [3'-0"] wide door with storeroom function l master-keyed to existing system.

2-2.3.5 **Exterior Stairs**. Provide as required to allow circulation to upper floor of the building. Comply with applicable code egress requirements. This description covers all Exterior Stairs at for Building 355.

2-2.3.5.1 Function: Circulation and means of egress.

2-2.3.5.2 Furnishings/Fixtures/Equipment (FFE): None.

2-2.3.5.3 Finishes: Landing floor: sealed concrete with slip-resistant finish texture.
Base: exterior wall material
Treads: Sealed concrete with slip-resistant nosing
Risers: sealed concrete
Walls: exterior wall materials
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-2.3.5.4 Other requirements: Stairs shall comply with handicap accessibility requirements of applicable codes. Railing shall be designed in accordance with applicable codes. Refer to Chapter 5 for hardware and security requirements for exterior doors.

2-2.3.6 **Breezeway (BREEZEWAY)**. Occurs on the first floor of Building 355. Refers to an unconditioned, covered corridor space that is enclosed on the long sides, but open to the exterior on the ends. Provide as required to allow circulation to building spaces and comply with applicable code egress requirements.

2-2.3.6.1 Function: Circulation and means of egress.

2-2.3.6.2 Furnishings/Fixtures/Equipment (FFE): Provide mechanical and electrical systems to comply with applicable codes. All fixtures and equipment shall be suitable for exterior locations. The following item shall be Contractor furnished and installed: provide fire extinguishers in semi-recessed fire extinguisher cabinets to comply with applicable codes.

2-2.3.6.3 Finishes:
Floor: sealed concrete
Base: Exterior wall material
Walls: Exterior wall material
Ceiling: painted exterior gypsum soffit board.

2-2.3.6.4 Other requirements: With the exception of fire sprinkler systems, no piping, conduit or ductwork shall be exposed in breezeway. Provide slip resistant finish texture on concrete floor.

**2-2.4 Common Locker/Shower Facilities (COF TOILET/SHOWER)**. Provide one group of men's and one group of women's common locker/shower facilities for each company. Three (3) COF Toilet/Showers shall be provided , one on each floor, in Building 355. Two (2) COF Toilet/Showers shall be

provided on the second floor in Building 357. The COF Toilet/Shower for the Large COF shall be located on the third floor of Building 355.. Quantities of lockers and plumbing fixtures for men and women vary by company size. Provide the quantity of lockers and fixtures for Medium Company Operations Facility on the first and second floor and as indicated in the table below. Provide the quantity of lockers and fixtures for Large Company Operations Facility on the third floor and as indicated in the table below. Soldiers will use locker rooms before and after physical training. Handicapped accessibility is not required. Additional entrances may be provided from a common public corridor in the COF. Entrances shall be separate and distinct from the entrances to company supply and administrative areas. Exterior entrance vestibules shall be provided. Entrances shall provide visual privacy into the spaces.

**Table 2-2.4 Locker Room Plumbing Fixture and Locker Quantities**

| | LARGE COMPANY | | MEDIUM COMPANY | |
|---|---|---|---|---|
| | **MEN** | **WOMEN** | **MEN** | **WOMEN** |
| **Lockers** | 150 | 14 | 82 | 8 |
| **Toilets** | 2 | 2 | 2 | 1 |
| **Urinals** | 2 | - | 1 | - |
| **Lavatories** | 4 | 1 | 2 | 1 |
| **Showers *** | 8 | 2 | 5 | 1 |

2-2.4.1 **Women's Locker Room**. Provide one or more rooms, sized to accommodate the number of lockers and plumbing fixtures required for each company served. Provide exterior entrance(s) with vestibule. For egress purposes, the occupant load shall be equal to the higher of the following numbers: a) the number of lockers in the room, or b) the code determined number of occupants calculated by multiplying room area x the occupant load factor.

2-2.4.1.1 Function: Toilets, showers and lockers for female soldiers.

2-2.4.1.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: floor mounted toilets, wall-hung lavatories, and ceramic tile shower enclosures in the quantities indicated in the table above. Provide toilet partitions at each toilet. Provide the following toilet accessories: one mirror with shelf above each lavatory; one paper towel dispenser/waste receptacle per two lavatories (or fraction thereof); one soap dispenser per lavatory; one sanitary napkin disposal per toilet; one toilet tissue dispenser per toilet; one toilet seat cover dispenser per toilet; one soap holder per shower; one shower curtain and rod at each shower; two double pin robe hooks at each dressing compartment; one robe hook on each toilet partition door; one sanitary napkin and tampon vending machine. Provide 305 mm [1'-0"] of locker room bench per 5 lockers provided. Provide two wall mounted GFCI electric outlets per two lavatories (or fraction thereof); mount adjacent to mirrors. Provide electric water cooler (EWC) at entrance vestibule from exterior. Provide fire extinguishers in semi-recessed fire extinguisher cabinets to comply with applicable codes.

2-2.4.1.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile.
Ceiling: painted water resistant gypsum board.

2-2.4.1.4 Other requirements: Provide 914 mm [3'-0"] wide entry door. Locks shall be as specified in paragraph 5-4.9.5.3.

2-2.4.2 **Men's Locker Room**. Provide one or more rooms, sized to accommodate the number of lockers and plumbing fixtures required for each company served. Provide exterior entrance(s) with vestibule. For egress purposes, the occupant load shall be equal to the higher of the following numbers: a) the number of lockers in the room, or b) the code determined number of occupants calculated by multiplying

room area x the occupant load factor.

2-2.4.2.1 Function: Toilets, showers and lockers for male soldiers.

2-2.4.2.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: floor mounted toilets, wall-hung lavatories, and ceramic tile shower enclosures in the quantities indicated in the table above. Provide toilet partitions at each toilet. Provide the following toilet accessories: one mirror with shelf above each lavatory; one paper towel dispenser/waste receptacle per two lavatories (or fraction thereof); one soap dispenser per lavatory; one toilet tissue dispenser per toilet; one toilet seat cover dispenser per toilet; one soap holder per shower; one shower curtain and rod at each shower; one double pin robe hook outside each shower; one robe hook on each toilet partition door. Provide 305 mm [1'-0"] of locker room bench per 5 lockers provided. Provide two wall mounted GFCI electric outlets per two lavatories (or fraction thereof); mount adjacent to mirrors. Provide electric water cooler (EWC) at entrance vestibule from exterior. Provide fire extinguishers in semi-recessed fire extinguisher cabinets to comply with applicable codes.

2-2.4.2.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile.
Ceiling: painted water resistant gypsum board.

2-2.4.2.4 Other requirements: Provide 914 mm [3'-0"] wide entry door. Locks shall be as specified in paragraph 5-4.9.5.3.

**2-3 BUILDING 355 - GYMNASIUM FUNCTIONAL AND AREA REQUIREMENTS.**

2-3.1 Function: Multi-function space.

2-3.2 Furnishings/Fixtures/Equipment: reuse existing basketball backboards

2-3.3 Minimum Finishes:
Floor: Refinish existing floors and stripe as directed and seal.
Base: none
Walls: paint existing walls-and decorative wall elements; new seismic work cannot cover existing decorative wall elements. Offeror must incorporate eclectic wall features into the seismic wall design and cannot conceal existing Historic features.
Ceiling: apply one-hour fire resistive material to existing metal deck and truss roof structure.

**2-4 BUILDING 356 and 358 - UNACCOMPANIED ENLISTED PERSONNEL HOUSING (UEPH) FACILITIES FUNCTIONAL AND AREA REQUIREMENTS.** The UEPH building(s) shall consist of living units, common areas, and support spaces that will occupy all three floors of Building 356 and 358. Each living unit shall be designed to be occupied by one or two soldiers. Provide 66 Two-person living units and 18 One-person living units to house a total of 150 enlisted personnel. Living units and common areas are equally distributed among three floors in Buildings 356 and 358. Only able-bodied military personnel will occupy UEPH Buildings; handicapped accessibility is not required. Building spaces and areas shall be as follows:

2-4.1 **Areas Comprising the <u>Two-Person Living Unit</u> (1+1 Module)**. Each Two-Person living unit, or module, will contain two individual living/sleeping rooms with closets, and a shared service area with Kitchen, and a shared bathroom. Spaces are as follows.

2-4.1.1 **Individual Living/Sleeping Room (BEDROOM 1/BEDROOM 2)**. Provide two per module.

2-4.1.1.1 Function: Private bedroom and living space for one enlisted person.

2-4.1.1.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: One twin bed with headboard and footboard 102mm x 2083mm [40" x 85"]; one entertainment center for occupant's television and sound system 864mm wide x 635mm deep x 1930mm high [34" x 25" x 76"]; one chest of drawers 712mm wide x 458mm deep x 661mm high [28" x 18" x 26" high]; one nightstand 485mm wide x 435mm deep x 535mm high [19" x 17" x 21" high]; one desk 1524mm wide x 762 deep (with keyboard tray retracted) x 762mm high [60" wide x 30" deep x 30" high]; and one desk chair 500mm wide x 535mm deep x 851mm high [19-1/2" x 21" x 33-1/2" high].

2-4.1.1.3 Minimum Finishes:
Floor: carpet
Base: resilient cove base.
Walls: gypsum wallboard with full-height Sisal Fabric wallcovering.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-4.1.1.4 Other requirements: Living/sleeping room shall have at least one exterior operable window with insect screen. Window shall meet egress requirements of NFPA 101 and Unified Facilities Criteria (UFC) 1-200-01 and International Building Code (IBC) 2000. Window shall not be located adjacent to an exterior corridor or breezeway. Door between service area and living/sleeping room shall have electronic lockset. Door between public corridor and service area shall have electronic lockset. Provide minimum of one combination telephone/data outlet in each Living /Sleeping room. Provide minimum of one cable television outlet in each Living/Sleeping room. Coordinate outlet locations with furniture arrangement. Refer to Chapter 9 Electrical Systems.

2-4.1.2 **Closet (CLOSET)**. Provide one per living/sleeping room.

2-4.1.2.1 Function: Private walk-in closet for clothing and storage of boxes and field gear.

2-4.1.2.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: rod and shelf, as indicated on the RFP Concept Drawings.

2-4.1.2.3 Minimum Finishes:
Floor: vinyl composition tile
Base: resilient cove base
Walls: painted gypsum wallboard
Ceiling: painted gypsum wallboard.

2-4.1.2.4 Other requirements: Door shall have passage function latchset and be equipped with a hasp so the occupant can provide his/her own padlock.

2-4.1.3 **Kitchen (KITCHEN)**. Provide one per module.

2-4.1.3.1 Function: Circulation space, food preparation area, and eating area for occupants.

2-4.1.3.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: one refrigerator-freezer (minimum 9 total cubic feet); one microwave oven (min .9 cubic feet, 800 watts) mounted under wall cabinets.
The following item will be Contractor furnished and installed: minimum 1500 linear mm [5'-0"] of 600mm [2'-0"] deep kitchen base cabinets and countertop (including cooktop/range width), and 2100 linear mm [7'-0"] of 300mm [12"] deep wall cabinets. Wall cabinets shall be minimum 600mm [2'-0"] high; provide 600 mm [2'-

0”] clear between countertop and bottom of wall cabinets at sink. Base cabinets shall have minimum of two 300 mm [12”] wide drawers; provide plastic laminate countertop with integral side and backsplashes at walls. Provide single compartment, stainless steel kitchen sink with food strainer/stopper, minimum inside dimensions 400mm x 400mm x 175mm deep [1’-4” x 1’-4” x 7” deep], with chrome-plated, single handle, washerless mixing faucet (refer to Chapter 8); provide fire extinguisher mounted inside base cabinet. One 4-burner electric cooktop, rangehood with exterior exhaust and garbage disposal shall be priced separately as Option No. 2, see proposal Schedule, Section 00010.

2-4.1.3.3 Minimum Finishes:
Floor: vinyl composition tile
Base: resilient cove base
Walls: painted gypsum wallboard; Wall area between countertop and wall cabinets: plastic laminate.
Ceiling: painted gypsum wallboard.

2-4.1.3.4 Other requirements: Door between public corridor and service area (entry door into module) shall have interlocking threshold.

2-4.1.4 **Bathroom (BATHROOM)**. Provide one per module.

2-4.1.4.1 Function: Bathing and toilet facilities for either occupant; storage for both occupants’ bath articles.

2-4.1.4.2 Furnishings/Fixtures/Equipment (FFE): All the following items listed will be Contractor furnished and installed: Lavatory that shall be minimum 475mm x 475mm [19” x 19”] self-rimming vitreous china, or cast-filled acrylic or solid surfacing material integrally molded to countertop; provide chrome-plated washerless faucet with pop-up drain (refer to Chapter 8); Countertop shall be minimum 900mm [3’-0”] wide cast-filled acrylic, acrylic solid surfacing material, or plastic laminate with integrally molded, 100mm high coved backsplash. Provide 102mm high side splash at side walls. Provide plastic laminate surfaced vanity base cabinet with hinged door(s) and minimum two 225mm [9”] wide drawers. Provide 6mm [1/4”] thick x minimum 1050mm [3’-6”] high mirror glass, full width of vanity countertop, with wall mounted vanity light fixture above mirror (refer to Chapter 9). Provide one recessed medicine cabinet, two soap holders, two toothbrush/tumbler holders. Provide floor mounted toilet with full seat and seat cover (lid). Provide bathtub, chrome-plated brass showerhead, and anti-scald single-handle mixing valve (refer to Chapter 8). Provide two minimum 600mm [2’-0”] long towel bars mounted on walls outside tub/shower enclosure, two wall mounted soap holders in the tub/shower, and one door mounted robe hook with two hooks. Provide wall mounted retractable clothesline across tub/shower. Provide mildew-resistant vinyl shower curtain with stainless steel curtain hooks and chrome-plated brass shower curtain rod. Provide single roll toilet tissue dispenser.

2-4.1.4.3 Minimum Finishes:
Floor: ceramic tile
Base: ceramic tile sanitary cove base
Walls: full height ceramic tile. Walls around shower/tub enclosure shall be full height ceramic tile.
Ceiling: painted water resistant gypsum board.

2-4.1.4.4 Other requirements: HVAC system shall exhaust bathroom air; refer to Chapter 10. Door shall have privacy function lockset.

2-4.2 **Areas Comprising the <u>One-Person Living Unit</u> (Single Unit Module)**. Each One-Person living unit, or module, will contain a living/sleeping room with closet, a service area with Kitchen, and a bathroom. Spaces are as follows.

2-4.2.1 **Living/Sleeping Room (BEDROOM)**. Provide one per module.

2-4.2.1.1 Function: Private bedroom and living space for one senior enlisted person.

2-4.2.1.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: One twin bed with headboard and footboard 102mm x 2083mm [40" x 85"]; one entertainment center for occupant's television and sound system 864mm wide x 635mm deep x 1930mm high [34" x 25" x 76"]; one chest of drawers 712mm wide x 458mm deep x 661mm high [28" x 18" x 26" high]; one nightstand 485mm wide x 435mm deep x 535mm high [19" x 17" x 21" high]; one desk 1524mm wide x 762 deep (with keyboard tray retracted) x 762mm high [60" wide x 30" deep x 30" high]; and one desk chair 500mm wide x 535mm deep x 851mm high [19-1/2" x 21" x 33-1/2" high].

2-4.2.1.3 Minimum Finishes:
Floor: carpet
Base: resilient cove base
Walls: gypsum wallboard with full-height Sisal Fabric wallcovering
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-4.2.1.4 Other requirements: Living/sleeping room shall have at least one exterior operable window with insect screen. Window shall meet egress requirements of NFPA 101 and Unified Facilities Criteria (UFC) 1-200-01 and International Building Code (IBC) 2000. Window shall not be located adjacent to an exterior corridor or breezeway. Provide minimum of one combination telephone/data outlet on in each Living /Sleeping room. Provide minimum of one cable television outlet in each Living/Sleeping room. Coordinate outlet locations with furniture arrangement. Refer to Chapter 9 Electrical Systems.

2-4.2.2 **Closet (CLOSET)**. Provide one per living/sleeping room.

2-4.2.2.1 Function: Private walk-in closet for clothing and storage of boxes and field gear.

2-4.2.2.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: rod and shelf, as indicated on RFP Contract Drawings.

2-4.2.2.3 Minimum Finishes:
Floor: vinyl composition tile
Base: resilient cove base
Walls: painted gypsum wallboard or painted veneer plaster
Ceiling: painted gypsum wallboard.

2-4.2.2.4 Other requirements: Door shall have passage function latchset and be equipped with a hasp so the occupant can provide his/her own padlock.

2-4.2.3 **Kitchen (KITCHEN)**. Provide one per module.

2-4.2.3.1 Function: Circulation space, food preparation area, and eating area for occupant and visitors.

2-4.2.3.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: one refrigerator-freezer (minimum 9 total cubic feet); one microwave oven (min .9 cubic feet, 800 watts) mounted under wall cabinets.
The following item will be Contractor furnished and installed: minimum 1500 linear mm [5'-0"] of 600mm [2'-0"] deep kitchen base cabinets and countertop (including cooktop/range width), and 2100 linear mm [7'-0"] of 300mm [12"] deep wall cabinets. Wall cabinets shall be minimum 600mm [2'-0"] high; provide 600 mm [2'-0"] clear between countertop and bottom of wall cabinets at sink. Base cabinets shall have minimum of two 300 mm [12"] wide drawers; provide plastic laminate countertop with integral side and backsplashes at walls. Provide single compartment, stainless steel kitchen sink with food strainer/stopper, minimum inside dimensions 400mm x 400mm x 175mm deep [1'-4" x 1'-4" x 7" deep], with chrome-plated, single handle, washerless mixing faucet (refer to Chapter 8); provide fire extinguisher mounted inside base cabinet. One 4-burner electric cooktop, rangehood with exterior exhaust and garbage disposal shall be priced separately

as Option No. 2, see proposal Schedule, Section 00010.

2-4.2.3.3 Minimum Finishes:
Floor: vinyl composition tile
Base: resilient cove base
Walls: painted gypsum wallboard; Wall area between countertop and wall cabinets: plastic laminate.
Ceiling: painted gypsum wallboard.

2-4.2.3.4 Other requirements: Door between public corridor and service area (entry door into module) shall have interlocking threshold.

2-4.2.4 **Bathroom (BATHROOM)** . Provide one per module.

2-4.2.4.1 Function: Bathing and toilet facilities for occupant; storage for occupants' bath articles.

2-4.2.4.2 Furnishings/Fixtures/Equipment (FFE): All the following items listed will be Contractor furnished and installed: Lavatory that shall be minimum 475mm x 475mm [19" x 19"] self-rimming vitreous china, or cast-filled acrylic or solid surfacing material integrally molded to countertop; providechrome-plated washerless faucet with pop-up drain (refer to Chapter 8); Countertop shall be minimum 900mm [3'-0"] wide cast-filled acrylic, acrylic solid surfacing material, or plastic laminate with integrally molded, 100mm high coved backsplash. Provide 102mm high side splash at side walls. Provide plastic laminate surfaced vanity base cabinet with hinged door(s) and minimum two 225mm [9"] wide drawers. Provide 6mm [1/4"] thick x minimum 1050mm [3'-6"] high mirror glass, full width of vanity countertop, with wall mounted vanity light fixture above mirror (refer to Chapter 9). Provide one recessed medicine cabinet, two soap holders, two toothbrush/tumbler holders. Provide floor mounted toilet with full seat and seat cover (lid). Provide bathtub, chrome-plated brass showerhead, and anti-scald single-handle mixing valve (refer to Chapter 8). Provide two minimum 600mm [2'-0"] long towel bars mounted on walls outside tub/shower enclosure, two wall mounted soap holders in the tub/shower, and one door mounted robe hook with two hooks. Provide wall mounted retractable clothesline across tub/shower. Provide mildew-resistant vinyl shower curtain with stainless steel curtain hooks and chrome-plated brass shower curtain rod. Provide single roll toilet tissue dispenser.

2-4.2.4.3 Finishes:
Floor: ceramic tile
Base: ceramic tile sanitary cove base
Walls: full height ceramic tile. Walls around shower/tub enclosure shall be full height ceramic tile.
Ceiling: painted water resistant gypsum board.

2-4.2.4.3 Other requirements: HVAC system shall exhaust bathroom air; refer to Chapter 10. Door shall have privacy function lockset.

2-4.3 **BUILDING 356 and 358 UEPH COMMON AREAS**. Common areas will be shared by soldiers. Spaces are as follows:

2-4.3.1 **Entry Lobby**. Provide two per floor. Located across the Lanai from the Game Room.

2-4.3.1.1 Function: Primary entry point into the UEPH facility; waiting area for visitors.

2-4.3.1.2 Furnishings/Fixtures/Equipment: the following items will be Government furnished and installed: four upholstered modular waiting-area seating units with two modular end table units. Seating shall accommodate 6 people.

2-4.3.1.3 Finishes:
Floor: vinyl composition tile.

Base: resilient cove base.
Walls: painted gypsum wallboard.
Ceiling: First and Second Floor ceiling: patch existing exposed ceiling to match existing adjacent and paint.
Third Floor ceiling: Suspended acoustic tile ceiling grid system.

2-4.3.1.4 Other requirements: Provide conduit and junction box for cable television service to wall or ceiling mounted television. Provide telephone outlet for public payphone.

2-4.3.2 **Lounge Area (LOUNGE)**. Provide one area per floor. The Lounge alcove space is open to interior corridor.

2-4.3.2.1 Function: Space for building occupants to relax.

2-4.3.2.2 Furnishings/Fixtures/Equipment: the following items will be Government furnished and installed: minimum of six upholstered modular waiting-area seating units with two modular end table units. Seating shall accommodate 8 people. Provide ceiling or wall mounted television bracket with locking tray. Arrange seating to allow viewing of television (TV is government furnished, government installed). The following item will be Contractor furnished and installed: fire extinguisher in semi-recessed fire extinguisher cabinets to comply with applicable codes.

2-4.3.2.3 Finishes: Match adjacent Interior Corridor.

2-4.3.2.4 Other requirements: Provide conduit and junction box for cable television service to wall or ceiling mounted television. Provide telephone outlet for public payphone.

2-4.3.3 **Game Room (GAME ROOM)**. Provide two per floor. Provide area for vending machines and ice machine-dispensers.

2-4.3.3.1 Function: additional space for building occupants to entertain.

2-4.3.3.2 Furnishings/Fixtures/Equipment: the following items will be Government furnished and installed: one ice cube machine-dispenser designed for hotel ice bucket filling, capable of producing minimum 250 lbs. of regular ice cubes in 24 hours, with 180 lb. storage; one ice machine manufacturer's automatic cleaning system to clean and sanitize the water distribution system of the machine at scheduled intervals; Ice machine shall be Energy Star compliant; four full-size soft drink and snack vending machines. Vending machines will not require plumbing connections. Game machinesThe following item will be Contractor furnished and installed: fire extinguisher in semi-recessed fire extinguisher cabinets to comply with applicable codes.

2-4.3.3.3 Finishes:
Floor: vinyl composition tile.
Base: resilient cove base.
Walls: painted gypsum wallboard,
Ceiling: patch existing exposed ceiling to match existing adjacent and paint..

2-4.3.3.4 Other requirements: Provide a pair of 914 mm [3'-0"] wide entry doors. Provide electrical power to accommodate vending machines, game machines, and to comply with applicable codes.

2-4.3.4 **Men's Toilet (MEN)**. Provide two private toilet rooms per floor. Room shall be accessed from Game Room.

2-4.3.4.1 Function: Men's single-occupant toilet and lavatory.

2-4.3.4.2 Furnishings/Fixtures/Equipment (FFE): the following items will be Contractor furnished and installed: one floor mounted toilet, one wall-hung lavatory, mirror with shelf above lavatory, paper towel dispenser/waste receptacle, soap dispenser, one toilet seat cover dispenser; and toilet tissue dispenser.

2-4.3.4.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile wainscot 1219 mm high with painted water-resistant gypsum board above.
Ceiling: painted gypsum wallboard.

2-4.3.4.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-4.3.5 **Women's Toilet (WOMEN)**. Provide two private toilet rooms per floor. Room shall be accessed from Game Room.

2-4.3.5.1 Function: Women's single-occupant toilet and lavatory.

2-4.3.5.2 Furnishings/Fixtures/Equipment (FFE): the following items will be Contractor furnished and installed: one floor mounted toilet, one wall-hung lavatory, mirror with shelf above lavatory, paper towel dispenser/waste receptacle, soap dispenser, one toilet seat cover dispenser; and toilet tissue dispenser.

2-4.3.5.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile wainscot 1219 mm high with painted water-resistant gypsum board above.
Ceiling: painted gypsum wallboard.

2-4.3.5.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-4.3.6 **Janitor Closet (JAN)**. Provide three per floor.

2-4.3.6.1 Function: Service Sink, and storage of cleaning supplies.

2-4.3.6.2 Furnishings/Fixtures/Equipment: the following items will be Contractor furnished and installed: floor mop sink, mop rack for three mops, and minimum 1829 linear mm of wall mounted stainless steel shelving.

2-4.3.6.3 Finishes:
Floor: vinyl composition tile
Base: resilient cove base.
Walls: painted water-resistant gypsum wallboard, or painted concrete masonry units
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-4.3.6.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-4.3.7 **Laundry Area(s) (LAU)**. Provide one per floor. Provide one clothes washer per 12 soldiers, and one clothes dryers per 8 soldiers (round fractional numbers to the next highest whole number). Provide minimum of one laundry room on each floor of the UEPH facility. Provide minimum five washers and seven dryers in each room.

2-4.3.7.1 Function: Self-service washers and dryers and clothes folding areas for residents.

2-4.3.7.2 Furnishings/Fixtures/Equipment: the following items will be Government furnished and installed: commercial quality clothes washers and dryers (each minimum 2.5 cubic feet capacity), non-coin

operation; Stacked dryers are preferred; Appliances shall be Energy Star compliant; two vandal-resistant waiting chairs per each four washers. The room shall accommodate one wall mounted laundry product vending machine in each laundry room.
The following item will be Contractor furnished and installed: minimum 1800 linear mm [6'-0"] of 600 mm [2'-0"] deep base cabinets and countertops for folding clothes; provide one each service sink.

2-4.3.7.3 Finishes:
Floor: quarry tile
Base: quarry tile
Walls: painted water resistant gypsum wallboard, or painted concrete masonry units
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-4.3.7.4 Other requirements: Conceal utilities from view, but provide easy maintenance access; locate utility connections 914 mm [36"] above finish floor, unless otherwise recommended by manufacturer. Provide one floor drain for every four washers; locate outside of traffic area. Provide venting of dryer exhaust as on RFP Concept Drawings with lint catchment system. Lint catchment system shall be designed to be maintained within the Laundry Room. Partitions around laundry rooms shall extend to underside of floor above. Provide 914 mm [3'-0"] wide door(s) into room.

2-4.4 **BUILDING 356 and 358 UEPH SUPPORT AREAS**. Support areas include circulation spaces such as stairs and corridors, mechanical, electrical, and communications spaces. Spaces are as follows:

2-4.4.1 **Interior Corridor**. Provide as required to allow circulation to building spaces, and comply with applicable code egress requirements. Due to security, climate, and force protection concerns, interior corridors are the preferred means of circulation between living units and other building spaces.

2-4.4.1.1 Function: Circulation and means of egress.

2-5.4.1.2 Furnishings/Fixtures/Equipment (FFE): Provide mechanical and electrical systems to comply with applicable codes. The following items will be Contractor furnished and installed: fire extinguishers in semi-recessed fire extinguisher cabinets to comply with applicable codes.

2-4.4.1.3 Finishes:
Floor: vinyl composition tile
Base: resilient cove base.
Walls: painted finish.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint. Suspended acoustic tile ceiling grid system at Third Floor.

2-5.4.1.4 Other requirements: Handicap accessible.

2-4.4.2 **Exterior Corridor (LANAI).** Refers to an unconditioned, covered circulation space that is enclosed on one long side (adjacent to the building), and has a guardrail on the other side. Allow circulation to building spaces. Exterior corridor shall comply with applicable code egress requirements. Exterior corridors provide link with stairs and other circulation components. Exterior corridors shall not be used to provide access to living units

2-4.4.2.1 Function: Circulation and means of egress.

2-5.4.2.2 Furnishings/Fixtures/Equipment (FFE): Provide mechanical and electrical systems to comply with applicable codes. The following items will be Contractor furnished and installed: fire extinguishers in semi-recessed fire extinguisher cabinets to comply with applicable codes. All fixtures and equipment shall be suitable for exterior locations.

2-4.4.2.3 Finishes:
Floor: sealed concrete
Base: Exterior wall material
Walls: Exterior wall material
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-4.4.2.4 Other requirements: Handicap accessible. With the exception of fire sprinkler systems, no piping, conduit or ductwork shall be exposed in exterior corridor. Provide slip resistant finish texture on concrete floor. Guardrails shall be designed in accordance with applicable codes.

2-4.4.3 **Exterior Stairs**. required to allow circulation to upper floors of the building, and to comply with applicable code egress requirements. This description covers all Exterior Stairs for Building 356 and 358.

2-4.4.3.1 Function: Circulation and means of egress.

2-4.4.3.2 Furnishings/Fixtures/Equipment (FFE):

2-4.4.3.3 Finishes: Landing floor: sealed concrete with slip-resistant finish texture.
Base: Exterior wall material
Treads: Sealed concrete with slip-resistant finish texture. Provide slip-resistant nosing.
Risers: sealed concrete.
Walls: exterior wall materials
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-4.4.3.4 Other requirements: Stairs shall comply with handicap accessibility requirements of applicable codes. Railings shall be designed in accordance with applicable codes. Refer to Chapter 5 for hardware and security requirements for exterior doors.

2-4.4.4 **Mechanical Areas (MECH)**. Provide dedicated interior spaces and exterior areas for plumbing, fire protection, and HVAC equipment. Size and locate rooms to allow equipment removal and maintenance Provide floor openings and vertical shaft spaces as necessary.

2-4.4.4.1 Function: Mechanical support spaces for the UEPH building.

2-4.4.4.2 Furnishings/Fixtures/Equipment: None.

2-4.4.4.3 Finishes:
Floor: sealed concrete
Base: resilient cove base
Walls: painted gypsum wallboard, or painted concrete masonry units
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-4.4.4.4 Other requirements: Locate air intake and exhaust openings to provide optimum indoor air quality. Roof mounted equipment shall not be used. Provide masonry screen walls with lockable metal access gates around outdoor equipment areas (refer to Chapter 3); comply with force protection standards. Doors shall have storeroom function lockset master-keyed to existing system.

2-4.4.5 **Electrical Rooms (ELEC)**. Provide dedicated interior spaces and exterior areas for electrical equipment. Rooms shall allow easy equipment removal and maintenance. Provide floor openings and vertical shaft spaces as necessary.

2-4.4.5.1 Function: Electrical support spaces for the UEPH building.

2-4.4.5.2 Furnishings/Fixtures/Equipment: None.

2-4.4.5.3 Finishes:
Floor: sealed concrete
Base: resilient cove base
Walls: painted gypsum wallboard.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-4.4.5.4 Other requirements: Electrical service to the building shall be underground. Door shall have storeroom function lockset master-keyed to existing system. .

2-4.4.6 **Telecommunication Room (TELE)**. Provide dedicated interior rooms for communication equipment. Rooms shall allow easy equipment removal and maintenance.

2-4.4.6.1 Function: Telephone and data network support spaces for the UEPH building.

2-4.4.6.2 Furnishings/Fixtures/Equipment: As required by Statement of Work.

2-4.4.6.3 Finishes:
Floor: vinyl composition tile
Base: resilient cove base
Walls: painted gypsum wallboard.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-4.4.6.4 Other requirements: Communication service to the building shall be underground. Provide minimum 914 mm [3'-0"] wide door with storeroom function lockset master-keyed to existing system. . Provide floor openings and vertical shaft spaces as necessary. Provide a minimum of three 102 mm [4"] diameter empty conduits between vertically stacked communication rooms.

2-4.4.7 **Utility/Cor (UTIL/COR)**. Provide two areas per floor.

2-4.4.7.1 Function: Space for building utilities

2-4.4.7.2 Furnishings/Fixtures/Equipment: None.

2-4.4.7.3 Finishes:
Floor: vinyl composition tile
Base: resilient cove base
Walls: painted gypsum wallboard.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-4.4.7.4 Other requirements: Provide 914 mm [3'-0"] wide door with storeroom function lockset.

## 2-5 BUILDING 357 - DINING FACILITY FUNCTIONAL AND AREA REQUIREMENTS.

The dining facility for enlisted personnel will employ cafeteria-style service and will be equipped to allow for service of both full menu and short order, fast food types of meals, carry-out and ala carte.

The Dining Facility will be constructed on the ground floor of Building 357. The minimum seat count for the facility is 374 people per seating. The Design-Build Offeror shall verify and adjust room layout to ensure that the minimum number of tables/seats is accounted for. Major functional areas include Dining, Kitchens, serving and sit down dining, dish washing, employee lockers and toilets, food preparation and cooking, garbage and trash disposal, non-provisional storage, patron toilets, office(s), pot and pan washing, receiving platform, refrigerated and dry storage, serving, and signature-head count, cashier station(s), and staging area. Space for entry

canopies for climate control and receiving platforms are included in this project.

Final Dining Facility Design shall be coordinated and approved by The Army Community of Excellence, Subsistence (ACES); The Design-Build offeror should contact Goldie Bailey (tel. 804-734-3354).

2-5.1 **Dining Facility Food Service Areas.** Public areas where food is displayed, purchased, and consumed.

2-5.1.1 **Dining Area (DINING AREA#1, #2,#3, #4, AND #5).** Provide four separate areas as indicated on the first floor Provide one additional dining area on the second floor.

2-5.1.1.1 Function: Dining area for soldiers.

2-5.1.1.2 Furnishings/Fixtures/Equipment: the following items will be Government furnished and installed: tables and seating for a minimum of 300 people. Also, see RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items will be Government or Contractor furnished and installed.

2-5.1.1.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard and painted concrete wall.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.1.1.4 Other requirements: Room shall have exterior window. Provide a pair of historic doors as required. Provide exit devices as required by code.

2-5.1.2 **Beverage/Condiment Area & Salad/Hot Bar(BEVERAGES/CONDIMENTS and Salad/Hot Bar).** Provide one as indicated.

2-5.1.2.1 Function: Food service area for soldiers.

2-5.1.2.2 Furnishings/Fixtures/Equipment: See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.1.2.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: ceramic tile
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.1.3 **Short Order Area, Specialty Cooking, and Service Line (SHORT ORDER, SPECIALTY COOKING, AND SERVICE LINE).** Provide one area per function as indicated.

2-5.1.3.1 Function: Food service area for soldiers.

2-5.1.3.2 Furnishings/Fixtures/Equipment: See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.1.3.3 Finishes:

Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: ceramic tile
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.1.3.4 Other requirements: Room shall have exterior window.

2-5.1.4 **Snack Bar (SNACK BAR).** Provide one as indicated.

2-5.1.4.1 Function: Food service area for soldiers.

2-5.1.4.2 Furnishings/Fixtures/Equipment: See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.1.4.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: ceramic tile
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.1.4.4 Other requirements: Room shall have exterior window. Provide a pair of historic doors as required; door shall have hold open device and entry function lockset.

2-5.1.5 **Snack Storage (SNACK STORAGE).** Provide one as indicated.

2-5.1.5.1 Function: Snack Bar storage.

2-5.1.5.2 Furnishings/Fixtures/Equipment: See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.1.5.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: painted gypsum wallboard
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.1.6 **Check-In (CHECK-IN).** Provide one as indicated.

2-5.1.6.1 Function: Main entry point into the Dining Facility for soldiers and guests. Location of cashier, tray dispenser, and electronic menu board.

2-5.1.6.2 Furnishings/Fixtures/Equipment: See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.1.6.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: painted gypsum wallboard
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.1.6.4 Other requirements: Provide a pair of historic doors as required.

2-5.2 **DINING FACILITY WORK AREAS** Non-Public areas where food preparation, storage, cleaning, and receiving occur.

2-5.2.1 **Dishwash Room (DISHWASH RM).** Provide one as indicated.

2-5.2.1.1 Function: sanitary area for the cleaning of dining dishware and utensils.

2-5.2.1.2 Furnishings/Fixtures/Equipment: See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.2.1.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: ceramic wall tile
Ceiling: suspended fiberglass panel ceiling.

2-5.2.1.4 Other requirements: Room shall have exterior window. Provide a pair of 914 mm [3'-0"] wide hollow metal doors; door shall have hold open device and entry function.

2-5.2.2 **Kitchen and Bakery Preparation (KITCHEN / BAKERY PREP).** Provide one as indicated.

2-5.2.2.1 Function: sanitary area for food preparation.

2-5.2.2.2 Furnishings/Fixtures/Equipment: See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.2.2.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: ceramic tile
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.2.2.4 Other requirements: Room shall have exterior window. Provide a pair of 914 mm [3'-0"] wide hollow metal passage doors to adjoining Short Order area.

2-5.2.3 **Refrigerator/Freezer Space (REFRIGERATOR/FREEZER).** Provide one as indicated.

2-5.2.3.1 Function: Cold storage of food items.

2-5.2.3.2 Furnishings/Fixtures/Equipment: See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.2.3.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: ceramic tile
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.2.4 **Pots & Pan Washing (POT & PAN WASHING).** Provide one as indicated.

2-5.2.4.1 Function: sanitation area for the cleaning of cooking equipment.

2-5.2.4.2 Furnishings/Fixtures/Equipment: See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.2.4.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: ceramic tile
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.2.5 **Pots & Pan Racks (POT & PAN RACKS).** Provide one as indicated.

2-5.2.5.1 Function: storage area for cooking equipment.

2-5.2.5.2 Furnishings/Fixtures/Equipment: See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.2.5.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: ceramic tile
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.2.6 **Dry Storage (DRY STORAGE).** Provide one as indicated.

2-5.2.6.1 Function: storage space

2-5.2.6.2 Furnishings/Fixtures/Equipment: See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.2.6.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: ceramic tile
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.2.6.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-5.2.7 **Field Feeding Storage (FIELD FEEDING STORAGE).** Provide one as indicated.

2-5.2.7.1 Function: storage space

2-5.2.7.2 Furnishings/Fixtures/Equipment: See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.2.7.3 Finishes:
Floor: quarry tile, non-slip finish

Base: quarry tile
Walls: ceramic tile
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.2.7.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-5.2.8 **Ice Machine Room (ICE MACH / COFFEE RM).** Provide one as indicated.

2-5.2.8.1 Function: ice making, beverage, and dessert preparation space.

2-5.2.8.2 Furnishings/Fixtures/Equipment: See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.2.8.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: ceramic tile
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.2.8.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-5.2.9 **Kitchen Work Area Corridors.** Provide as required.

2-5.2.9.1 Function: Provide as required to allow circulation to kitchen spaces, and comply with applicable code egress requirements.

2-5.2.9.2 Furnishings/Fixtures/Equipment: See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.2.9.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: ceramic tile
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.2.10 **Receiving (RECEIVING)** Provide as required.

2-5.2.10.1 Function: area for the receipt and temporary storage of equipment and products.

2-5.2.10.2 Furnishings/Fixtures/Equipment: See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.2.10.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: ceramic tile
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.2.11 **Electric Panel (ELECT PANEL RM).** Provide one dedicated interior space for electrical equipment. Size and locate rooms to allow equipment removal and maintenance. Provide floor openings and vertical shaft spaces as necessary.

2-5.2.11.1 Function: Electrical support spaces for the Dining Facility.

2-5.2.11.2 Furnishings/Fixtures/Equipment: None.
2-5.2.11.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: painted gypsum wallboard
Ceiling: painted underside of structure above

2-5.2.11.4 Other requirements: Electrical service to the building shall be underground. Door shall have storeroom function lockset master-keyed to existing system.

2-5.3 **DINING FACILITY ADMINISTRATION AREAS.** Non-Public areas where offices for the facility management occur.

2-5.3.1 **Manager's Office (MGR OFFICE).** Provide one as indicated. Occupants: 1, and occasional visitors.

2-5.3.1.1 Function: Private office for facility manager.

2-5.3.1.2 Furnishings/Fixtures/Equipment: the following items will be Government furnished and installed: one desk with return, one bookcase, two legal-size four-drawer file cabinets, two side chairs and one desk chair.

2-5.3.1.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: painted gypsum board
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.3.1.4 Other requirements: Provide 914 mm [3'-0"] wide door into room. Exterior window is desirable. Provide One-Way window in wall between Office and Short Order space.

2-5.3.2 **Office (OFFICE).** Provide one as indicated. Occupants: 1, and occasional visitors.

2-5.3.2.1 Function: Private office

2-5.3.2.2 Furnishings/Fixtures/Equipment: the following items will be Government furnished and installed: one desk with return, one bookcase, two legal-size four-drawer file cabinets, two side chairs and one desk chair.

2-5.3.2.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: painted gypsum board
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.3.2.4 Other requirements: Provide 914 mm [3'-0"] wide door into room. Exterior window is desirable.

2-5.3.3 **Vendor Office (VEN OFF).** Provide one as indicated. Occupants: 1, and occasional visitors.

2-5.3.3.1 Function: Private office

2-5.3.3.2 Furnishings/Fixtures/Equipment: the following items will be Government furnished and installed: one desk with return, one bookcase, two legal-size four-drawer file cabinets, two side chairs and one desk chair.

2-5.3.3.3 Finishes:
Floor: quarry tile, non-slip finish
Base: quarry tile
Walls: painted gypsum board
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.3.3.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-5.3.4 **Men's Staff Toilet (STAFF TOILET)**. Provide one toilet room. Room shall be sized to comply with handicap accessibility requirements. Provide the quantity of lockers and plumbing fixtures as indicated in the table below.

**Table 2-5.3.4 Locker Room Plumbing Fixture and Locker Quantities**

| | STAFF TOILET | |
|---|---|---|
| | **MEN** | **WOMEN** |
| **Lockers** | 10 | 10 |
| **Toilets** | 1 | 2 |
| **Urinals** | 1 | - |
| **Lavatories** | 2 | 2 |

2-5.3.4.1 Function: Men's single-occupant toilet and lavatory, for use by staff.

2-5.3.4.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: floor mounted toilets and wall-hung lavatories; toilet partitions at each toilet; the following toilet accessories: one mirror with shelf above each lavatory; one paper towel dispenser/waste receptacle per two lavatories (or fraction thereof); one soap dispenser per lavatory; one toilet tissue dispenser per toilet; one toilet seat cover dispenser per toilet, robe hook on each toilet partition door; and toilet seat cover dispenser per compartment.

2-5.3.4.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile.
Ceiling: painted gypsum wallboard.

2-5.3.4.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-5.3.5 **Women's Staff Toilet (STAFF TOILET)**. Provide one toilet room. Room shall be sized to comply with handicap accessibility requirements. Provide the quantity of lockers and plumbing fixtures as indicated in table 2-6.3.4.

2-5.3.5.1 Function: Women's single-occupant toilet and lavatory, for use by staff.

2-5.3.5.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: floor mounted toilets and wall-hung lavatories; toilet partitions at each toilet; the following toilet accessories: one mirror with shelf above each lavatory; one paper towel dispenser/waste receptacle per two lavatories (or fraction thereof); one soap dispenser per lavatory; one toilet tissue dispenser per toilet; one toilet seat cover dispenser per toilet, robe hook on each toilet partition door; and toilet seat cover dispenser per compartment.

2-5.3.5.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile.
Ceiling: painted gypsum wallboard.

2-5.3.5.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-5.4 **DINING FACILITY SUPPORT AREAS** . Support areas include circulation spaces such as stairs and corridors; mechanical, electrical, storage, and communications spaces. Spaces are as follows:

2-5.4.1 **Can Wash (CAN WASH)**. Provide one as indicated

2-5.4.1.1 Function: sanitation area for food products.

2-5.4.1.2 Furnishings/Fixtures/Equipment (FFE): See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.4.1.3 Finishes:
Floor: concrete with hardener and sealer.
Base: none.
Walls: exterior wall material
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.4.2 **Comp. Room (COMP RM)**. Provide one as indicated

2-5.4.2.1 Function: mechanical space for refrigerator and freezer conditioning units.

2-5.4.2.2 Furnishings/Fixtures/Equipment (FFE): See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.4.2.3 Finishes:
Floor: concrete with hardener and sealer.
Base: none.
Walls: painted concrete masonry units
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.4.3.4 Other requirements: Provide pair of 914 mm [3'-0"] wide entry doors.

2-5.4.3 **Extractor Room (EXTRACTOR RM)**. Provide one as indicated

2-5.4.3.1 Function: mechanical space.

2-5.4.3.2 Furnishings/Fixtures/Equipment (FFE): See RFP Concept Design Drawings-Food Service Equipment Schedule sheet nos. K-1 through K-8, in conjunction with the Food Service Equipment List referenced in Attachment 12 to determine which items are Government or Contractor furnished and installed.

2-5.4.3.3 Finishes:
Floor: concrete with hardener and sealer.
Base: none.
Walls: painted concrete masonry units

Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.4.3.4 Other requirements: Provide pair of 914 mm [3'-0"] wide entry doors.

2-5.4.4 **Loading Dock (LOADING DECK)**

2-5.4.4.1 Function: area for the delivery of equipment and food products.

2-5.4.4.2 Furnishings/Fixtures/Equipment (FFE): None.

2-5.4.4.3 Finishes:
Floor: concrete with hardener and sealer.
Base: none.
Walls: painted concrete masonry units
Ceiling: painted underside of structure.

2-5.4.5 **Hand Wash (HAND WASH).** Area for Dining Facility customers to sanitize themselves before entering the Check-In area of the Dining Facility.

2-5.4.5.1 Function: wash area for Dining Facility customers.

2-5.4.5.2 Furnishings/Fixtures/Equipment (FFE): Provide mechanical systems to comply with applicable codes. The following items will be Contractor furnished and installed: wall-hung hand wash sink (8 stations total)

2-5.4.5.3 Finishes:
Floor: sealed concrete
Base: Exterior wall material on concrete masonry unit.
Walls: Exterior wall material on concrete masonry unit.
Ceiling: Provide painted covered roof structure

2-5.5 **SUPPORT AREAS**. Support areas include circulation spaces such as stairs and corridors; mechanical, electrical, and communication spaces; restroom facilities. Spaces are as follows:

2-5.5.1 **Exterior Corridor.** Refers to an unconditioned, covered circulation space that is enclosed on one long side (adjacent to the building), and has a guardrail on the other side. Provide as required to allow circulation to building spaces and comply with applicable code egress requirements. Exterior corridors provide link to stairs and other circulation components.

2-5.5.1.1 Function: Circulation and means of egress.

2-5.5.1.2 Furnishings/Fixtures/Equipment (FFE): Provide mechanical and electrical systems to comply with applicable codes. Provide fire extinguishers in semi-recessed fire extinguisher cabinets to comply with applicable codes. All fixtures and equipment shall be suitable for exterior locations.

2-5.5.1.3 Finishes:
Floor: sealed concrete
Base: Exterior wall material
Walls: Exterior wall material
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.5.1.4 Other requirements: Handicap accessible. With the exception of fire sprinkler systems, no piping, conduit or ductwork shall be exposed in exterior corridor. Provide slip resistant finish texture on concrete floor. Guardrails shall be designed in accordance with applicable codes.

2-5.5.2 **Exterior Stairs**. Provide as required to allow circulation to upper floors of the building. Stairs shall comply with applicable code egress requirements. This description covers all Exterior Stairs at for Building 357.

2-5.5.2.1 Function: Circulation and means of egress.

2-5.5.2.2 Furnishings/Fixtures/Equipment (FFE):

2-5.5.2.3 Finishes: Landing floor: sealed concrete with slip-resistant finish texture.
Base: exterior wall material
Treads: Sealed concrete with slip-resistant finish texture. Provide slip-resistant nosing.
Risers: sealed concrete.
Walls: exterior wall materials
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.5.2.4 Other requirements: Stairs shall comply with handicap accessibility requirements of applicable codes. Railings shall be designed in accordance with applicable codes. Refer to Chapter 5 for hardware and security requirements for exterior doors.

2-5.5.3 **Mechanical Areas (MECH)**. Provide dedicated interior spaces and exterior areas for plumbing, fire protection, and HVAC equipment. Room shall allow easy equipment removal and maintenance Provide floor openings and vertical shaft spaces as necessary.

2-5.5.3.1 Function: Mechanical support spaces for the UEPH building.

2-5.5.3.2 Furnishings/Fixtures/Equipment: None.

2-5.5.3.3 Finishes:
Floor: sealed concrete
Base: resilient cove base
Walls: painted gypsum wallboard or painted concrete masonry units
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.5.3.4 Other requirements: Locate air intake and exhaust openings to provide optimum indoor air quality. Roof mounted equipment shall not be used. Provide masonry screen walls with lockable metal access gates around outdoor equipment areas (refer to Chapter 3); comply with force protection standards. Doors shall have storeroom function locksets master-keyed to existing systems.

2-5.5.4 **Electrical Rooms (ELEC)**. Provide dedicated interior spaces and exterior areas for electrical equipment. Allow equipment removal and maintenance. Provide floor openings and vertical shaft spaces as necessary.

2-5.5.4.1 Function: Electrical support spaces for the UEPH building.

2-5.5.4.2 Furnishings/Fixtures/Equipment: None.

2-5.5.4.3 Finishes:
Floor: sealed concrete
Base: resilient cove base
Walls: painted gypsum wallboard or painted concrete masonry units
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.5.4.4 Other requirements: Electrical service to the building shall be underground. Door shall have storeroom function lockset master-keyed to existing systems..

2-5.5.5 **Telecommunication Room (TELE)**. Provide dedicated interior rooms for communication equipment. Room shall allow easy equipment removal and maintenance. Provide minimum of two communication room per floor.

2-5.5.5.1 Function: Telephone and data network support spaces for the UEPH building.

2-5.5.5.2 Furnishings/Fixtures/Equipment: None.

2-5.5.5.3 Finishes:
Floor: vinyl composition tile
Base: resilient cove base
Walls: painted gypsum wallboard, or painted concrete masonry units
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-5.5.5.4 Other requirements: Communication service to the building shall be underground. Provide minimum 914 mm [3'-0"] wide door with storeroom function lockset master-keyed to existing systems.. Provide floor openings and vertical shaft spaces as necessary. Provide a minimum of three 102 mm [4"] diameter empty conduits between vertically stacked communication rooms.

2-5.5.6 **Men's Public Toilet (MEN)**. Provide one toilet room on the ground floor. Room shall be sized to comply with handicap accessibility requirements. Provide the quantity of plumbing fixtures as indicated in table 2-6.5.6.

**Table 2-5.5.6 Toilet Room Plumbing Fixture Quantities**

| | PUBLIC TOILET | |
|---|---|---|
| | **MEN** | **WOMEN** |
| **Toilets** | 2 | 3 |
| **Urinals** | 1 | - |
| **Lavatories** | 3 | 3 |

2-5.5.6.1 Function: Men's single-occupant toilet and lavatory, for use by staff and visitors.

2-5.5.6.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: floor mounted toilets and wall-hung lavatories; toilet partitions at each toilet; the following toilet accessories: one mirror with shelf above each lavatory; one paper towel dispenser/waste receptacle per two lavatories (or fraction thereof); one soap dispenser per lavatory; one toilet tissue dispenser per toilet; one toilet seat cover dispenser per toilet, robe hook on each toilet partition door; and toilet seat cover dispenser per compartment.

2-5.5.6.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile.
Ceiling: painted gypsum wallboard.

2-5.5.6.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-5.5.7 **Women's Public Toilet (WOMEN)**. Provide one toilet room on the ground floor. Room shall be sized to comply with handicap accessibility requirements. Provide the quantity of plumbing fixtures as indicated in table 2-6.5.6.

2-5.5.7.1 Function: Women's single-occupant toilet and lavatory, for use by staff and visitors.

2-5.5.7.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: floor mounted toilets and wall-hung lavatories; toilet partitions at each toilet; the following toilet accessories: one mirror with shelf above each lavatory; one paper towel dispenser/waste receptacle per two lavatories (or fraction thereof); one soap dispenser per lavatory; one toilet tissue dispenser per toilet; one toilet seat cover dispenser per toilet, robe hook on each toilet partition door; and toilet seat cover dispenser per compartment.

2-5.5.7.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile.
Ceiling: painted gypsum wallboard.

2-5.5.7.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

**2-6 BUILDING 357 - SOLDIER SERVICES FUNCTIONAL AND AREA REQUIREMENTS**. Soldier services occur on the second floor of Building 357. Soldier services are unrelated to other battalion administration functions.

2-6.1 **SOLDIER SUPPORT SERVICES.** Spaces covered under this paragraph shall be made accessible for handicapped persons in accordance with Chapter 5, paragraph 5-9.

2-6.1.1 **Chaplain (CHAP)**. Provide four on the second floor. Occupants: 1, and visitors.

2-6.1.1.1 Function: Private office for Chaplain and visitors.

2-6.1.1.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: one desk with return, one bookcase, four side chairs, and one desk chair.

2-6.1.1.3 Finishes:
Floor: carpet
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-6.1.1.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-6.1.2 **Chaplain's Assistant (ASST CHAP)**. Provide four on the second floor. Occupants: 1, and visitors.

2-6.1.2.1 Function: Private office for Chaplain's Assistant and visitors.

2-6.1.2.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: one desk with return, one bookcase, two side chairs, and one desk chair.

2-6.1.2.3 Finishes:
Floor: carpet
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-6.1.2.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-6.1.3 **Chaplain Waiting (WAITING)**. Provide as indicated on the second floor.

2-6.1.3.1 Function: waiting area for visitors to Chaplain services.

2-6.1.3.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: eight side chairs, two end tables, and magazine rack.

2-6.1.3.3 Finishes:
Floor: carpet
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-6.1.4 **Toilet (TOILET)**. Provide as indicated on the second floor. Occupants: 1, and visitors.

2-6.1.4.1 Function: single-occupant toilet and lavatory, for use by staff.

2-6.1.4.2 Furnishings/Fixtures/Equipment: The following items will be Contractor furnished and installed: floor mounted toilet and wall-hung lavatory; the following toilet accessories: one mirror with shelf; one paper towel dispenser/waste receptacle; one soap dispenser; one toilet tissue dispenser; one toilet seat cover dispenser, robe hook on door; and toilet seat cover dispenser.

2-6.1.4.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile wainscot 1219 mm high with painted water-resistant gypsum board above.
Ceiling: painted gypsum wallboard.

2-6.1.4.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-6.1.5 **Legal Office (LEGAL).** Provide four on the second floor.

2-6.1.5.1 Function: Private office.

2-6.1.5.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: one desk with return, one bookcase, two legal-size four-drawer file cabinets, one side chair and one desk chair.

2-6.1.5.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-6.1.5.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-6.1.3 **Legal Waiting (WAITING)**. Provide as indicated on the second floor.

2-6.1.3.1 Function: waiting area for visitors to Chaplain services.

2-6.1.3.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed:

eight side chairs, two end tables, and magazine rack.

2-6.1.3.3 Finishes:
Floor: carpet
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-6.2 **TROOP AID STATION.** Spaces covered under this paragraph, with the exception of Storage Spaces shall be made accessible for handicapped persons in accordance with Chapter 5, paragraph 5-9.

2-6.2.1 **Medical Office (Med Office)**

2-6.2.1.1 Function: open office area.

2-6.2.1.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: four desks with return, four bookcase, four legal-size four-drawer file cabinets, eight side chair and four desk chairs.

2-6.2.1.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-6.2.1.4 Other requirements: Provide historic doors as required. Room shall have exterior window.

2-6.2.2 **Doctor's Office (DR. OFF.)**

2-6.2.2.1 Function: Private office.

2-6.2.2.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: one desk with return, one bookcase, two legal-size four-drawer file cabinets, one side chair and one desk chair.

2-6.2.2.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-6.2.2.4 Other requirements: Provide 914 mm [3'-0"] wide door into room. Room shall have exterior window.

2-6.2.3 **Non-Commissioned Officer In Charge (NCOIC)**

2-6.2.3.1 Function: Private office.

2-6.2.3.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: one desk with return, one bookcase, two legal-size four-drawer file cabinets, one side chair and one desk chair.

2-6.2.3.3 Finishes:

Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-6.2.3.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-6.2.4 **Physician's Assistant (PHY ASST)**

2-6.2.4.1 Function: Private office.

2-6.2.4.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: one desk with return, one bookcase, two legal-size four-drawer file cabinets, one side chair and one desk chair.

2-6.2.4.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-6.2.4.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-6.2.5 **Working Storage (WORKING STOR)**

2-6.2.5.1 Function: Storage space.

2-6.2.5.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: portable shelving.

2-6.2.5.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-6.2.5.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-6.2.6 **Deployment Storage (DEPLOY STOR)**

2-6.2.6.1 Function: Storage space.

2-6.2.6.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: portable shelving.

2-6.2.6.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-6.2.6.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-6.3 **SOLDIER COMMUNITY FUNCTIONS.** Soldier Community areas are social gathering and recreational spaces. It includes functions like mail boxes, kitchen, and office space. These areas provide a place for relaxation and social interaction in an informal setting. Spaces covered under this paragraph, with the exception of office, front desk, mailroom, janitor's closet, and storage rooms, shall be made accessible for handicapped persons in accordance with Chapter 5, paragraph 5-9.

2-6.3.1 **Activity (ACTIVITY)** Provide one on the second floor.

2-6.3.1.1 Function: Soldier entertainment area.

2-6.3.1.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: seating for up to 25 occupants, game machines, and billiard table.

2-6.3.1.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-6.3.1.4 Other requirements: Provide 914 mm [3'-0"] wide doors into room.

2-6.3.2 **Sitting Room (SITTING RM)** Provide one on the second floor.

2-6.3.2.1 Function: entertainment area for Soldiers' and visitors.

2-6.3.2.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: seating for up to 25 occupants.

2-6.3.2.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-6.3.2.4 Other requirements: Provide 1829 mm [6'-0"] wide doors into room.

2-6.3.3 **TV Lounge (TV LOUNGE)** Provide one on the second floor.

2-6.3.3.1 Function: entertainment area for Soldiers' and visitors.

2-6.3.3.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: seating for up to 25 occupants, large screen television, videotape and DVD player.

2-6.3.3.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-6.3.3.4 Other requirements:

2-6.3.4 **Kitchen (KITCHEN)** Provide one on the second floor.

2-6.3.4.1 Function: Soldier cooking area.

2-6.3.4.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: one refrigerator-freezer (minimum 9 total cubic feet); one microwave oven (min .9 cubic feet, 800 watts) mounted under wall cabinets; one dining table for two persons, 750mm square x 725mm high [30" x 28-1/2" high] with two armless dining chairs; one 4-burner electric range with self-cleaning oven.
The following items will be Contractor furnished and installed: ; one range hood with exterior exhaust; provide 600mm [2'-0"] deep kitchen base cabinets and countertop in the amount as indicated on the Concept Design Drawing , and 3658 linear mm [12'-0"] of 300mm [12"] deep wall cabinets at interior wall. Wall cabinets shall be minimum 600mm [2'-0"] high; provide 600 mm [2'-0"] clear between countertop and bottom of wall cabinets. Base cabinets shall have minimum of two 300 mm [12"] wide drawers. Provide plastic laminate countertop with intergral side and backsplashes at walls. Provide single compartment, stainless steel kitchen sink with food strainer/stopper, minimum inside dimensions 400mm x 400mm x 175mm deep [1'-4" x 1'-4" x 7" deep], with chrome-plated, single handle, washerless mixing faucet (refer to Chapter 8). Provide fire extinguisher mounted above base cabinet.

2-6.3.4.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-6.3.4.4 Other requirements: Provide 914 mm [3'-0"] wide doors into room.

2-6.3.5 **Vending Area (VENDING).** Provide minimum one area on the second floor..

2-6.3.5.1 Function: Space for soft drink and snack vending machines, and ice machine-dispenser.

2-6.3.5.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: one ice cube machine-dispenser designed for hotel ice bucket filling, capable of producing minimum 250 lbs. of regular ice cubes in 24 hours, with 180 lb. Storage; ice machine manufacturer's automatic cleaning system to clean and sanitize the water distribution system of the machine at scheduled intervals. Ice machine shall be Energy Star compliant; four full-size soft drink and snack vending machines. Vending machines will not require plumbing connections.

2-6.3.5.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-6.3.5.4 Other requirements: Provide electrical power to accommodate vending machines and to comply with applicable codes.

2-6.3.6 **Office (OFFICE)**. Provide one on the second floor. Room shall be accessed through the Front Desk. Occupants: 1

2-6.3.6.1 Function: Private office for manager.

2-6.3.6.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: one desk with return, one bookcase, two legal-size four-drawer file cabinets, two side chairs and one desk chair.

2-6.3.6.3 Finishes:
Floor: carpet

Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-6.3.6.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-6.3.7 **Front Desk (FRONT DESK)**. Provide one on the second floor. Occupants: 1, and occasional visitors.

2-6.3.7.1 Function: Visual Control of entrances, exits, and Soldier Community Functional Areas.

2-6.3.7.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: one legal-size four-drawer file cabinets, one desk chair. The following items will be Contractor furnished and installed: Provide counter (built-in casework), per Concept Design Drawings, separating the Front Desk from the Sitting Room Corridor. The counter on the corridor side shall be minimum 1016 mm [3'-4"] high x 305 mm [12"] deep. The counter on the Front Desk side shall be minimum 762 mm [2'-6"] high x 610 mm [2'-0"] deep. The desk shall accommodate computer and monitor (not in contract), and writing area. Provide task lighting at all writing surfaces. Provide built-in communication and power receptacles or grommets in desk top to access wall receptacles. Desk shall have knee space and minimum two cabinets with hinged doors, and two drawers. Drawers and cabinets shall have keyed locks. Desk components shall have plastic laminate countertop, drawer, and door fronts.

2-6.3.7.3 Finishes:
Floor: carpet
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-6.3.7.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-6.3.8 **Public Telephone Area (PHONES)**. Provide one on the second floor.

2-6.3.8.1 Function: Pay telephones for barracks occupants and visitors.

2-6.3.8.2 Furnishings/Fixtures/Equipment: The following items will be Contractor furnished and installed: three pay telephones and telephone stations. Offeror shall contract with local telephone company or other telephone service provider to furnish and install pay telephones; rate charged for calls shall not exceed the average prevailing rate in the local off-post community. Each station will have divider panels to enhance acoustical privacy. Provide built-in seating at two stations; third station shall be wheelchair accessible. Provide capability to mount portable TDD at one station. Materials shall be vandal resistant and easily cleaned.

2-6.3.8.3 Finishes: Match Sitting Room.

2-6.3.8.4 Other requirements: Handicap accessible.

2-6.3.9 **Mail Room (MAIL ROOM)**. Provide one on the second floor. Room shall be sized to allow access to all rear-loading mailboxes and parcel lockers. Provide minimum 1829 mm [6'-0"] clear between back of mailboxes and any obstructions. To comply with force protection minimum standards, avoid routing key utilities (including communications, fire detection and alarm, water mains, etc.) through or on common walls to mail room.

2-6.3.9.1 Function: Secure area for sorting incoming mail and distributing to rear-loading mailboxes.

2-6.3.9.2 Furnishings/Fixtures/Equipment: The following items will be Contractor furnished and installed: Provide plastic laminate-faced sorting counter (built-in casework) 762 mm [2'-6"] deep x 914 mm [3'-0"] high and length as indicated on Concept Design Drawings. Provide United States Postal Service approved mailbox for each resident of the facility. Provide minimum of nine parcel lockers, and one outgoing mail collection box.

2-6.3.9.3 Finishes:
Floor: vinyl composition tile
Base: resilient cove base
Walls: painted gypsum wallboard
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-6.3.9.4 Other requirements: Provide 914 mm [3'-0"] wide door into room. Room shall be handicap accessible. Design shall comply with United States Postal Service regulations.

2-6.3.10 **Common Toilet (T)**. Provide two toilet rooms on the second floor within the Soldier Community space. Room shall be sized to comply with handicap accessibility requirements.

2-6.3.10.1 Function: Men's single-occupant toilet and lavatory, for use by staff and visitors.

2-6.3.10.2 Furnishings/Fixtures/Equipment (FFE): the following items will be Contractor furnished and installed: Provide floor mounted toilets and wall-hung lavatories. Provide toilet partitions at each toilet. Provide the following toilet accessories: one mirror with shelf above each lavatory; one paper towel dispenser/waste receptacle per two lavatories (or fraction thereof); one soap dispenser per lavatory; one toilet tissue dispenser; one toilet seat cover dispenser per toilet, robe hook on each toilet partition door.

2-6.3.10.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile wainscot 1219 mm high with painted water-resistant gypsum board above.
Ceiling: painted gypsum wallboard.

2-6.3.10.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-6.3.11 **Janitor Closet (JAN)**. Provide one on the third floor. Room shall be accessed from Sitting Room.

2-6.3.11.1 Function: Sink and storage of cleaning supplies, soap, and paper products.

2-6.3.11.2 Furnishings/Fixtures/Equipment (FFE): Provide one floor mounted mop sink, mop rack for three mops, and minimum 1524 linear mm of wall mounted stainless steel shelving.

2-6.3.11.3 Finishes:
Floor: vinyl composition tile
Base: resilient cove base
Walls: painted water-resistant gypsum wallboard
Ceiling: painted gypsum wallboard

2-6.3.12 **Storage (ST)**. Provide one on the second floor. Room shall be accessed from Sitting Room.

2-6.3.12.1 Function: storage.

2-6.3.12.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Government furnished and installed: portable shelving.

2-6.3.12.3 Finishes:
Floor: vinyl composition tile
Base: resilient cove base
Walls: painted gypsum wallboard
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-6.4 **Classroom Areas**. Provide one group of classrooms on the second and third floor of Building 357. Classrooms will be accessed from the exterior corridor (Lanai).

2-6.4.1 **Classroom (CLASSROOM)**. Each classroom allows direct access from the exterior corridor (Lanai), and direct egress out of the building.

2-6.4.1.1 Function: Soldier training and other meetings.

2-6.4.1.2 Furnishings/Fixtures/Equipment: None.

2-6.4.1.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-6.4.1.4 Other requirements: Provide pair of 914 mm [3'-0"] wide Historic doors as required.

**2-7 BUILDING 357 - BATTALION HEADQUARTERS (HQ) FUNCTIONAL AND AREA REQUIREMENTS.** One Large Battalion HQ is located on the third floor of Building 357. The Battalion HQ shall consist of administrative areas, classrooms, and support spaces. A portion of the Battalion HQ functions will occur on the second floor of Building 357; specifically, they are the soldier support services (chaplain and legal) areas, and troop aid station. One elevator is required for Building 357. Mechanical and electrical systems must provide the battalion with independent operation and control.

Leadership and staff will manage the organization, receive visitors, and conduct the business of the battalion from the administrative areas (Command section, S-1, S-2, S-3, and S-4). Soldiers will visit the facility to conduct administrative business, or attend training classes. Military personnel will staff the facility; military and non-military personnel will visit the facility to meet with leadership or attend meetings. Although only able-bodied military personnel will be on staff, all spaces except shower rooms, and utility areas (janitor closets, mechanical, electrical, communication, and elevator machine rooms) shall comply with handicapped accessibility requirements, see Chapter 5, paragraph 5-9. Functions and areas are as follows:

2-7.1 **Command Section**. Provide one group of offices on the third floor, with accompanying administration area and reception area.

2-7.1.1 **Commanding Officer (CO)**. Provide one on the third floor. Occupants: 1, and occasional visitors.

2-7.1.1.1 Function: Private office for battalion commanding officer.

2-7.1.1.2 Furnishings/Fixtures/Equipment: The following items shall Government furnished and installed: one desk, one credenza, one bookcase, two legal-size four-drawer file cabinets, one conference table, six side chairs, and one desk chair.

2-7.1.1.3 Finishes:

Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.1.1.4 Other requirements: Provide 914 mm [3'-0"] wide door into room. Room shall have exterior window.

2-7.1.2 **Executive Officer (XO)**. Provide one on the third floor. Occupants: 1, and occasional visitors.

2-7.1.2.1 Function: Private office for battalion executive officer.

2-7.1.2.2 Furnishings/Fixtures/Equipment: The following items shall Government furnished and installed: one desk with return, one bookcase, two legal-size four-drawer file cabinets, one side chair, and one desk chair.

2-7.1.2.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.1.2.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-7.1.3 **Command Sergeant Major (CSM)**. Provide one on the third floor. Occupants: 1, and occasional visitors.

2-7.1.3.1 Function: Private office for battalion command sergeant major.

2-7.1.3.2 Furnishings/Fixtures/Equipment: The following items shall Government furnished and installed: one desk with return, one bookcase, two legal-size four-drawer file cabinets, one side chair, and one desk chair.

2-7.1.3.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.1.3.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-7.1.4 **Duty Officer (DUTY OFF)**. Provide one on the third floor. Occupants: 1.

2-7.1.4.1 Function: Duty Officer will provide physical security of the building, and visual control of the entrances and lobby, as well as functioning as an information source for visitors.

2-7.1.4.2 Furnishings/Fixtures/Equipment: The following items shall Government furnished and installed: one desk with return, one legal-size four-drawer file cabinet, one side chair, and one desk chair.

2-7.1.4.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.1.4.4 Other requirements: Provide 914 mm [3'-0"] wide door into room; door shall have glass vision panel.

2-7.1.5 **Message Mail Center (MESS CTR)**. Provide one on the third floor.

2-7.1.5.1 Function: Mail sorting.

2-7.1.5.2 Furnishings/Fixtures/Equipment: The following item will be Contractor furnished and installed: counter (built-in casework), as indicated in the Concept Design Drawings, separating the Message Mail Center from the corridor. The counter on the corridor side shall be minimum 1524 mm [5'-0"] wide x 1016 mm [3'-4"] high x 305 mm [12"] deep; provide locking overhead roll-down door to secure the opening when unattended; roll-down door hood shall not be visible from corridor side. Counter material shall be plastic laminate

2-7.1.5.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.1.5.4 Other requirements: Provide 914 mm [3'-0"] wide door into room; door shall have entry function lockset and glass vision panel.

2-7.1.6 **Reception (RECEPT)**. Provide one on the third floor. Accommodates reception desk and waiting area.

2-7.1.6.1 Function: Control area for visitors

2-7.1.6.2 Furnishings/Fixtures/Equipment: The following items will be Contractor furnished and installed: Provide counter (built-in casework), as indicated in the Concept Design Drawings, separating the reception area from the control/waiting area. The counter on the corridor side shall be minimum 1524 mm [5'-0"] wide x 1016 mm [3'-4"] high x 305 mm [12"] deep; the counter on the Reception side shall be minimum 762 mm [2'-6"] high x 610 mm [2'-0"] deep. The desk shall accommodate computer and monitor (not in contract), and writing area. Provide built-in communication and power receptacles or grommets in desk top to access wall receptacles. Desk shall have knee space and minimum two cabinets with hinged doors, and two drawers. Drawers and cabinets shall have keyed locks. Desk components shall have plastic laminate countertop, drawer, and door fronts.

2-7.1.6.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.1.6.4 Other requirements: Provide 914 mm [3'-0"] wide door into room; door shall have entry function lockset and glass vision panel.

2-7.1.7 **Conference Room (CONF RM)**. Provide two on the third floor. Room shall be located to allow direct access from the Command Section/S-1 Section and CO Office. The conference rooms shall be divided by operable panel partitions and provided with appropriate entrances and exits to allow two rooms to be combined for use as one large classroom. Occupants: up to 26 persons.

2-7.1.7.1 Function: Conference room for battalion leadership, staff, and visitors. Functions will include staff meetings, hearings, disciplinary sessions, and training.

2-7.1.7.2 Furnishings/Fixtures/Equipment: the following items will be Government furnished and installed: conference table and seating for up to 26 persons. Provide one marker board (minimum 2438 mm wide x 1219 mm high [8'-0" x 4'-0"]). The following item will be Contractor furnished and installed: recessed ceiling mounted, motorized projection screen; 2438 mm wide [8'-0"]; operable partition.

2-7.1.7.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.1.7.4 Other requirements: Provide 914 mm [3'-0"] wide doors into room.

2-7.1.8 **Coffee Area (COFFEE)**. Provide one on the third floor. Area shall have countertop with kitchen sink; comply with handicap accessibility requirements.

2-7.1.8.1 Function: Sink and space for coffee maker and supplies; for use by command section staff and visitors.

2-7.1.8.2 Furnishings/Fixtures/Equipment (FFE): the following items will be Contractor furnished and installed: Provide 610 mm deep [2'-0"] plastic laminate countertop by width (see Concept Design Drawings) with integral side and backsplash, single compartment stainless steel kitchen sink 457 x 457 x 203 mm deep [18" x 18" x 8"]. Provide 330 mm deep [13"] of wall cabinets; mounted to provide 610 mm clearance above countertop. Provide dedicated electrical receptacle for coffee maker.

2-7.1.8.3 Finishes:
Floor: vinyl composition tile.
Base: resilient base.
Walls: painted gypsum wallboard.
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.1.9 **Command Section Private Toilet (TOIL)**. Provide one private toilet room on the third floor S-1 Administration area. Room shall be sized to comply with handicap accessibility requirements. Room shall be accessed from Administrative Area Corridor.

2-7.1.9.1 Function: Uni-sex single-occupant toilet and lavatory; for use by staff and visitors.

2-7.1.9.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: one floor mounted toilet, one wall-hung lavatory with fixtures and fittings, mirror with shelf above lavatory, paper towel dispenser/waste receptacle, soap dispenser, toilet tissue dispenser, and one toilet seat cover dispenser.

2-7.1.9.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile wainscot 1219 mm high with painted water-resistant gypsum board above.
Ceiling: painted gypsum wallboard.

2-7.1.9.4 Other requirements: Provide 914 mm [3'-0"] wide entry door.

2-7.1.10 **Storage (ST)**. Provide one on the third floor.

2-7.1.10.1 Function: storage

2-7.1.10.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: portable shelving.

2-7.1.10.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.1.10.4 Other requirements: provide 914 mm [3'-0"] wide door into room.

2-7.2 **S-1 Section**. Provide one group of offices on the third floor. Command Section shall be accessed through the S-1 Clerical/Central Files area.

2-7.2.1 **S-1 Officer (S-1 OFF)**. Provide one on the third floor. Room shall be accessed through the S-1 Clerical/Central Files area. Occupants: 1, and occasional visitors.

2-7.2.1.1 Function: Private office for S-1 officer.

2-7.2.1.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: one desk with return, one bookcase, two legal-size four-drawer file cabinets, one side chair, and one desk chair.

2-7.2.1.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.2.1.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-7.2.2 **S-1 Clerical/Central Files (S-1)**. Provide one on the third floor. S-1 Clerical/Central Files shall be accessed from the exterior corridor. The area shall have direct access to S-1 and Command Section private offices, and reception area. Occupants: 7 staff and occasional visitors.

2-7.2.2.1 Function: Open office area for S-1 admin staff; access to S-1 and Command offices.

2-7.2.2.2 Furnishings/Fixtures/Equipment: the following item will be government furnished and installed: seven systems furniture workstations.

2-7.2.2.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.2.2.4 Other requirements: Provide 914 mm [3'-0"] wide door into room. Exterior window is desirable.

2-7.3 **Personnel and Administration Center (PAC)** Provide one group of offices on the third floor.

2-7.3.1 **PAC (OFF)**. Provide one on the third floor. Room shall be accessed through the PAC Open

Office area. Occupants: 1, and occasional visitors.

2-7.3.1.1 Function: Private office for PAC officer.

2-7.3.1.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: one desk with return, one bookcase, two legal-size four-drawer file cabinets, one side chair, and one desk chair.

2-7.3.1.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.3.1.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-7.3.2 **PAC Clerical/Central Files (PAC)**. Provide one on the third floor. PAC Clerical/Central Files shall be accessed from the Reception Area. Occupants: 7 staff and occasional visitors.

2-7.3.2.1 Function: Open office area for PAC admin staff.

2-7.3.2.2 Furnishings/Fixtures/Equipment: the following item will be government furnished and installed: seven systems furniture workstations.

2-7.3.2.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.3.2.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-7.4 **S-2 SECTION**. Provide one group of offices on the third floor. In a two-story building locate S-2 Section on the second floor.

2-7.4.1 **S-2 Officer (OFF)**. Provide one on the third floor. Room shall be accessed through the S-2 Clerical/Central Files area. Occupants: 1, and occasional visitors.

2-7.4.1.1 Function: Private office for S-2 officer.

2-7.4.1.2 Furnishings/Fixtures/Equipment: the following item will be government furnished and installed: one desk with return, one bookcase, two legal-size four-drawer file cabinets, one side chair, and one desk chair.

2-7.4.1.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard or painted veneer plaster
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.4.1.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-7.4.2 **Crypto Storage (CRYPTO)**. Provide one on the third floor.

2-7.4.2.1 Function: storage

2-7.4.2.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: portable shelving.

2-7.4.2.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.4.2.4 Other requirements: provide 914 mm [3'-0"] wide door into each room.

2-7.4.3 **S-2 Clerical/Central Files (S-2)**. Provide one on the third floor. S-2 Clerical/Central Files shall be accessed from the lobby or corridor. The area shall have direct access to S-2 private offices, and the Secured Documents Vault. Occupants: 8 staff , and occasional visitors.

2-7.4.3.1 Function: Open office area for S-2 admin staff; access to other S-2 space.

2-7.4.3.2 Furnishings/Fixtures/Equipment: the following item will be government furnished and installed: eight systems furniture workstations.

2-7.4.3.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.4.3.4 Other requirements: Provide 914 mm [3'-0"] wide door into room. Exterior window is desirable. Minimum ceiling height 2642 mm [8'-8"].

2-7.4.4 **S-2 Storage (ST)**. Provide one on the third floor.

2-7.4.4.1 Function: storage

2-7.4.4.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: portable shelving.

2-7.4.4.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.4.4.4 Other requirements: provide 914 mm [3'-0"] wide door into each room.

2-7.5 **S-3 SECTION**. Provide one group of offices on the third floor.

2-7.5.1 **S-3 Officer (OFF)**. Provide one on the third floor. Room shall be accessed through the S-3 Clerical/Central Files area. Occupants: 1, and occasional visitors.

2-7.5.1.1 Function: Private office for S-3 officer.

2-7.5.1.2 Furnishings/Fixtures/Equipment: the following item will be government furnished and installed:

one desk with return , one bookcase , two legal-size four-drawer file cabinets, one side chair, and one desk chair.

2-7.5.1.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.5.1.4 Other requirements: Provide 914 mm [3'-0"] wide door into room. Room shall have exterior window.

2-7.5.2 **S-3 Clerical/Central Files (S-3)**. Provide one on the third floor. The area shall have direct access to S-3 private offices. Occupants: 8 staff , and occasional visitors.

2-7.5.2.1 Function: Open office area for S-3 admin staff; access to S-3 office.

2-7.5.2.2 Furnishings/Fixtures/Equipment: the following item will be government furnished and installed: eight systems furniture workstations.

2-7.5.2.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.5.2.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-7.6 **S-4 SECTION**. Provide one group of offices on the third floor. In a two-story building locate S-4 Section on the first floor.

2-7.6.1 **S-4 Officer (OFF)**. Provide one on the third floor. Room shall be accessed through the S-4 Clerical/Central Files area. Occupants: 1, and occasional visitors.

2-7.6.1.1 Function: Private office for S-4 officer.

2-7.6.1.2 Furnishings/Fixtures/Equipment: the following item will be government furnished and installed: one desk with return , one bookcase , two legal-size four-drawer file cabinets, one side chair, and one desk chair.

2-7.6.1.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.6.1.4 Other requirements: Provide 914 mm [3'-0"] wide door into room. Room shall have exterior window.

2-7.6.2 **S-4 Clerical/Central Files (S-4)**. Provide one on the third floor. S-4 Clerical/Central Files shall be accessed from the lobby or corridor. The area shall have direct access to S-4 private offices. Occupants: 8 staff , and occasional visitors.

2-7.6.2.1 Function: Open office area for S-4 admin staff; access to S-4 office.

2-7.6.2.2 Furnishings/Fixtures/Equipment: the following item will be government furnished and installed: eight systems furniture workstations.

2-7.6.2.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.6.2.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-7.6.3 **S-4 Storage & Supplies (SUPP)**. Provide one on the third floor. Room shall be under control of, and accessed from, S-4/Clerical/Central Files area.

2-7.6.3.1 Function: Storage of miscellaneous equipment for S-4 Section.

2-7.6.3.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: portable shelving.

2-7.6.3.3 Finishes:
Floor: vinyl composition tile
Base: resilient cove base
Walls: painted gypsum wallboard or
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.6.3.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-7.7 **S-6 SECTION**. Provide one group of offices on the third floor.

2-7.7.1 **S-6 Officer (OFF)**. Provide one on the third floor. Room shall be accessed through the S-6 Clerical/Central Files area. Occupants: 1, and occasional visitors.

2-7.7.1.1 Function: Private office for S-6 officer.

2-7.7.1.2 Furnishings/Fixtures/Equipment: the following item will be government furnished and installed: one desk with return , one bookcase , two legal-size four-drawer file cabinets, one side chair, and one desk chair.

2-7.7.1.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.7.1.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-7.7.2 **S-6 Clerical/Central Files (S-6)**. Provide one on the third floor. The area shall have direct access to S-6 private offices. Occupants: 8 staff , and occasional visitors.

2-7.7.2.1 Function: Open office area for S-6 admin staff; access to S-6 office.

2-7.7.2.2 Furnishings/Fixtures/Equipment: the following item will be government furnished and installed: eight systems furniture workstations.

2-7.7.2.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.7.2.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-7.8 **Equal Opportunity Office (EO)**. Provide one on the third floor. Room shall be accessed through the exterior corridor (Lanai). Occupants: 1, and occasional visitors.

2-7.8.1 Function: Private office EO officer.

2-7.8.2 Furnishings/Fixtures/Equipment: the following item will be government furnished and installed: one desk with return , one bookcase , two legal-size four-drawer file cabinets, one side chair, and one desk chair.

2-7.8.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.8.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-7.9 **Siprnet Room (SIPRNET)**. Provide a Siprnet Room on the third floor. The construction of the Siprnet Room shall be similar to that of the Arms Vault, see paragraph 5-7.2. Coordinate with the authority having jurisdiction for specific construction requirements.

2-7.9.1 Function: Storage and issue of weapons.

2-7.9.2 Furnishings/Fixtures/Equipment: None.

2-7.9.3 Finishes:
Floor: sealed concrete
Base: none.
Walls: painted concrete.
Ceiling: painted concrete.

2-7.9.4 Other requirements: Provide 914 mm [3'-0"] wide hollow metal door into room.

2-7.10 **CLASSROOM AREAS**. Provide one group of classrooms for the battalion on the third floor of Building 357. Classrooms will be accessed from an interior corridor or exterior corridor (Lanai). The Classroom/L.R.C. and Classroom No. 2 shall be divided by operable panel partitions and provided with appropriate entrances and exits to allow two rooms to be combined for use as one large classroom.

2-7.10.1 **Classroom/Learning Resource Center (CLASSRM L.R.C.)**. Each classroom shall be located to allow direct access from the main corridor/lobby, and direct egress out of the building. Occupants: up to 60 persons in each room.

2-7.10.1.1 Function: Soldier training and other meetings.

2-7.10.1.2 Furnishings/Fixtures/Equipment: the following items will be Government furnished and

installed: tables and chairs for up to 60 occupants; one lectern; one marker board (minimum 3658 mm wide x 1219 mm high [12'-0" x 4'-0"]) and one 2438 mm wide [8'-0"]
The following items will be Contractor furnished and installed: wall separating Classroom/L.R.C. and Classroom No.2 shall be operable panel partition with minimum STC rating as indicated in SOW Ch. 5. Provide recessed ceiling mounted, motorized projection screen; 2438 mm wide [8'-0"]; operable partition. Coordinate with user and add requirements for cable television outlets, television support brackets, or other equipment.

2-7.10.1.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.10.1.4 Other requirements: Provide 914 mm [3'-0"] wide doors into room.

2-7.10.2 **Classroom No. 2 (CLASSRM No. 2)**. Each classroom shall be located to allow direct access from the main corridor/lobby, and direct egress out of the building. Occupants: up to 60 persons in each room.

2-7.10.2.1 Function: Soldier training and other meetings.

2-7.10.2.2 Furnishings/Fixtures/Equipment: The room shall accommodate tables and chairs for up to 60 occupants; one lectern. Walls separating classrooms shall be operable panel partitions with minimum STC rating as indicated in SOW Ch. 5. Provide one marker board (minimum 3658 mm wide x 1219 mm high [12'-0" x 4'-0"]) and one 2438 mm wide [8'-0"] wall mounted pull-down projection screen Coordinate with user and add requirements for cable television outlets, television support brackets, or other equipment; identify whether equipment is to be contractor or government provided.

2-7.10.2.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.10.2.4 Other requirements: Provide 914 mm [3'-0"] wide doors into room. Minimum ceiling height 2642 mm [8'-8"] at perimeter, 3048 mm [10'-0"] in main portion of room.

2-7.10.3 **Classroom No. 1 (CLASSRM No. 1)**. Each classroom shall be located to allow direct access from the main corridor/lobby, and direct egress out of the building. Occupants: up to 60 persons in each room.

2-7.10.3.1 Function: Soldier training and other meetings.

2-7.10.3.2 Furnishings/Fixtures/Equipment: the following items will be Government furnished and installed: tables and chairs for up to 60 occupants; one lectern; one marker board (minimum 3658 mm wide x 1219 mm high [12'-0" x 4'-0"]) and one 2438 mm wide [8'-0"]
The following items will be Contractor furnished and installed: Provide recessed ceiling mounted, motorized projection screen; 2438 mm wide [8'-0"]. Coordinate with user and add requirements for cable television outlets, television support brackets, or other equipment.

2-7.10.3.3 Finishes:
Floor: vinyl composition tile
Base: resilient base

Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.10.3.4 Other requirements: Provide 914 mm [3'-0"] wide doors into room.

2-7.10.4 **Resource Center (RESOURCE CTR)**. Each classroom shall be located to allow direct access from the main corridor/lobby, and direct egress out of the building. Occupants: up to 60 persons in each room.

2-7.10.4.1 Function: Soldier training and other meetings.

2-7.10.4.2 Furnishings/Fixtures/Equipment: the following items will be Government furnished and installed: tables and chairs for up to 60 occupants; one lectern; one marker board (minimum 3658 mm wide x 1219 mm high [12'-0" x 4'-0"]) and one 2438 mm wide [8'-0"]
The following items will be Contractor furnished and installed: Provide recessed ceiling mounted, motorized projection screen; 2438 mm wide [8'-0"]. Coordinate with user and add requirements for cable television outlets, television support brackets, or other equipment.

2-7.10.4.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.10.4.4 Other requirements: Provide 914 mm [3'-0"] wide doors into room.

2-7.11 **Re-Enlist Office (RE-ENLIST)**. Provide one on the third floor. Room shall be accessed from the exterior corridor. Occupants: 1, and occasional visitors.

2-7.11.1 Function: Private office for re-enlistment personnel.

2-7.11.2 Furnishings/Fixtures/Equipment: the following item will be government furnished and installed: one desk with return , one bookcase , two legal-size four-drawer file cabinets, one side chair, and one desk chair.

2-7.11.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard
Ceiling: Suspended acoustic tile ceiling grid system.

2-7.11.4 Other requirements: Provide 914 mm [3'-0"] wide door into room.

2-7.12 **Battalion HQ Common Areas**. Provide the following Common areas for the Battalion HQ. Handicapped accessibility is required in all common areas except janitor closet and shower rooms.

2-7.12.1 **Lobby, Corridors, and Vestibules**. Provide as required to allow access to building spaces. Unless otherwise required, minimum width of main corridors providing access to classroom area shall not be less than 2438 mm [8'-0"]; minimum width of other main corridors shall not be less than 1829 mm [6'-0"]. Corridor width shall comply with applicable egress codes.

2-7.12.1.1 Function: Entry to the facility; egress and circulation through the building.

2-7.12.1.2 Furnishings/Fixtures/Equipment: the following items will be Contractor furnished and installed:

wall mounted electric water cooler. Provide mechanical and electrical systems to comply with applicable codes. Provide fire extinguishers in semi-recessed fire extinguisher cabinets to comply with applicable codes. Provide interior signage to identify major spaces. Provide one building directory near each main entrance and one building directory near first floor elevator doors. The follwing item will be Government furnished and installed: Provide one 1219 mm high x 1829 mm wide [4'-0" x 6'-0"] wall mounted bulletin board.

2-7.12.1.3 Finishes:
Floor: vinyl composition tile
Base: resilient cove base.
Walls: painted gypsum wallboard
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-7.12.1.4 Other requirements: Handicap accessible.

2-7.12.2 **Vending Area (VENDING).** Provide minimum one area on the third floor..

2-7.12.2.1 Function: Space for soft drink and snack vending machines, and ice machine-dispenser.

2-7.12.2.2 Furnishings/Fixtures/Equipment: The following items will be Government furnished and installed: one ice cube machine-dispenser designed for hotel ice bucket filling, capable of producing minimum 250 lbs. of regular ice cubes in 24 hours, with 180 lb. Storage; ice machine manufacturer's automatic cleaning system to clean and sanitize the water distribution system of the machine at scheduled intervals. Ice machine shall be Energy Star compliant; four full-size soft drink and snack vending machines. Vending machines will not require plumbing connections.

2-7.12.2.3 Finishes:
Floor: vinyl composition tile
Base: resilient base
Walls: painted gypsum wallboard.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-7.12.2.4 Other requirements: Provide electrical power to accommodate vending machines and to comply with applicable codes.

2-7.13 **Command Section Common Locker/Shower Areas (BATTALION TOILET/SHOWER)**. Provide one group of men's and one group of women's common locker/shower area on the third floor of Building 357. Provide the quantity of lockers and fixtures as indicated in the table below. Handicapped accessibility is not required. Exterior entrance vestibules shall be provided. Entrances shall provide visual privacy into the spaces.

**Table 2-7.13 Locker Room Plumbing Fixture and Locker Quantities**

| | BATTALION HQ | |
|---|---|---|
| | **MEN** | **WOMEN** |
| **Lockers** | 16 | 8 |
| **Toilets** | 3 | 3 |
| **Urinals** | 2 | - |
| **Lavatories** | 3 | 3 |
| **Unisex Showers** | 2 | |

2-7.13.1 **Women's Locker Room**. Provide one room sized to accommodate the number of lockers and plumbing fixtures described. Provide exterior entrance(s) with vestibule. For egress purposes, the

occupant load shall be equal to the higher of the following numbers: a) the number of lockers in the room, or b) the code determined number of occupants calculated by multiplying room area x the occupant load factor.

2-7.13.1.1 Function: Toilets, showers and lockers for female soldiers.

2-7.13.1.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: floor mounted toilets, wall-hung lavatories, and ceramic tile shower enclosures in the quantities indicated in the table above. Provide toilet partitions at each toilet. Provide the following toilet accessories: one mirror with shelf above each lavatory; one paper towel dispenser/waste receptacle per two lavatories (or fraction thereof); one soap dispenser per lavatory; one sanitary napkin disposal per toilet; one toilet tissue dispenser per toilet; one toilet seat cover dispenser per toilet; one soap holder per shower; one shower curtain and rod at each shower; two double pin robe hooks at each dressing compartment; one robe hook on each toilet partition door; one sanitary napkin and tampon vending machine. Provide 305 mm [1'-0"] of locker room bench per 5 lockers provided. Provide two wall mounted GFCI electric outlets per two lavatories (or fraction thereof); mount adjacent to mirrors. Provide electric water cooler (EWC) at entrance vestibule from exterior. Provide fire extinguishers in semi-recessed fire extinguisher cabinets to comply with applicable codes.

2-7.13.1.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile.
Ceiling: painted water resistant gypsum board.

2-7.13.1.4 Other requirements: Provide 914 mm [3'-0"] wide entry door. Locks shall be as specified in paragraph 5-4.9.5.3.

2-7.13.2 **Men's Locker Room**. Provide one room, sized to accommodate the number of lockers and plumbing fixtures described. Provide exterior entrance(s) with airlock vestibule. For egress purposes, the occupant load shall be equal to the higher of the following numbers: a) the number of lockers in the room, or b) the code determined number of occupants calculated by multiplying room area x the occupant load factor.

2-7.13.2.1 Function: Toilets, showers and lockers for male soldiers.

2-7.13.2.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: floor mounted toilets, wall-hung lavatories, and ceramic tile shower enclosures in the quantities indicated in the table above. Provide toilet partitions at each toilet. Provide the following toilet accessories: one mirror with shelf above each lavatory; one paper towel dispenser/waste receptacle per two lavatories (or fraction thereof); one soap dispenser per lavatory; one sanitary napkin disposal per toilet; one toilet tissue dispenser per toilet; one toilet seat cover dispenser per toilet; one soap holder per shower; one shower curtain and rod at each shower; two double pin robe hooks at each dressing compartment; one robe hook on each toilet partition door; one sanitary napkin and tampon vending machine. Provide 305 mm [1'-0"] of locker room bench per 5 lockers provided. Provide two wall mounted GFCI electric outlets per two lavatories (or fraction thereof); mount adjacent to mirrors. Provide electric water cooler (EWC) at entrance vestibule from exterior. Provide fire extinguishers in semi-recessed fire extinguisher cabinets to comply with applicable codes.

2-7.13.2.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile.
Ceiling: painted water resistant gypsum board.

2-7.13.2.4 Other requirements: Provide 914 mm [3'-0"] wide entry door. Locks shall be as specified in paragraph 5-4.9.5.3.

2-7.14 **BUILDING 357 SUPPORT AREAS**. Provide the following areas for the Battalion HQ building. Handicapped accessibility is not required in mechanical rooms, electrical and communications closets, and elevator machine room. All other support spaces shall be handicap accessible.

2-7.14.1 **Mechanical Room(s) (MECH)**. Provide dedicated areas for mechanical equipment located on the third floor. Each battalion shall have independent operation and control of HVAC system for its own spaces, but mechanical equipment may serve more than one battalion, and mechanical rooms may be combined. Mechanical rooms shall not be used for storage or other purposes. Access will be limited to authorized personnel. Rooms shall allow easy equipment removal and maintenance. Provide floor openings and vertical shaft spaces as necessary.

2-7.14.1.1 Function: Spaces for HVAC, water heating, and other plumbing and mechanical equipment.

2-7.14.1.2 Furnishings/Fixtures/Equipment: None.

2-7.14.1.3 Finishes:
Floor: sealed concrete
Base: resilient cove base
Walls: painted gypsum wallboard and painted concrete masonry units
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-7.14.1.4 Other requirements: Doors shall have storeroom function lockset master-keyed to existing system.

2-7.14.2 **Electrical Room(s) (ELEC)**. Provide dedicated areas for electrical equipment located on the third floor. Each battalion shall have independent metering and control of the electrical system for its own spaces, but electrical equipment may serve more than one battalion, and electrical rooms may be combined. Electrical rooms shall not be used for storage or other purposes. Access will be limited to authorized personnel. Rooms shall allow easy equipment removal and maintenance.

2-7.14.2.1 Function: Spaces for electrical equipment.

2-7.14.2.2 Furnishings/Fixtures/Equipment: None.

2-7.14.2.3 Finishes: Floor: sealed concrete
Base: resilient cove base
Walls: painted gypsum wallboard or painted veneer plaster, or painted concrete masonry units
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-7.14.2.4 Other requirements: Electrical service to buildings shall be underground. Doors shall have storeroom function lockset master-keyed to existing system..

2-7.14.3 **Telecommunication Room (TELE)**. Provide dedicated room(s) for communication distribution equipment located on the third floor. Each room shall be dedicated to a single battalion, and shall not be combined with mechanical or electrical rooms. Provide each battalion with one main communication room; minimum size 3048 mm [10'-0"] x 3353 mm [11'-0"]. In two-story buildings, the communication room shall be located on the second floor. Provide additional communication rooms as needed; all spaces having telephone or computer data outlets shall be located to allow a maximum cable length of 90 m [295 feet] between outlet and communication room. Minimum dimensions of secondary communication rooms shall be 2134 mm [7;-0"] x 3048 mm [10'-0"]. Provide floor openings and vertical shaft spaces as necessary. Rooms shall be accessed

from corridors. Access will be limited to authorized personnel.

2-7.14.3.1 Function: Distribution areas for telephone, data network, and cable television.

2-7.14.3.2 Furnishings/Fixtures/Equipment: None.

2-7.14.3.3 Finishes: Floor: vinyl composition tile.
Base: resilient cove base
Walls: painted gypsum wallboard, or painted concrete masonry units
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-7.14.3.4 Other requirements: Door shall have minimum 914 mm [3'-0"] wide door with lockset master-keyed to existing system.. Provide three 102 mm [4"] empty conduits connecting vertically stacked communication rooms.

2-7.14.4 **Elevator**. Provide one hydraulic passenger elevator.

2-7.14.4.1 Function: Vertical conveyance of people and furniture.

2-7.14.4.2 Furnishings/Fixtures/Equipment: Passenger elevator: 2,500 lb. capacity, minimum 75 feet per minute speed; center opening doors. Refer to Chapter 5 for additional requirements.

2-7.14.4.3 Cab finishes: Floor: vinyl composition tile
Walls: plastic laminate
Ceiling: suspended translucent panel
Car door and front: satin finish stainless steel
Hoistway entrance doors and frame: satin finish stainless steel

2-7.14.4.4 Other requirements: Handicapped accessible.

2-7.14.5 **Elevator Machine Room (MACH)**. Provide one on the first floor. Size to comply with equipment and code requirements.

2-7.14.5.1 Function: Space for hydraulic elevator equipment.

2-7.14.5.2 Furnishings/Fixtures/Equipment: None.

2-7.14.5.3 Finishes: Floor: sealed concrete
Base: resilient cove base
Walls: painted concrete, or painted concrete masonry units
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-7.14.6 **Interior Corridor**. Provide as required to allow circulation to building spaces, and comply with applicable code egress requirements. Due to security, climate, and force protection concerns, interior corridors are the preferred means of circulation between living units and other building spaces.

2-7.14.6.1 Function: Circulation and means of egress.

2-7.14.6.2 Furnishings/Fixtures/Equipment (FFE): Provide mechanical and electrical systems to comply with applicable codes. Provide fire extinguishers in semi-recessed fire extinguisher cabinets to comply with applicable codes.

2-7.14.6.3 Finishes:
Floor: vinyl composition tile

Base: resilient cove base.
Walls: impact resistant gypsum wallboard with painted finish.
Ceiling: patch existing exposed ceiling to match existing adjacent and paint.

2-7.14.6.4 Other requirements: Handicap accessible.

2-7.14.7 **Exterior Corridor (LANAI).** Refers to an unconditioned, covered circulation space that is enclosed on one long side (adjacent to the building), and has a guardrail on the other side. Provide as required to allow circulation to building spaces and comply with applicable code egress requirements. exterior corridors may be provided to link breezeways with stairs and other circulation components. Exterior corridors shall not be used to provide access to living units

2-7.14.7.1 Function: Circulation and means of egress.

2-7.14.7.2 Furnishings/Fixtures/Equipment (FFE): Provide mechanical and electrical systems to comply with applicable codes. Provide fire extinguishers in semi-recessed fire extinguisher cabinets to comply with applicable codes. All fixtures and equipment shall be suitable for exterior locations.

2-7.14.7.3 Finishes:
Floor: sealed concrete
Base: Exterior wall material
Walls: Exterior wall material
Ceiling: painted underside of concrete structure above

2-7.14.7.4 Other requirements: Handicap accessible. With the exception of fire sprinkler systems, no piping, conduit or ductwork shall be exposed in exterior corridor. Provide slip resistant finish texture on concrete floor. Guardrails shall be designed in accordance with applicable codes.

2-7.14.8 **Loft Space (LOFT)**. Occurs on the third floor of Building 357

2-7.14.8.1 Function: unfinished space

2-7.14.8.2 Furnishings/Fixtures/Equipment: N.A.

2-7.14.8.3 Finishes:
Floor: stripped smooth of existing finish
Base: none
Walls: paint existing walls
Ceiling: painted underside of concrete structure above.

2-7.14.8.4 Other requirements: Provide pair of 914 mm [3'-0"] wide historic doors as required.

**2-7.15 Common Locker/Shower Facilities Building 357 (COF TOILET/SHOWER)**. Provide one group of men's and one group of women's common locker/shower facilities for each company. Three (3) COF Toilet/Showers shall be provided , one on each floor, in Building 355. Two (2) COF Toilet/Showers shall be provided on the second floor in Building 357. The COF Toilet/Shower for the Large COF shall be located on the third floor of Building 355.. Quantities of lockers and plumbing fixtures for men and women vary by company size. Provide the quantity of lockers and fixtures for Medium Company Operations Facility on the first and second floor and as indicated in the table below. Provide the quantity of lockers and fixtures for Large Company Operations Facility on the third floor and as indicated in the table below. Soldiers will use locker rooms before and after physical training. Handicapped accessibility is not required. Additional entrances may be provided from a common public corridor in the COF. Entrances shall be separate and

distinct from the entrances to company supply and administrative areas. Exterior entrance vestibules shall be provided. Entrances shall provide visual privacy into the spaces.

**Table 2-7.15 Locker Room Plumbing Fixture and Locker Quantities**

| | MEDIUM COMPANY | |
|---|---|---|
| | **MEN** | **WOMEN** |
| **Lockers** | 82 | 8 |
| **Toilets** | 2 | 1 |
| **Urinals** | 1 | - |
| **Lavatories** | 2 | 1 |
| **Showers *** | 5 | 1 |

2-7.15.1 **Women's Locker Room**. Provide one or more rooms, sized to accommodate the number of lockers and plumbing fixtures required for each company served. Provide exterior entrance(s) with vestibule. For egress purposes, the occupant load shall be equal to the higher of the following numbers: a) the number of lockers in the room, or b) the code determined number of occupants calculated by multiplying room area x the occupant load factor.

2-7.15.1.1 Function: Toilets, showers and lockers for female soldiers.

2-7.15.1.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: floor mounted toilets, wall-hung lavatories, and ceramic tile shower enclosures in the quantities indicated in the table above. Provide toilet partitions at each toilet. Provide the following toilet accessories: one mirror with shelf above each lavatory; one paper towel dispenser/waste receptacle per two lavatories (or fraction thereof); one soap dispenser per lavatory; one sanitary napkin disposal per toilet; one toilet tissue dispenser per toilet; one toilet seat cover dispenser per toilet; one soap holder per shower; one shower curtain and rod at each shower; two double pin robe hooks at each dressing compartment; one robe hook on each toilet partition door; one sanitary napkin and tampon vending machine. Provide 305 mm [1'-0"] of locker room bench per 5 lockers provided. Provide two wall mounted GFCI electric outlets per two lavatories (or fraction thereof); mount adjacent to mirrors. Provide electric water cooler (EWC) at entrance vestibule from exterior. Provide fire extinguishers in semi-recessed fire extinguisher cabinets to comply with applicable codes.

2-7.15.1.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile.
Ceiling: painted water resistant gypsum board.

2-7.15.1.4 Other requirements: Provide 914 mm [3'-0"] wide entry door. Locks shall be as specified in paragraph 5-4.9.5.3.

2-7.15.2 **Men's Locker Room**. Provide one or more rooms, sized to accommodate the number of lockers and plumbing fixtures required for each company served. Provide exterior entrance(s) with vestibule. For egress purposes, the occupant load shall be equal to the higher of the following numbers: a) the number of lockers in the room, or b) the code determined number of occupants calculated by multiplying room area x the occupant load factor.

2-7.15.2.1 Function: Toilets, showers and lockers for male soldiers.

2-7.15.2.2 Furnishings/Fixtures/Equipment (FFE): The following items will be Contractor furnished and installed: floor mounted toilets, wall-hung lavatories, and ceramic tile shower enclosures in the quantities indicated in the table above. Provide toilet partitions at each toilet. Provide the following toilet accessories:

one mirror with shelf above each lavatory; one paper towel dispenser/waste receptacle per two lavatories (or fraction thereof); one soap dispenser per lavatory; one toilet tissue dispenser per toilet; one toilet seat cover dispenser per toilet; one soap holder per shower; one shower curtain and rod at each shower; one double pin robe hook outside each shower; one robe hook on each toilet partition door. Provide 305 mm [1'-0"] of locker room bench per 5 lockers provided. Provide two wall mounted GFCI electric outlets per two lavatories (or fraction thereof); mount adjacent to mirrors. Provide electric water cooler (EWC) at entrance vestibule from exterior. Provide fire extinguishers in semi-recessed fire extinguisher cabinets to comply with applicable codes.

2-7.15.2.3 Finishes:
Floor: ceramic tile.
Base: ceramic tile.
Walls: ceramic tile.
Ceiling: painted water resistant gypsum board.

2-7.15.2.4 Other requirements: Provide 914 mm [3'-0"] wide entry door. Locks shall be as specified in paragraph 5-4.9.5.3.

**2-8 OTHER STRUCTURES.** Detached Structures that support the four Quad Buildings

2-8.1 **Gear Wash Building (GEAR WASH BUILDING)**. Provide one located at the courtyard of Quad C. This structure is a combination of Gear wash and recreation area. Provide covered and paved exterior structure for gear wash and picnic functions. The recreation and gear wash area will be used use by several soldiers at a time. Design similar to Quad F Gear Wash Building, see sketches in Attachment 25

2-8.1.1 Function: Exterior area for washing, TA-50 gear and footgear prior to entering building. Also, area for outdoor recreation that includes picnic table and barbeque area.

2-8.1.2 Furnishings/Fixtures/Equipment: the following items will be Contractor furnished and installed: Provide drainage assembly for gear wash area: provide continuous x 305 mm [12"] wide aluminum or stainless steel trench grating, with non-slip surface, supported by concrete trench walls. Concrete trench will terminate at a storm drainage inlet box. Box shall be filled with stone and filter material to trap sediment . Filtered runoff shall be piped to storm drainage system. Provide hosebib at 914mm [3'-0"] on center and 914mm [3'-0"] above floor grating. Provide main shut-off valve for hosebibs. Provide stainless steel gear rack for mounting on wall above trench grating; gear rack properties: 13mm [1/2"] thick x 152mm [6"] high x continuous length of trench drain. Fabricate in 1676mm [5'-6"] sections. Gear rack shall be mounted at 1676 mm [5'-6"] above trench. Top of grating and concrete structure shall align with adjacent concrete sidewalk. Provide concrete sidewalk between boot wash area and entrance sidewalk. Provide S.S. one basin wall mounted hand sink. Provide . The following items will Government furnished and installed: picnic tables and single chairs for 60 people.

2-8.1.3 Finishes: refer to exterior building material requirements.

2-8.1.4 Other requirements: Provide adequate drainage away from building.

2-8.2 **Pump House (PUMP HOUSE)**. Provide one at the corner of Waianae and Meigs Avenue.

2-8.2.1 Function: Exterior self-supporting building for fire pump equipment including, but not limited to, equipment as indicated.

2-8.2.2 Furnishings/Fixtures/Equipment: As required by Statement of Work and as indicated. Concrete floor slab shall be of sufficient strength and be designed for the equipment provided.

2-8.2.3 Finishes: refer to exterior building material requirements, see Chapter 5, paragraph 5-4.

Floor: sealed concrete; non-slip coating.
Base: none
Walls: painted concrete masonry units
Ceiling: exposed to structure, paint.

2-8.2.4 Other requirements: Provide adequate drainage away from building.

2-8.3 **Chiller Plant Building (CHILLER PLANT BUILDING)**. Provide one at the corner of Waianae and Meigs Avenue.

2-8.3.1 Function: Exterior self-supporting building for HVAC and hot water equipment including, but not limited to, equipment as indicated and in the Statement of Work

2-8.3.2 Furnishings/Fixtures/Equipment: As required by Statement of Work and as indicated. Concrete floor slab shall be of sufficient strength and be designed for the equipment provided.

2-8.3.3 Finishes: refer to exterior building material requirements, see Chapter 5, paragraph 5-4.
Floor: sealed concrete; non-slip coating.
Base: none
Walls: painted concrete masonry units
Ceiling: exposed to structure, paint.

2-8.3.4 Other requirements: Provide adequate drainage away from building.

# CHAPTER 3

## SITE PLANNING AND DESIGN

3-1 **SCOPE OF WORK.** This project consists of renovation and improvement of an existing Brigade Complex. Site planning and design shall be based on the concept design provided with the RFP drawings and the SOW requirements contained herein.

3-2 **SITE VERIFICATION.** Graphic and narrative descriptions of site opportunities and constraints have been provided. Concept design (approximately 30-35% level) Demolition, Site and Utility and Grading Plans are included with the RFP drawings. Water and electrical utility base maps are also included for informational purposes. Each offeror shall verify that the site meets the program requirements. The offeror shall perform a detailed site analysis to verify that the site meets the Brigade Complex requirements that are provided. The analysis results shall be documented in a written and graphic summary of site opportunities and constraints.

3-3 **EXISTING CONDITIONS.** The offeror shall be provided with a digital topographic survey for this site by the Contracting Office. It is the offeror's responsibility to verify the Government-furnished survey and obtain all additional survey information that may be required for a completed design and construction project. Any discrepancies which are found in the Government furnished survey shall be brought to the immediate attention of the Contracting Officer for clarification.
Schofield Barracks Brigade Complex, Quad C is bound by Waianae Avenue and Foote Avenue to the north and south, and Meigs Avenue and Flagler Avenue to the east and west. The complex encompasses approximately 4 hectare, in which Buildings 355, 356, 357 and 358 are situated. Existing uses within the complex include billeting, storage, administrative operations, and dining facilities for military personnel. An access road and parking are currently provided within the Quad as well as at the perimeter. A large open courtyard and basketball courts lie within the center of the Quad.

Potable water, wastewater, fire protection and a drainage system provide support to the on-site facilities. However, preliminary analyses of the supporting infrastructure indicate that the existing utilities are deteriorating and inadequate in providing sufficient service to the complex.

3-3.1 BaseMaps. Maps of the existing water and electrical distribution systems are included in the RFP drawings.. The locations of existing utilities shown on the utility maps are approximate only. The offeror shall scan the construction site with electromagnetic or sonic equipment and mark the surface of the ground where existing underground utilities are discovered. Immediately contact the Contracting Officer if actual conditions vary from the topographic survey.

3-4 **EXCAVATION PERMITS.** The contractor shall obtain approved U.S. Army Garrison, Hawaii Excavation Permit prior to beginning excavation work. A copy of the USAGH Excavation Permit is attached.

3-5 **SITE DEVELOPMENT PLAN.** Site improvements for the Quad C renovation should include:

- Provide grading for disturbed areas as a result of demolition work. Grade for parking lot extension east of Building 358. Additional parking provided shall replace those stalls lost as a result of AT/FP standoff requirements. Review existing site grading and correct any existing drainage deficiencies that may occur.
- Install new concrete curbs/ gutters within Quad C project limits.
- Install new concrete walkways within Quad C project limits.
- Install new AC pavement at interior access road within the Quad. Pavement analysis shall be conducted to verify pavement design.
- Extend parking lot east of Building 358 to provide for additional parking stalls removed for AT/FP requirements. Restripe the existing parking lot, as required to provide the required standoff distance.

- Install "No Parking" signage along Foote Avenue, Flagler Road, and Waianae Avenue.
- Parking with controlled access will be provided within Quad C for organizational vehicles only. Provide new pavement striping, as required.
- Cold-plane and provide 32 mm AC pavement overlay and acrylic surface at existing basketball courts. Provide restriping for two basketball courts and two volleyball courts.
- Install new posts and goals for each basketball court. Provisions for volleyball courts shall also be made.
- Install traffic gate (key card) for AT/FP access and exit control within Quad C. Access locations should be located along Waianae Avenue and intersection of Foote Avenue and Flaggler Road. Exit locations should be provided at Foote Avenue and intersection of Waianae Avenue and Flaggler Road.
- Install traffic gate (key card) and curbed landscape planters for AT/FP access control to parking lot east of Building 358.
- Install pipe bollards adjacent to new elevator shaft at Building 355.
- Provide two new bike racks (13 each, minimum) with concrete slabs adjacent to Buildings 355 and 356.
- Locate covered gear wash adjacent to basketball courts. Effluent shall be discharged into the sewer system.
- Locate chiller plant and fire pump house at area east of Building 355.
- Locate trash container enclosure at parking lot east of Building 358. Trash enclosure should be located outside the 25 meter standoff area.

3-6 **GRADING AND DRAINAGE.** Site grading and drainage shall be based on the concept design provided and the requirements contained in Site Engineering Chapter 4. The drainage scheme shall consist of all surface runoff directed to existing curb inlets adjacent to the project site. In addition, the grading should provide grading for areas disturbed during demolition and construction.
The principles of positive drainage should be applied to control the conditions that remove rainfall away from facilities and functions. Federal, State and local regulations regarding the design of stormwater management systems shall be considered the minimum design criteria. An NPDES permit shall be obtained as necessary. Additionally, minimize the impact of construction activities on drainage and prevent loss of soils by water and wind erosion. Designs which improve on existing water quality by incorporating sustainable design principles are encouraged, consistent with budget constraints and activity requirements.

3-7 **GENERAL SITE DESIGN CRITERIA.** Site design criteria shall be based on the concept design provided or as approved. The concept design established the following: orientation, site organization, spatial balance, character and scale, compatibility, life safety, circulation systems, view of the site, buffer zones, wind control, vehicular and pedestrian access, parking spaces for residents, administrative staff, handicapped, and visitors, connecting walks, fire protection access, site lighting, site furnishings, mechanical enclosures, trash collection dumpsters with trash enclosures, landscaping, and etc. Perimeters are restricted by antiterrorism/force protection minimum stand off distances.

3-8 **CIRCULATION AND PARKING.** The vehicular and pedestrian circulation system shall be based on the concept design provided or as approved. Quad C can be accessed from Waianae Avenue, Foote Avenue and Flagler Avenue by both vehicles and pedestrians. An access road, which shall be replaced, is provided within the Quad, which provides vehicular circulation for military personnel within the complex. Existing pipe posts and chains provide controlled access into the Quad, however, they are old and need to be replaced. Concrete walkways provide for pedestrian circulation through the site. Due to the condition of

the existing walkways, curbs and gutters, which are mildew stained, broken and uneven (tripping hazard), all walkways, curbs and gutters within the Quad should be replaced.
Additional parking stalls will be provided, to replace stalls removed for AT/FP requirements, by extending the parking east of building 358. Parking with controlled access, keyed gates and barriers for AF/TP access control, will be provided, within Quad C, for organizational vehicles only and for the POV parking lots west of building 356 and east of building 358. The circulation and parking system shall promote safe, efficient movement of vehicles and pedestrians within the site area. The vehicular and pedestrian circulation system should maintain the maximum separation of vehicles and pedestrians. Safe circulation systems have a clear hierarchy of movement, lead to a clear destination, and do not interrupt other functions. The following criteria shall be considered for designing parking and drives for vehicles and pedestrians:

3-8.1 Vehicular Circulation. Vehicular circulation layout is determined by applying the design vehicle templates to the site design. The passenger car class includes passenger cars and light delivery trucks, such as vans and pick-ups. The passenger car template is equivalent to the non-organizational - privately owned vehicle (POV). The truck class template includes single-unit trucks, recreation vehicles, buses, truck tractor semi-trailer combinations, and trucks or truck tractors with semi-trailers in combination with full trailers. Templates showing the turning movements for design vehicles are provided by the American Association of State Highway and Transportation Officials (AASHTO). Obtain templates and utilize them during the design of the facility. Provide the vehicle clearances that are required to meet traffic safety for emergency vehicles, service vehicles, and moving vans. Site entrances and site drive aisles shall include required traffic control signage. Maximize spacing between drives, incorporate right-angle turns, and limit the points of conflicts between traffic. Roadways shall be striped and marked with with thermoplastic compounds.

3-8.2 Parking and Access Driveway Design. Design all pavements for the wheel load associated with the design vehicle. Driveways shall be designed for two-way traffic and with a 3.1 m[10 ft.] minimum lane width. Minimum pavement edge radius for driveway intersection with installation roads shall be 4.6 m [15 ft.] and 9 m [30 ft.] respectfully.

3-8.3 Parking Area Layout Design.

3-8.3.1 Administrative Parking Area. Provide 44 parking stalls for area west of building 356 and 148 stalls for the area east of building 358. POV stalls without vehicle overhang shall be a 2.7 m x 5.5 m [9 ft x 18 ft]. The design vehicle template that is used to design this space shall be described. Parking aisle width shall be minimum 7.5m (24 ft.). Island widths shall be minimum 3 m (9 ft). Parking stall fillets shall be minimum 1 m (3 ft).

3-8.3.2 Handicap Accessible Vehicle (HAV) Parking. Parking space width, length, pavement marking, signage and accessible route clearances shall be provided as required to meet current Federal Accessibility Standards (FAS) and Americans with Disabilities Act Accessibility Guidelines (ADAAG)..

3-8.3.3 Wheel Stops. Vehicle wheel stops shall be provided. Wheel stops shall be positioned to prevent vehicle overhang from encroaching and damaging adjacent objects (sign post, planter box, etc.) located immediately in front of the stall.

3-8.3.3 Pavement Marking. Parking stall markings for other than handicap accessible stalls shall be painted with white 4-inch wide stripes. Arrows shall be marked with thermoplastic compounds. Parking spaces shall be marked reserved for military staff, organizational, employee, visitor, etc. After award, Contractor shall coordinate with the Government for exact number of reserved stalls and labeling requirements. Stop or approved bar stripes shall be provided at intersections at stop conditions with white thermoplastic striping.

3-8.4 Pedestrian Circulation. Pedestrian paths shall be provided from the parking areas to the building and from the existing roadway to the building. Pedestrian circulation should be safe and separate from vehicle circulation. Provide good sidewalk layout to connect all building entrances with parking and site facilities and existing walks. Pedestrian circulation should be based on pedestrian desired lines of walking between site

facilities and existing walks. Desired lines should be weighted to predict the most traveled routes. These routes would require paving. Topography and vegetation can be used to reinforce a sense of movement. Design pedestrian concentration areas with adequate paved area.

3-8.4.1 Sidewalk Design**.** Sidewalk design shall be based on the concept design provided. Walks widths shall be as indicated on the concept design drawings. Sidewalks shall be constructed with wire mesh reinforced concrete with a minimum thickness of 100 mm [4 in] and 1.25m(4 ft.) wide.

3-8.4.2 Ramps. Where required, ramps for the handicapped shall meet Federal Accessibility Standards (FAS) and Americans with Disabilities Act Accessibility Guidelines (ADAAG).

3-8.5 Trash and Electrical Equipment Enclosure Design.

3-8.5.1 General. Approximate size and layout of Trash and Electrical enclosures are indicated on the attached RFP civil concept drawings. Mechanical enclosure is attached to the southeast corner of the building and is indicated on the Architectural RFP Drawings. Contractor shall ensure final layout design will satisfy operational and maintenance requirements.

3-8.5.2 Trash Enclosure. Trash enclosure size and layout shall be compatible with the type of trash bin and collection service requirements. Design-Build Contractor shall coordinate with the DPW contracting office, 808-969-2496, for operational requirements. Enclosure wall height shall be sufficient to screen views from adjacent buildings and public roadways. Walls shall be constructed of split face CMU and shall be compatible with the architectural theme of the proposed new facility. In addition, trash enclosures shall be provided with a wheel stop along base of the far/inside wall of the enclosure to function as a barrier to protect the enclosure wall from accidental impacts.

3-8.5.3 Electrical Equipment Enclosure. Size of enclosure shall be in compliance with applicable codes and equipment manufacturer requirements. For applicable codes sheet Chapter 4, Site Engineering, Para. Section, Electrical Distribution.

3-9 **ANTITERRORISM/FORCE PROTECTION (AT/FP) STANDOFF REQUIREMENTS.**

3-9.1. General. The facilities shall be designed to meet DOD AT/FP requirements. (Note: For AT/FP Structural Requirements, see Chapter 6, Structural Design.)

3-9.2. Project Specific Requirements. Site Force Protection Standards that apply to the Quad C renovation project are as follows (Refer to structural engineering design analysis as it pertains to standoff requirements):

- Facility Characteristics (Unobstructed Space): Ensure that obstructions within 10 meters of inhabited buildings or portions thereof do not allow for concealment from observation of explosive devices 150 mm or greater in height.
- Establish access control to portions of parking areas that are closer than the required standoff distance to ensure unauthorized vehicles are not allowed closer than the required standoff distance. For primary gathering buildings and billeting, if access control is provided within the standoff distance, controlled parking may be permitted as close as 10 meters without hardening or analysis.
- Eliminate parking on roadways within the required standoff distances along roads adjacent to existing buildings.

For trash containers the minimum standoff distances apply:

- Inhabited Buildings – 10 meters
- Where the standoff distance is not available, harden trash enclosures to mitigate the direct blast effects and secondary fragment effects of the explosive on the building if the applicable level of protection can be proven by analysis. If trash enclosures are secured to preclude introduction of objects into the enclosures by unauthorized personnel, they may be located closer to the building

as long as the provisions for “unobstructed space” are not violated.

- Openings in screening materials and gaps between the ground and screens or walls making up an enclosure must not be greater than 150 mm.

# CHAPTER 4

## SITE ENGINEERING

4-1 **REFERENCE REQUIREMENTS AND STANDARDS**. (Note: Where a conflict between requirements and/or standards occur, the more stringent shall apply.)

4-1.1. **Army/Military Construction Criteria**. Unless otherwise noted, the following criteria is available via the internet at;

http://www.hnd.usace.army.mil/techinfo/engpubs.htm

4-1.1.1. U.S. Army Corps of Engineers Technical Instructions, TI 800-01, Design Criteria, 20 July 1998.

4-1.1.2. U.S. Army Corps of Engineers Technical Instructions, TI 804-21, Design for Non-Organizational or Privately Owned Vehicle (POV), Site Circulation and Parking, November 1998.

4-1.1.3. Engineers Technical U.S. Army Corps of Instructions, TI 814-20, Wastewater Collection, 3 August 1998

**4-1.1.4. Army Technical Manual, TM 5-813-5, Water Supply, Water Distribution, November 1986**

**4-1.1.5.** United Facilities Criteria, UFC 3-600-01, Design: Fire Protection Engineering for Facilities, 17 April 2003.

4-1.1.6 Interim Department of Defense Antiterrorism/Force Protection Construction Standards, December 16, 1999. (For Official Use Only, not available for viewing or download. After award of the Contract, a copy will be provided to the Contractor.)

4-1.2.1. Rules Relating to Storm Drainage Standards, Department of Planning and Permitting, City & County of Honolulu, January 2000.

4-1.2.2. The Department of Public Works, Standard Specifications for Public Works Construction, City and County of Honolulu, Sept. 1986.

4-1.2.3. The Department of Public Works, Standard Details for Public Works Construction, City and County of Honolulu, Sept 1984.

4-1.2.4. Board of Water Supply, Water System Standard and Approved Material List and Standard Details for

Water System Construction, Volume 1 and 2, City and County of Honolulu, 2002.

4-1.3 American Association of State Highway and Transportation Officials (ASSHTO) Publications. Standards are available online at www.transportation.org

4-1.3.1 U.S. Department of Transportation, Federal Highways Administration, Manual On Uniform Traffic Control Devices, Millennium Edition

4-1.3.2 AASHTO LRFD Bridge Design Specifications, 2nd Edition, 1998.

4-1.3.3 ASSHTO A Policy on Geometric Design of Highways and Streets, 4th Edition - The Green Book, 2001.

4-1.3.4 ASSHTO Roadside Design Guide, 2002.

4-1.3.5 UFC 4-010-01

4-1.4. Americans with Disabilities Act Accessibility Guidelines (ADAAG). Available from U.S. Architectural and Transportation Barriers Compliance Board, Suite 1000, 1331 F Street, N.W., Washington, D.C. 20004-2111 (202) 272-5434 or through the internet (http://www.access-board.gov/indexes/accessindex.htm).

4-1.5. American Water Works Association, Inc. (AWWA). Specifications are available from AWWA, 6666 Quincy Ave., Denver, CO 80235; voice: 800-926-7337; fax: 303-795-1989: http://www.awwa.org/. AWWA standards called for the standards of the Board of Water Supply, City and County of Honolulu, the following apply: AWWA C907 PolyVinyl Chloride (PVC) Pressure Fittings for Water - 4 Inch Through 8 Inch (100 mm Through 200 mm).

4-1.6 Storm Drainage Standards, Department of Public Works, County of Hawaii, February 1970. Information: Phone: 961-8321, Address: Hawaii County Building, 25 Aupuni Street, Room 202, Hilo, HI 96720.

## 4-2 SOILS, PAVEMENTS AND EARTHWORK

Soils Investigation Report (Geotechnical Report). Preliminary Soils Investigation Report dated March 2003 for Quad C is furnished in attachment entitled Preliminary Soils Investigation Report. Based upon the data provided in the RFP and Preliminary Soils Investigation Letter Report, a comprehensive Final Soils Investigation Report shall be furnished by the Offeror to whom this contract is awarded. The Final Soils Investigation Report shall be prepared by a professional engineer registered in the State of Hawaii with more than 10 years of experience in soil mechanics and geotechnical engineering. The Final Soils Investigation Report shall certify to the adequacy of the soil and foundation aspects of the design, including, but not limited to, special foundation types, earthwork construction, surface and subsurface drainage, erosion and siltation prevention during and after construction, and settlement or heave. After Government review of the Final Soils Investigation Report, additional soil borings, testing, and investigation, if required, shall be furnished by the Offeror with the final design documents at no additional cost to the Government.

NOTE TO OFFEROR: The soils investigation report furnished by the Government is a Preliminary Report intended for basic information only. The approximate subsurface soil conditions may not represent conditions at all locations. The flexible pavement sections and overlays shall be as designed for actual traffic and soil conditions, but in no case shall they be lighter (thinner) than that indicated below and in the Preliminary Soils Investigation Letter Report. Should new traffic parameters or actual soil conditions require a heavier pavement structure, a thicker pavement section shall be furnished by the Offeror.

### 4-2.1. **Minimum Pavement Structures:**

Parking Lots: 50 mm (2”) Asphaltic Concrete, State DOT IV Mix, 150 mm (6”) Base Course, 125 mm (5”) Subbase Course

Subbase and Base Course Compaction: Subbase and base course shall be compacted to minimum 100% of maximum density in accordance with AASHTO T 180.

4-2.2. **Soil Compaction**.

4-2.2.1. Soil compaction shall be per local standards specified for use in this contract and as amended herein. Compact each layer to not less than the percentage of maximum density specified in Table 4.1, determined in accordance with ASTM D 1557 Method D:

**TABLE 4.1- SOIL COMPACTION**

| Subgrade Preparation, Fills, Embankments, and Backfills | Compaction Requirements (Percentage of Maximum Density) | |
|---|---|---|
| Structures & Building Slabs | Cohesive Material<br>90 | Cohesionless Materials<br>95 |
| Streets, Paved Areas, Bike Paths | 90 | 95 |
| Sidewalks and Grassed Areas | 85 | 90 |

4-2.2.2. The compaction requirements shall be verified or modifications shall be recommended by the soils engineer in the Final Soils Report wherever engineering, soils, or climatic factors indicate the necessity to do so. Any modification to the stated compaction requirements shall require the approval of the Contracting Officer.

4-2.2.3. Soil Classification.

4-2.2.3.1. Cohesionless materials include materials classified in ASTM D 2487 as GW, GP, SW and SP. Cohesive materials include materials classified as GC, SC, ML, CL, and MH. Materials classified as GM and SM shall be identified as cohesionless only when the fines are nonplastic.

4-2.2.3.2. Satisfactory materials for filling and backfilling under all structures and general earthwork shall comprise any excavated on-site materials or imported materials classified in accordance with ASTM D 2487 as GW, GM, GC, GP, SW, SP, SM, SC, ML, MH, and CL, free of organic matter, stones larger than 75 mm (3-inches) in any dimension, other deleterious materials, and expansive values less than or equal to 2% when tested by the California Bearing Ratio method. For imported materials, that portion passing the No. 40 sieve shall be either nonplastic or shall have a liquid limit not greater than 40 and a plasticity index not greater than 15. Liquid limit and plasticity index shall be determined by ASTM D 4318. Where satisfactory materials are not available in sufficient quantity from required excavations, borrow materials shall be obtained from approved sources off Government-control land at the Contractor’s responsibility.

4-2.3. **Concrete Slab-On-Grade.**

4-2.3.1. Granular Termite Barrier (GTB), see sketches in attachment section for typical sections: A 100 mm (4-inch) minimum thickness granular termite barrier shall be installed under the concrete slab of the building. The GTB shall be placed under the vapor barrier and over the capillary water barrier (CWB) with a separation geotextile installed between the GTB and the CWB.

4-2.3.1.1. Exterior Perimeter Footings: When “stayform” is used to retain a vertical face along the inside of exterior footings, the bottom of the stayform shall be elevated 50 mm (2 inches) above the bottom of the footing to allow GTB material to migrate beneath the bottom of the stayform and separate the stayform and the subgrade. Along the outside edge of the footing, a minimum 100 mm (4-inch) wide, vertical GTB-filled-trench shall be provided. A root control fabric impregnated with plastic nodules containing trifluralin, Bio-barrier Root Control, or equal, shall be installed along the vertical interface between the GTB and the adjacent soil. The root control fabric shall provide continuous and effective root control for 15 years or longer. A cast-in-place concrete strip, 300 mm (12-inch) wide by 75 mm (3-inch) thick, with 5% transverse slope, shall be provided at the ground surface to cap the GTB strip. The concrete strip shall be reinforced with 6/6 X W2.0 X W2.0 WWF. Contraction joints shall be provided at maximum 4’-0” spacing.

4-2.3.1.2. The natural angle of repose of the GTB material is about 10H:3V when dry and 10H:3.75V when wet. Accordingly, GTB on sloping surfaces shall be placed at slopes no steeper than 3H:1V. This will require that the sloping faces of thickened-edge footings, including the under-side concrete fillet at edges of floor slabs, be designed with a batter no steeper than 3H:1V.

4-2.3.1.3. GTB Material Gradation.

| Sieve Size | Percent Passing |
|---|---|
| (4.75 mm) No. 4 | 100 |
| (2.36 mm) No. 8 | 95 - 100 |
| (2.00 mm) No. 10 | 75 - 95 |
| (1.70 mm) No. 12 | 35 - 50 |
| (1.18 mm) No. 16 | 0 - 10 |

4-2.3.1.4. GTB Material Requirements

| | |
|---|---|
| Rock Type: | Basalt |
| Specific Gravity (ASTM C 128): | 2.70 to 2.80 |
| SiO2 (ASTM C 289): | 45% Minimum |
| L.A. Abrasion, % loss, 500 Revolutions (ASTM C 131): | 20% Maximum |
| Moh Hardness Scale: | 5 to 6 |

4-2.3.1.5. GTB material installed shall be clean and free of debris, dirt or other non-GTB material/substances that would compromise the GTB effectiveness. When GTB is installed in layers, the surface of the layer receiving additional GTB material shall be clean. Previously installed material if not clean shall be removed and replaced prior to installing additional GTB material.

4-2.3.1.6. Penetrations through the GTB other than that necessary for utility pipes/conduits shall not be made unless approved. Pipes laid in GTB material shall not be encased in sleeves or wraps that may provide a hidden path for termites. All utility pipes beneath the floor slab shall be encapsulated in minimum 100 mm (4 inches) of GTB material.

4-2.3.1.7. GTB material shall be compacted using approved equipment and methods.

4-2.3.1.8. No structure or appurtenance that is not protected by GTB material shall be allowed to be in direct contact with the dwelling unit itself

4-2.3.1.9. The Contractor's Design Proposal shall include typical GTB installation details beneath the slab and at pipe penetrations.

4-2.3.1.10. The Contractor shall submit a CQC plan to limit GTB material displacement before and during concrete placement. This is to maintain GTB material integrity and thickness for protection against termite infestation, and to maintain structural integrity of slabs and foundations.

4-2.3.2. Capillary Water Barrier and Vapor Barrier. Except as indicated herein below, capillary water barrier and vapor barrier shall be placed beneath the concrete slab on grade. The capillary water barrier shall be 100 mm (4 inches) thick. The capillary water barrier material shall be a clean, crushed non-porous rock, crushed gravel or uncrushed gravel as approved. The maximum particle size shall be 40 mm (1-1/2 inches) and no more than 2 percent shall pass the 4.75 mm (No. 4) sieve. The capillary water barrier shall be compacted with a minimum of four (4) passes of a hand-operated, plate-type vibratory compactor. A vapor barrier shall be placed directly below the concrete slab and the GTB shall be installed under the vapor barrier but over a separation geotextile which is installed over the CWB layer.

The vapor barrier shall have the following properties:

Minimum 15-mil thick polyolefin geomembrane manufactured with ISO certified virgin resins.

| | | |
|---|---|---|
| Water Vapor Transmission Rate | ASTM E-96 | not exceeding 0.006 gr./ft2/hr. |
| Permeance Rating | ASTM E-96 | not exceeding 0.015 gr./ft2/hr. |
| Water Vapor Retarder | ASTM E-1745 | meets or exceeds Class B |
| Puncture Resistance | ASTM E-1709 | minimum 1970 grams |
| Tensile Strength | ASTM D-638 | minimum 45 lbf/in. |

Properties shall be verified by independent laboratory testing and result submitted for review. Installation of the vapor barrier shall be per manufacturer's instructions with the following as the minimum; joints shall be lapped a minimum of 300 mm (12 inches) and sealed with the manufacturer's recommended mastic or pressure sensitive tape. The vapor barrier shall be lapped over footings or sealed to foundations and walls. The contractor shall check the vapor barrier surface, seams and penetrations at columns and utilities for damage and discontinuities prior to the concrete slab placement. The check shall be performed in the presence of the Contracting Officers Representative.

Standing water on the vapor barrier shall be removed prior to the concrete slab placement. The GTB shall be dampened, free of drainable water, and compacted the day before vapor barrier placement. The general contractor shall protect all exposed GTB surfaces from ponding of water or rainwater by sealing any entry points in uncompleted slabs or in unroofed buildings.

The separation geotextile shall have the minimum requirements for Class 2 as specified in AASHTO M 288-96 for geotextile survivability requirements. AOS requirements shall be compatible with the GTB and CWB gradation to provide an effective separation.

4-2.4. Earthwork for Building and Utility Systems shall be designed and constructed in accordance with industry standards unless otherwise specified herein or as approved.

4-2.4.1. **Satisfactory Materials**. Imported satisfactory materials shall be free from stones larger than 75 mm (3-inches) in any dimension.

4-2.4.2. Excavation Permits. Prior to start of excavation work, the Contractor shall obtain excavation permits from DPW & Verizon. A copy of the permit is included in Attachment, USAGH Excavation Permit. Contractor shall complete the DPW "Excavation Clearance Requirements" and submit the completed form to the Contracting Officer and DPW in order to obtain the following:

a. "DPW Excavation Permit" for Water, Sewer, Storm Drainage, Electrical, Gas, Fuel lines, etc.

b. Excavation Permit for telephone lines (communications) from Verizon and DPW.

Contractor shall carry both permits at all times during excavation.

4-2.4.3. Disposal. Excavated material not required or not satisfactory for backfill shall be removed from the site and disposed of off base.

4-3 **EROSION AND SEDIMENT CONTROL.** Erosion and Sediment Control Facilities shall be required in accordance with EPA's Storm Water Management for Construction Activities, EPA Document No. EPA-833-R-92-001, Chapter 3, OR local Erosion and Sedimentation Control standards and codes, whichever is more stringent.

4-4 **DEMOLITION.** Existing facilities scheduled for demolition shall be as indicated on the attached concept design drawings. Materials not owned by the Government and not used in construction shall be disposed of off government property. Obtain required demolition permits and disposal permits as required from City and County of Honolulu and Hawaii State Department of Health.. Obtain approval of the disposal site from the contracting officer and submit haul tickets for material disposed of off of Government property.

4.4.1 Existing utilities within the project limits shall be adjusted, relocated or modified as required to remain functional. The Contractor shall coordinate all utility adjustment work with the appropriate utility agencies/departments. The area within the project limits, which does not involve new construction, shall be graded smooth to drain, and planted with grass. All existing walks, parking and streets, drainage and utility systems at the interface with the demolition shall be properly coordinated and new construction provided for the continued functionality, operation and maintenance of adjoining and remaining facilities and systems. All existing utility structure and related appurtenances, which will not be utilized in the project shall be removed and disposed of. Abandonment in-place shall not be permitted unless approved by the Contracting Officer.

4-5 **CLEARING AND GRUBBING.** Clear and grub all trees and vegetation necessary for construction; but, save as many trees as possible.

4-6 **WETLANDS.** Jurisdictional tidal and non-tidal wetlands have not been identified on the project site. Determination has been made that jurisdictional wetlands are not on the site.

4-7 **EARTHWORK.** According to "The Soil Survey of Oahu, State of Hawaii" by the United States Department of Agriculture Soil Conservation Service in cooperation with the University of Hawaii dated August 1972, the typical soil type consists of *Kunia Series*. This series consists of well-drained soils on upland terraces and fans, which developed in old alluvium. They are nearly level to moderately sloping, where elevations range from 200 to 300 meters. The mean annual rainfall amounts to 760 to 1,015 mm, most of which occurs from November to April. The mean annual soil temperature is 228 C.

The general soil type within Schofield Barracks is identified as *Kunia Silty Clay (KyA)*. In a representative profile the surface layer is dark reddish-brown silty clay about 560 mm thick. The subsoil, 1,015 to 1,800 mm thick, is dark reddish-brown silty clay and silty clay loam that has a subangular blocky structure. The substratum is dark reddish-brown gravelly silty clay. The surface layer is medium acid to extremely acid, and the subsoil is slightly acid to strongly acid.

Permeability is moderate, while runoff is slow and the erosion hazard is no more than average.

4-7.1 **Earthwork for Building and Utility Systems** shall be design and constructed in accordance with UFGS Section 02315, Excavation, Filling and Backfilling for Buildings and Section 02316, Excavation, Trenching, and Backfilling for Utility Systems, unless otherwise specified herein or as approved.

4-8 **BORROW MATERIAL.** Obtain borrow material required for construction from sources off government property.

4-9 **WATER DISTRIBUTION SYSTEM.** The water distribution system shall be designed in accordance with Army standards contained in TM 5-813-5, Water Supply Distribution Systems and Military Handbook Fire Protection for Facilities Engineering, Design and Construction, (Mil Hdbk 1008c); and as indicated herein or approved. Construction materials, execution and testing shall be in accordance with UFGS Section 02510A, Water Distribution System; and as specified herein or approved. Where the requirements of the Army standards and the requirements defined herein disagree, the more stringent shall apply. The contractor shall determine the domestic and the fire demands for the facilities and shall verify the design of all components of the domestic and fire protection supply systems. Design of a water distribution system requires both domestic and fire flow demands be considered concurrently.

4-9.1 **Analysis of Existing System Capacity.** The existing water system consists of a series of 150 mm and 100 mm water lines as well as 75 mm laterals. A 150 mm water main taps into a 450 mm main along Waianae Avenue and a 200 mm main along Foote Avenue. 100 mm potable lines branch off the 150 mm main at the center of the courtyard and tie into the building service laterals. Two 75 mm service laterals are provided and tie into the building locations. Two existing fire hydrants located at the southwest and northeast corners of the courtyard provide fire protection to the Quad. Preliminary analysis results indicate that existing 450 mm water main along Waianae Avenue cross-connected with the 200 mm line along Foote Avenue has sufficient capacity to meet the required domestic and hydrant fir flow for the project. However, upgrades to the on-site water system will be required to provide adequate flows and pressures to the facilities. The existing 150 mm water lines in the Quad are inadequate to supply the required fire flow and pressure to the existing facilities (with clear wells turned off). Proposed water system improvements should include the following:
300 mm connection and backflow preventers at the 200 mm waterline on Foote Avenue and 450 mm waterline on Waianae Avenue; provide a 200 mm waterline for a looped system within the courtyard; building potable service laterals and fire hydrants should be connected to the new 200 mm looped water main; water lateral connection to the new chiller plant; water lateral connections to the new covered gear wash facility; replace existing 75 mm potable service laterals servicing the buildings with 100 mm laterals; install fire hydrants within Quad C courtyard at the northeast and southwest corners; provide service connection and backflow preventer to the fire pump house; provide a 200 mm looped system from the pump house to the service fire sprinkler system; provide 2 post indicator valves along the looped system for isolation; provide one 150 mm fire sprinkler line at each building and a post indicator valve at each fire sprinkler connection.

4-9.2 **Connections to Water Mains and Building Service Lines**. Connection points shall be as indicated in the concept design site and utility plan. The contractor shall be responsible for the design of the sizes, and means of connections to the existing system based on Facility requirements and system conditions.

4-9.2.1 Connections to Water Mains. Design the connections to the installation water system including the meter assemblies and the necessary backflow-preventing devices. Fire protection system shall be considered as that part of the distribution system supplying fire hydrants, or fire hydrant laterals. Service connections supply water from the main to the building. Mains shall be looped with no dead ends and be of adequate size to satisfy both domestic and fire flow requirements. Minimum main size is 200 mm [8 in]. Sufficient sectional control valves shall be provided so that no more than two fire hydrants will be out of service in the event of a single break in a water main. A copper tracer wire shall be placed directly above all non-metallic mains when plastic marking tape does not provide means of determining alignment of pipe by metal detecting equipment.

4-9.2.2 Building Connections.

4-9.2.2.1 Service lines shall be engineered with building interior plumbing to insure that wide fluctuations in

pressure, water flow, and temperature do not occur. Meter head losses shall be included in design analyses hydraulic calculations for domestic services.

4-9.2.2.2 Building connection shall have an exterior shut off valve with valve box installed underground.

4-9.2.2.3 Service lines less than 80 mm (3 inches) shall be copper pipe and fittings, Type "K" or polyvinyl chloride (PVC). Piping 80 mm (3 inches) and larger shall be ductile or PVC unless other wised approved. PVC piping less than 100 mm (4 inch) diameter shall be schedule 80 with screw joint.

4-9.2.2.3 Backflow Prevention Device. Provide reduce pressure principle backflow prevention device for each building connection in accordance with C&C of Honolulu Standards BWS

4-9.3 **Trenches**. Water line trenches shall be of a depth to provide a minimum cover of 1 m (3 ft.) in areas subject to vehicular traffic and 0.70 m (2.5 ft.) in all other areas from the existing ground surface, or from the indicated finish grade, which ever is lower, to the top of pipe. Sufficient cover must also be provided to protect the pipe against structural damage due to superimposed surface loads. Lines installed with less cover than the minimums stated shall be concrete encased with a minimum concrete thickness of 150 mm [6 in].

4-9.4 **Fire hydrants**. Two fire hydrants shall provide as indicated on the Concept Design Drawings. Fire hydrants shall be compatible with those presently in use at the installation, with similar pump and hose connections. The maximum amount of flow that can be permitted shall be determined. Fire hydrant spacing shall be no greater that 150 m [500 ft] apart by paved road. In addition, a hydrant shall be provided so that all parts of the facilities can be reached by hose lines not over 105 m [350 ft] long. All distances shall be calculated along the closest route that the fire apparatus must travel (i.e.; along the curb or access lane). Each hydrant may account for a maximum of 95 liters per second [1500 gpm] of fire protection regardless of existing pressures or water line capacity. A fire hydrant shall be located within 15m [50 ft] from any fire department connection provided. Hydrant laterals shall be 150 mm [6 in] minimum size, and shall not exceed 15 m [50 ft] in length, and shall have an underground shutoff valve. Valve box, at each lateral, shall be located within 3 m [10 ft] of the hydrant, and shall not be located where obstructed by parked vehicles, shrubbery, etc. Guard post barriers shall be provided where hydrant locations are subject to vehicle damage.

4-9.4.1 Type and Nozzles. Fire hydrants shall be wet-barrel with one 4-1/2 inch and two 2-1/2 inch outlets, with the center of hose outlets a minimum of 0.45 m (18 inches) above finish grade. Each hydrant shall be furnished with a quick-coupler type adapter for the 115-mm (4.5-inch) outlet. Each hydrant supply shall be provided with minimum 6" connection through shutoff valve and isolation valve box.

4-9.4.2 Hydrant locations along streets shall be identified with approved raised blue pavement reflector markers offset 100 mm (4 inches) towards the hydrant from the road center

4-9.4.3 Hydrant Color. Exact color to be coordinated with the Contracting Officer.

4-9.4.4 Pipe Guards. Hydrants located adjacent to parking and roads shall be protected with 100 mm [4-inch] diameter x 1.2 m [4 feet] high concrete filled pipe guards. Pipe guard materials and installation requirements shall be in accordance with Department of Water Supply, Approved Material List and Standard Details for Water System Construction, Standard Detail 33.

4-9.5 **Shutoff Valve**. Each building shall be provided with a separate service and main shutoff valve, readily accessible to maintenance and emergency personnel. Shutoff valves in walks are prohibited.

4-9.6 **Metering.** Meters shall be provided to allow the monitoring of water consumption . Meters shall be remote sensing ready adequately sized to meet the building water flow and pressure demand. Maximum velocity shall be 10 feet per second. Meters shall be located in accessible areas out of the way of vehicular traffic. Special requirements are as follows.

4-9.6.1 Meter shall be of one manufacturer and of the same model for a given size. Meter shall be of the

displacement or vertical turbine type conforming to AWWA C701 Class II unless otherwise specified or approved. Meters shall be sized and of the appropriate type to insure adequate service pressures and flow can be maintained within manufacturer sizing recommendations. The main casing shall be bronze with stainless steel external fasteners. Registers shall be straight -reading type, shall be permanently sealed and shall read in U.S.-gallons. Digital indicator-totalizer shall be sealed and magnetically coupled with the driving mechanism. A leak detector hand shall be provided to indicate very low flow (due to leakage). Connections shall be suitable to the type of pipe and conditions encountered. Register type shall be an encoder-type remote register designed in accordance with AWWA C707. Remote mounting adapter kit with up to 15.24m (50 ft) of cable shall be used to connect the water meter to the remote sensor on the building. Meters shall comply with the accuracy and capacity requirements of AWWA C701. The method of remote monitoring must be coordinated with installation utility systems.

4-9.6.2 Meter Boxes. Meters shall be installed in approved meter boxes or vaults large enough for the installation of a shut off valve and meter and shall be large enough for easy maintenance and removal of meters. Meter registers shall be readily readable with reading ports in box covers provided. Shut off valves shall be provided on each side of meters. Straight pipe sections shall be provided when recommended by the manufacturer. Meters larger than 50 mm (2 inches) shall be provided with bypass line and valve of approved size. Meter boxes set in paved areas subject to vehicular traffic shall be cast iron, or concrete with cast iron lid and cast iron meter reader lid. Boxes set in sidewalks, not subject to vehicular traffic, shall be concrete with cast iron lid and cast iron meter reader lid. Plastic boxes and lids shall not be used. Box height shall extend from invert of the meter to final grade at the meter location. The lid shall have the word “WATER” cast in it.
4-9.6.3 Contractor shall as directed provide to the Contracting Officer for turn over to DPW a minimum of one-meter splice and one spare meter each size installed in this project.

4-9.7 **Water Mains**.

4-9.7.1 Materials for Fire Protection Distribution Main Extension. Materials for the water main shall be in accordance with Army and DPW installation standards. Mains shall be considered as that part of the distribution system that supply fire hydrants. Minimum main size shall be 200 mm (8 inches). Mains shall be ductile iron or Polyvinyl Chloride (PVC). All ductile iron pipes and fittings, to include couplings and valves, shall be wrapped with 8-mil thick polyethylene encasement per AWWA C105. All mains shall be provided with commercial plastic marking tape specifically manufactured for this use. Tracing wire shall be copper solid #10 and shall extend in to valve box stations.

4-9.7.2 Water Main Clearances to Sewers. Water mains shall be laid horizontally 3 m (10 feet) or more from sanitary sewers. Exception is where the bottom of the water pipe is a minimum of 450 mm (18 inches) above the sewer pipe top, in which case, the horizontal separation shall be 1.8 m (6 feet) or greater. Service lines shall have a minimum vertical separation of 300-mm (12 inches) above sewer laterals unless otherwise approved. Where water mains cross within 450 mm (18 inches) above or any distance below gravity flow sanitary sewer lines, the sewer pipe shall be encased with an approved reinforced concrete jacket of 150 mm (6 inch) minimum cover around the pipe to a distance of 3 m (10 feet) horizontally from the water line. Encasement shall start and end at sewer pipe joints.

4-9.8 **Economic Analysis**. Deleted.

4-9.9 **Field Quality Control for Water Distribution**. The contracting officer will conduct field inspections and witness field tests specified. The contractor shall perform field tests, and provide labor, equipment, and incidentals required for testing. Water needed for field tests will not be furnished by the government. Do not begin testing on any section of a pipeline where concrete thrust blocks have been provided until at least 5 days after placing of the concrete.

4-9.10 **Bacteriological Disinfection**. Before acceptance of potable water operation, each unit of completed waterline shall be disinfected in accordance with UFGS Section 2510, Water Distribution System and

AWWA C651 unless otherwise specified herein or approved. From several points in the unit, the Contracting officer will take samples of the water in proper sterilized containers for bacterial examination. The unit will not be accepted until satisfactory bacteriological results have been obtained. Contractor shall be responsible for neutralization of and proper disposal of testing and disinfection waters in accordance with State of Hawaii and Tripler Army Medical Center, Preventive Medicine Office, regulations, etc. The chlorinated water may be used for watering grassy areas if the chlorine concentration is reduced to that of drinking water.

4-9.11 **Lead Residual**. Following the bacteriological disinfection and testing, the system shall be flushed with a sufficient velocity of water and sufficient tests performed at each hot and cold water discharge point until no more than 15 ppb lead residuals remain in the system. All test and samples shall be performed in accordance with state and, if applicable, Federal regulations. Samples for testing are to be collected after a 6-hour continuous period of no flushing, and will be considered first draw samples. The commercial laboratory shall be certified by the state's approving authority for examination of potable water. Lead residual tests results shall be submitted to the Contracting Officer. The system will not be accepted until satisfactory bacteriological results and lead test residual test results have been obtained. All flushing and testing for lead residuals, including.

4-9.12 **Interruption of Water Supply**. Contractor shall inform the Contracting Officer a minimum of 45 calendar days in advance of any interruption of service in the existing water system. Valves shall be closed and opened only by DPW authorized personnel unless otherwise approved in writing. Maximum outage shall be 6 hours unless otherwise directed by the Contracting Officer.

4-9.13 **Pressure Reducing Valves**. Main line pressure reducing valves are not required in this project.

4-9.14 **Backflow Protection**. Potable water supplies to fire protection systems, including but not limited to stand pipes and automatic sprinkler systems, shall be protected from backpressure and back siphonage by a double check valve assembly. The valve assembly shall be located down stream of the post indicator valve and before the building riser pipe connection. Double check valve assembly shall in accordance with AWWA C506 and NFPA 24. Valve assemblies shall be of one manufacturer and of the same model for a given size. Domestic and irrigation water systems shall be protected by Reduced Pressure Backflow Preventers.

4-9.15 **Post Indicator Valves**. Every connection from a private fire service main to a building shall be provided with a listed indicating valve so located as to control al sources of water except fire department connections unless other wise approved by the authority having jurisdiction. Post indicator valves shall be located not less than 12.2 m (40 ft) from buildings. When necessary to place a valve closer to a building, the indicator post shall be located at a blank part of a wall.

4-10 **SANITARY SEWERAGE SYSTEM.**

Analysis of Existing System Capacity. Quad C is serviced by a series of 150 mm and 200 mm sewer lines, which collect the wastewater generated on site. The effluent is collected in a manhole located within the courtyard and directed northeast toward Waianae Avenue (SMH S300-50 via a 300 mm sewer main. From SMH S300-5 to SMH S200-2 along Waianae Avenue, the existing sewer main is only 200 mm in diameter. The draft Sewer Infrastructure Study (June 2001) for Schofield Barracks indicates that these lines are inadequate under peak flow conditions. Improvements shall include the following: Replace the existing 200 mm sewer line along Waianae Avenue (between SMH S300-5, S200-1 and S200-2) with a 300 mm sewer line; replace existing building sewer laterals with new 150 mm laterals and provide new sewer manholes and cleanouts as required; Replace existing 150 mm sewer line in courtyard with a new 200 mm line. Provide sewer lateral connection to new covered gear wash. Sediment trap/ basin shall be provided at gear wash facility. Wastewater effluent shall be directed to the sewer system. The existing 150 mm sewer main between sewer manhole S300-19 and S300-15, which recently had CIPP, shall remain (Russell Leong, DPW 6-01).

.

4-10.1 Building Sewer Laterals and Connections. Laterals and building connections shall be designed and constructed in accordance with U.S. Army Corps of Engineers Technical Instructions TI 814-10, Wastewater Collection , UFGS standards and the latest edition of International Plumbing Code. Minimum diameter for laterals shall be 150 mm [6 in] while maintaining a minimum velocity of 45 meters per minute [2.5 fps]. Minimum pipe slope for 160 mm [6-inch] shall be 0.6 percent. Lateral shall be sized based upon fixture unit flow.

4-10.1.2 Laterals shall use standard "wye" fittings. Cleanouts shall be provided at all junctions and major bends as directed.

4-10.1.3 Cleanouts shall be 6" cast iron pipe. They shall be installed on all building connections to provide a means for inserting rods in to the underground pipe and installed flush with the finish ground to preclude damage to mower equipment and tripping. Two-way cleanout shall be provided at building connections to permit complete rodding of the building connection. Preferably the cleanout will be of the same diameter as the building sewer, and never smaller than 150 mm (6-inches). Cleanout cap shall be recess type. Cleanout tops in grassed areas shall be provided with a 375 mm (15 inch) square by 150 mm (6 inch) thick concrete collar reinforced with #3 rebar on all sides.

4-10.2 Trenches. Sewer and water lines, mains or laterals, shall be placed in separate trenches. The separate trenches shall maintain a minimum lateral separation of 3m [10 ft].

4-10.3 Minimum Sewer and Water Distribution Pipe Separation Requirements. Parallel water and sewer pipe and crossings between water and sewer pipe shall be in accordance Chapter 4, Site Engineering, sub para. Water Main Clearances to Sewer.

4-10.4 Cover. Coordinate with building connection requirements. To prevent the pipe from being crushed by construction vehicles and the design vehicle, the minimum cover above the top of pipes shall be 750mm [30 in] unless pipe materials are used and/or unless the pipe is concrete encased with a minimum of 150 mm [6 in] thickness of concrete.

4-10.5 Pipe Material for Sewer Laterals. Pipe material for laterals shall be plastic pipe with minimal pipe joints.

4-10.6 Manholes. Manholes shall be constructed of concrete or precast concrete manhole sections with minimum 30" access openings. Ladders shall be stainless steel.

4-10.6.1. Precast manholes shall have eccentric cone tops to permit vertical descent within the manhole.

4-10.6.2 Manholes shall have essentially watertight walls and pipe connections to control ground water infiltration.

4-10.6.3 Manholes deeper than 900 mm (3 feet) shall have stainless steel ladders, Type 316 Stainless Steel (SS).

4-10.6.4 Each new or modified manhole that is located in roads or grass areas that are located in low areas subject to flooding shall be installed with manhole cover inserts to prevent inflow of rainwater; reduce manhole rattling and flipping due to street traffic; and prevent dirt and debris form entering collection system through manhole cover. Manhole insert material and dimensions shall be in accordance with City and County of Honolulu Standards and as specified herein.

4-10.6.4.1 The inserts shall be made of corrosion proof material suitable for atmospheres containing hydrogen sulfide and diluted sulfuric acid as well as other gases associated with wastewater collection. The

body of the material shall be made of high density polyethylene co-polymer, or approved equal that meets ASTM Specifications Designation D1248, Class A, Category 5, Type III, equal to Marlex HXM 50100 (extra high molecular weight hexene co polymer).

4-10.6.4.2 The manhole inserts shall have a minimum impact brittleness temperature of 105 degrees Fahrenheit or less The thickness shall be uniform 1/8-inch or greater. The material shall be firm enough such that the inserts will not fold and fall into the manhole due to any accumulation of debris and water. It shall also be resistant to environmental stress cracking.

4-10.6.4.3. The gasket shall be made of closed cell neoprene. The gasket shall have pressure sensitive adhesive on one side and be placed under the weight bearing surface of the manhole insert by the manufacturer. The adhesive must be compatible with the insert material to form a long lasting bond in wet or dry conditions.

4-10.6.4.4 A lift strap shall be attached to the rising edge of the bowl of the manhole inserts with a stainless steel rivet. The lift strap shall be made of one-inch (1") wide, woven polypropylene web and sheared on all cut ends to prevent unraveling. The inserts shall be sized to fit City and County of Honolulu Standard Type SA manhole frame and covers.

4-10.6.5. New manholes should be located to avoid bends 90 degrees or larger.

4-10.6.6 Drop Manholes, if required, shall be in accordance with City and County of Honolulu standards.

4-10.6.7 Abandoned Manholes and Sewer lines. Abandoned sewer lines should be plugged with concrete at each end. The concrete plug shall extend from the manhole to a minimum 0.6 m (2 ft.) into the abandoned line. Abandoned manholes shall have the bottoms cracked to permit subsurface water drainage though the bottom. The manhole shall be backfilled with (a) compacted granular material, base course or S4C or (b) lean concrete. The manhole cover should be completely removed along with the manhole cone or the upper 1 m or (3 ft.) for cast-in-place manholes.

4-10.7 Pipe material for sewer mains and laterals shall be plastic pipe within minimal pipe joints

4-10.8 Field Quality Control for Sanitary Sewer Distribution System. The contracting officer will conduct field inspections and witness field test specified. The contractor shall perform field tests, and provide labor, equipment, and incidentals required for testing. Water needed for field tests will not be furnished by the government.

4-10.9 Interruption of Sewer System. Contractor shall inform the Contracting Officer a minimum of 45 calendar days in advance of any interruption of service in the existing sewer system. Maximum outage shall be 6 hours unless otherwise directed by the Contracting Officer.

4-10.10. Sewer Pipe Joints. Sewer mains within the tree drip line shall be wrapped at the joints with a 'bio' or root type barrier membrane. Root barrier shall be suitable for pipe joint wrap application and shall be installed in accordance with the manufacturer's specifications.

4-11 **STORMWATER MANAGEMENT SYSTEMS.** The storm drainage system shall be properly coordinated with surrounding properties to ensure that runoff does not cause damage to other

properties. All storm water management calculations shall be based upon a 10-year storm frequency. Design storm water management systems in accordance with the applicable requirements of "Controlling Urban Runoff: A Practical Manual for Planning and Designing Urban BMPS", by the Department of Environmental Programs or in accordance with the requirements of the agency having jurisdiction. The calculation of runoff and the evaluation of existing storm sewer drainage systems shall be as described herein paragraph entitled "Grading and Drainage". Obtain required permits from the agency having jurisdiction prior to construction. Coverage by a National Pollutant discharge elimination System (NPDES) General permit for Storm Water Associated with Construction Activities shall be obtained.

4-11.1 Analysis of Existing System Capacity. The Quad C elevations range from 262.4 meters to 263.3 meters with the low point of the site being the south corner of the complex between Buildings 357 and 358. Presently, the accumulated runoff generated on-site is collected through a series of curb inlets and drain lines and directed to a drain manhole located along Foote Avenue. In addition, downspout roof drains tie into the drainage system at various locations throughout the site. The existing storm drainage system consists of 100 mm; 200 mm and 300 mm drain lines, which are considered to be inadequate.

4-11.2 Storm Water Retention/Detention System for Volume Control. Not required/applicable.

4-11.3 Storm Water Retention/Detention System for Runoff Treatment. Not required/applicable.

4-12 **GRADING AND DRAINAGE.**

Storm drainage system design shall be designed in accordance with City and County of Honolulu Storm drainage Standards and as specified herein or approved. Construction materials, execution and testing shall be in accordance with UFGS/CEGS Specification Section 2630a, Storm Drainage System; and as specified herein or approved.

4-12.1 The proposed drainage improvements should include the following (drain line sizes provided are preliminary and should be verified by the civil designer):

System design and capacity requirements should accommodate 10-year design flows.
Install new 150 mm downspout laterals and cleanouts, as required.
Install new 200 mm downspout drain line at the building perimeters. Downspout laterals should tie into new 200 mm downspout drain line at designated points along the building perimeters.
Remove and replace existing curb inlets within Quad C.
Install new 300 mm, 450 mm and 600 mm drain lines, as required to provide for adequate drainage of the site. Install additional drain inlets, as required.

4-12.2. Connections to Existing Systems. Connections to existing systems shall be made at locations as indicated on the drawings or as approved.

4-12.3. Grading and drainage design shall be properly coordinated with surrounding properties and facilities to insure that runoff do not cause damage outside of the project limits. Existing drainage patterns shall be maintained as much as practicable.

4-12.4. Sumps and low points where water ponds shall be avoided whenever practical so as to preclude

flooding of buildings and roads when design capacities of drainage systems are exceeded. Where sumps can not be avoided, higher design capacities may be directed for systems draining the sumps and positive overland flow relief provided to preclude flooding of dwelling units and critical utility appurtenances such as electrical transformers.

4-12.5. Inlets and Manholes.

4-12.5.1. Materials shall be of cast-in-place reinforce concrete or pre-cast reinforced concrete sections. Precast manholes shall have eccentric cone tops to permit vertical descent within the manhole.

4-12.5.2. Locate manholes or inlets at intersections, changes in alignment or grade or size, at junctions with laterals of branches or wherever entry for maintenance is required. Storm drain inlets shall be located so that no collection swales flow across a street or sidewalk to reach a storm drain other than where cross gutters are used. For streets and roadways, side opening catch basins are preferable. Distance between points of entry will not be more than 90 meters (300 feet) for conduits with a minimum diameter smaller than 30 inches and up to 150 meters (500 feet) for diameter 30 inches or larger.

4-12.5.3. Inside dimensions of manholes will not be less than 0.760 meter (2.5 feet). Inside dimensions of inlets will provide for not less than 75 mm (3-inches) of wall on either side of the outside diameter of the largest pipe involved or not less than 0.760 meter (2.5 feet), which ever is greater.

4-12.5.4. Manhole frame and cover shall be round will a minimum clear opening of 760mm (30 inches).

4-12.5.5. Manholes and inlets deeper than 900 mm (3 feet) shall have a fixed stainless steel ladder, Type 316 Stainless Steel (SS).

4-12.6. Open ditches and channels are not allowed unless specifically approved. Grassed swales shall have a one (1) percent minimum invert slope unless the invert is paved with and approved concrete lining. Open areas shall be drained by field inlets and an underground collection system, utilize existing system as much as possible. Overland flow shall be held to a minimum. Swales shall have cross-sections that do not restrict the use of powered mowing equipment.

4-12.7. All streets shall be crowned or sloped to drain. Concrete gutters shall be provided on both sides of streets. Street drain inlets shall be curb opening type. Drop inlets with grates are not allowed.

4-12.8. Maximum Gutter Flow. Maximum flow in all gutters shall be restricted to the quantity, which will cause flooding of 1/2 of the adjacent traffic lane at the design storm. When this flow is reached, it shall be intercepted by catch basins and removed to an underground drainage system.

4-12.9. Minimal size for drain pipes along roadways and vehicle traffic areas shall be 450 mm (18-inches) and pipe material reinforced concrete. Minimal pipe size for all other areas shall be 300 mm (12-inch) and

materials shall be reinforced concrete pipe, schedule 40 PVC pipe, or smooth interior corrugated polyethylene pipe. For corrugated polyethylene pipe, the couplings joints shall be the watertight type.

4-12.10. Storm Runoff Calculation. Storm runoff shall be calculated with consideration for the following:

4-12.10.1 Select design values to be used in the storm drainage design calculations, including rainfall intensity, drainage area, and runoff coefficients.

4-12.10.2 Select storm drainage plan with respect to planned connections to the existing storm drainage system, when applicable.

4-12.10.3 Alternate schemes considered in arriving at selected storm drainage plan.

4-12.10.4 Principal means of collection and disposal of storm water in the new storm drainage system. Include calculations for runoff, sizing of pipe and drainage structures (inlets and drainage control structures and roof drainage pipe).

4-12.10.5 Method proposed for handling roof runoff from gutter downspouts (roof drain collector system into drainage system).

4-12.10.6. Connections of building's mechanical drains to outside drainage system, where applicable, and cross referencing to the appropriate section and design discipline, when required.

4-12.11 Specific Storm Drainage Criteria.

A 10-year 1-hour intensity design storm shall be used to calculate the runoff. The time of concentration (Tc) for storm drainage system shall be no less than 10 minutes for paved areas and 20 minutes for turfed areas. Runoff shall be controlled by a storm drainage system properly designed to eliminate erosion.

Storm drainage systems will be so designed that the hydraulic gradeline for the computed design discharge in as near optimum depth as practicable and velocities are not less than 0.760 m/s2.5 feet/s when drains are one third or more full.

4-12.12 Sidewalk Culverts. Sidewalk culverts are not permitted.

4-12.13 Materials. All materials shall be in accordance with the criteria indicated above.

4-12.14 Field Quality Control for Storm Drainage System. The contracting officer will conduct field inspections. Testing procedures and requirements shall comply with the requirements indicated above.

**4-13 PAVEMENT DESIGN CRITERIA. For bidding purposes, the pavement design shall be in**

**accordance with the preliminary soils report. The final soils report by the successful bidder will determine the final pavement design. Concrete curb and curb/gutter shall be as shown on the drawings and this RFP. For streets and roads, the design vehicle traffic and anticipated volume will be given to the successful bidder.**

4-14 **PERMIT REQUIREMENTS.** Timely acquisition of all the necessary design and construction related permits shall be the responsibility of the contractor. As some permit process times take 6 months or more, the Contractor, upon notice to proceed, shall immediately begin working on the permits so as not to delay completion of the project. The following permits have been identified as being required for this project: State Department of Health Individual Wastewater Permit, U.S. Army Garrison Hawaii, Excavation Permit, Demolition Permit, County of Hawaii Disposal Permit and any other permits as required by the installation, County and State Government.

**4-15 GAS DISTRIBUTION SYSTEM**.

4-15.1 General: The site gas distribution system shall be coordinated with The Gas Company. The site gas system shall be sufficiently sized for the central plant hot water generation system and the Dining Facility, Bldg. 357.

**4-16 HEATING HOT WATER AND CHILLED WATER DISTRIBUTION.**

4-16.1 General: TI 810-32, Heating and Cooling Distribution Systems provides baseline design criteria, standards, policy and guidance for the design of the heating hot water and chilled water distribution systems. Designs shall be compatible with existing construction provided this does not conflict with criteria, standards and policy in TI 810-32.

4-16.1.1 Codes: Electrical systems and installation requirements shall adhere to the current editions of UFGS 02555A, Prefabricated Underground Heating/Cooling Distribution System.

4-16.1.2 Standards: All materials and appurtenances provided under this contract shall be suitable for the intended application and shall conform to the current edition of applicable standards of references indicated in UFGS 02555A, Prefabricated Underground Heating/Cooling Distribution System.

Where no such standards exist for any product provided under this contract, the Contractor shall demonstrate the suitability of the product, for the application intended, to the satisfaction of the Contracting Officer.

4-16.3 Calculations and Diagrams: Complete plans and diagrams shall be provided with calculations of flow and pressure. Diagrams, calculations, and drawings shall be prepared under the supervision of a United States registered professional mechanical engineer.

4-16.3.1 Pipe size: The size of pipe shall be selected such that flow velocity not exceed 2.13 m/s (7 fps).

4-16.4 Buried Pipes

4-16.4.1 Thrust Blocks: Thrust blocks shall be provided at any change in pipe direction. Thrust blocks shall be designed and shall be of sufficient size to prevent movement of the pipe due to change in flow.

4-16.5.1.2 Direct Buried Pipes: Pipes shall be prefabricated, insulated pipes with steel carrier pipe and PVC jacketing. Where bottoms of trenches comprise materials other than sand or stone-free earth, 76 mm (3-inch) layers of sand or stone-free earth shall be laid first and compacted to approximate densities of surrounding firm soil before installing ducts in direct-contact tiered fashion. Joints in adjacent tiers of duct shall be vertically staggered at least 152 mm (6 inches). The first 102 mm (4-inch) layer of backfill cover shall be sand or stone-free earth compacted as previously specified.

4-16.5.1.3 Duct Line Markers/Plastic Marking Tapes: Duct line markers shall be provided at the ends of

long pipe runs or for other piping whose locations are indeterminate because of changes in direction or terminations at completely below-grade structures. A 5-mil brightly colored plastic marking tape not less than 152 mm (6 inches) in width and suitably inscribed at not more than 3048 mm (10 feet) on centers with a continuous metallic backing and a corrosion resistant 1-mil metallic foil core to permit easy location of the pipe, shall be placed approximately 305 mm (12 inches) below finished grade levels of such lines.

**4-17 STEAM DISTRIBUTION.** Deleted..

**4-18 FUEL OIL STORAGE AND DISTRIBUTION.** Deleted..

**4-19 LIQUEFIED PETROLEUM GAS STORAGE AND DISTRIBUTION.** Deleted.

# CHAPTER 5

## ARCHITECTURAL DESIGN

**5-1 DESIGN GOALS.** Overall architectural goals for the Whole Barracks Renewal Brigade Complex QUAD C are to provide a functional, visually appealing campus of facilities that is a source of pride for residents, other facility users, and the installation. This chapter applies to all buildings under this RFP unless specifically noted otherwise.

5-1.1.1 The architectural floor plan is established and approved as shown in the RFP Concept Design Drawings. All architectural criteria must be met and accounted for, see paragraph 5-2 Applicable Codes and Standards. Any changes shall be brought to the attention of the Contracting Officer for resolution in writing.

5-1.1.2 Furnishings, Fixtures and Equipment (FF&E): FF&E is part of this project. Fixtures and Equipment (lighting, plumbing, mechanical equipment, etc.) described for programmed spaces shall be provided by the offeror as part of the base bid. Interior Furnishings (tables, chairs, sofa, bed, etc.) will be Government furnished and installed. Refer to SOW Chapter 2, para. 2-1.7 for scope of Furnishings, Fixtures, and Equipment that will be required to be provided by the offeror. Any furniture layout depicted in the RFP concept design drawings will be adhered to and not deviated from without approval of the customer. The number and location of furnishings serve as an indicator of the number of power, data and communications connection points. See electrical section for more detail.

5-1.2 **Existing Quad Building Background and New Space Planning Intent**
The existing Quad consists of four buildings-three stories each - constructed in 1917. The buildings were originally open sleeping and living spaces and until recently, a mixture of office and living spaces.

5-1.2.1 Building 355: ground floor will be used for heavy equipment storage for four medium and one large Company Operations Facilities (COFs). The second floor is designated for the Administration Offices for three medium COFs. The third floor is designated for the Administration Offices for one medium COF and one large COF. Also, the third floor will contain the existing refinished Gymnasium. The total area of Building 355 is approximately 6,160 SM.

5-1.2.2 Buildings 356 and 358: is reserved exclusively for Unaccompanied Enlisted Personnel Housing (UEPH), Laundry Room, and Game Room. It will have 50 sleeping rooms per floor for a total of 150 rooms per building. The total area of Building 356 & 358 is approximately 6,820 SM per building.

5-1.2.3 Building 357: ground floor will be designated as the Dining Facility; the space includes: Kitchen, sit down dining area, and dining support spaces. The second floor will have Soldier Support Services, Soldier Community Functions, Troop Aid Station, COF Restroom facilities, Dining area, and Classrooms. The third floor will contain the Battalion HQ functional spaces and Battalion Restroom facilities. Building 357 is approximately 6,966 SM.

5-1.2.4 The selected offeror will be required to demolish all of the existing interior partitions as well as the complete flooring system in the toilet and shower areas. Also, the selected offeror will be required to determine the location of existing partitions with respect to the proposed Concept Design Drawings, in order to remove as required. This may include concrete masonry walls that are not structural. The roof structure and roofing will also have to be removed for Buildings 356, 357, and 358. All buildings will require the removal of existing windows and doors and provide a larger opening to install new fenestrations (door & windows) as designed to meet the approval of State Historic Preservation Office (SHPO). Adjacent wall finishes, both interior and exterior shall match the existing surfaces before the new windows are installed. Additionally, all existing plumbing, mechanical and electrical items need to be removed as indicated.

5-1.2.5 The Quad C building renovation design intent is to follow the Department of the Army Facilities Standardization Program for a Standard Company Operations Facility, Battalion Headquarters, and Dining

Facilities.

5-1.3 **Exterior Design Objectives**. Design buildings to enhance the visual environment of the installation. Exterior materials, roof forms, and detailing shall comply with the Installation Design Guide and concept design drawing, and shall be compatible with the immediate local context. Use durable, low-maintenance materials.

5-1.4 **Interior Design Objectives**. Arrange spaces in an efficient, functional manner. Provide simple circulation schemes that allow easy way finding within buildings. Use durable materials and furnishings that can be easily maintained and replaced. Maximize use of day lighting and operable windows. Use interior surfaces that are easy to clean and light in color; avoid trendy or bright color schemes. Provide telephone/data jacks on multiple walls to allow optional locations for furniture. Structure interior spaces to allow maximum flexibility for future modifications; companies and battalions often change size or mission, requiring reconfiguration of facilities. Refer to SOW Chapter 14-Comprehensive Interior Design for detailed information and CID Package requirements.

5-1.5 **Material and Product Selection Criteria**. Materials shall meet the requirements of the SOW. The SOW includes a range of specificity: some material requirements are specific (no option); other material requirements allow a range of options. The SOW requirements establish a minimum quality level.

**5-2 APPLICABLE CODES AND STANDARDS**. Except as specified otherwise in the RFP, design and construction of facilities shall comply with the latest editions (as of the date of the RFP) of the following. Major criteria and references for building design are as listed but not limited to this list. Additional requirements are included throughout the RFP.

5-2.1 National Fire Codes, published by the National Fire Protection Association (NFPA), including NFPA 101 Life Safety Code.

5-2.2 International Building Code (IBC), 2000

5-2.3 Americans With Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG), 1998.

5-2.4 Unified Facilities Criteria (UFC) 4-010-01 Department of Defense Minimum Antiterrorism Standards for Buildings July 31, 2002.

5-2.5 AR 190-11, Physical Security of Arms, Ammunition, and Explosives, Change 1, Appendix G, para G-2.

5-2.6 American Architectural Manufacturer's Association (AAMA)

5-2.7 Architectural Woodworking Institute, AWI Quality Standards

5-2.8 Builders Hardware Manufacturers Association, ANSI/BHMA

5-2.9 Underwriters Laboratories.

5-2.10 Tile Council of America (TCA) Handbook for Ceramic Tile Installation.

5-2.11 The Schofield Barracks Installation Design Guide (IDG), excerpts of which are included in an appendix to the Statement of Work.

5-2.12 UFC 3-600-01 Design: Fire Protection Engineering for Facilities (17 April 2003)

5-2.13 TI 800-01, Design Criteria, 20 July 1998

5-2.14 UFC 1-200-01, Design: General Building Requirements, July 31, 2002

5-2.15 Department of the Army Facilities Standardization Program, Standard Company Operations Facility, Dated February 1994.

5-2.16 Department of the Army Facilities Standardization Program, Standard Design for Brigade and Battalion Headquarters Facility, Dated August 1995.

## 5-3 IBC OCCUPANCY AND BUILDING TYPE CLASSIFICATIONS.

5-3.1 **General**. Occupancy classifications, construction types, allowable areas, maximum building heights, and fire separation requirements shall comply with the requirements of the International Building Code. Prior to issuance of the RFP, the design district shall coordinate with the authority having jurisdiction to determine occupancy classifications. Consult with the users to determine the hazard classification of items to be stored in the supply spaces.

5-3.2 **Construction**: All four building are Type II-A structures. All structural components, floor construction, bearing walls, and the roof shall be constructed of one-hour fire resistive construction.

5-3.3 **Occupancy Classification.** The IBC occupancy classification for the quad is as follows. Buildings 356 and 358 are both a Group R-2 occupancy. Building 355 is a mixed occupancy. The first floor is a Group S-1. The second floor is a Group B and Group S-1. The third floor is a Group A-3 and a Group B. Building 357 is also a mixed occupancy. The first floor is a Group A-2 and Group B. The second floor is a Group B and Group S-1, and the third floor is a Group A-3, Group B, and S-1.

5-3.4 **NFPA Classification**. The NFPA 101 classification for the quad is: Buildings 356 and 358 are both New Apartment Building occupancies. Building 355 is a mixed occupancy. The first floor is a Storage occupancy. The second floor is a New Assembly occupancy, New Business occupancy and a Storage occupancy. The third floor is a New Assembly occupancy, and a New Business occupancy. Building 357 is also a mixed occupancy. The first floor is a New Assembly occupancy, and a New Business occupancy. The second floor is a New Business occupancy and a Storage occupancy, and the third floor is a New Assembly occupancy.

5-3.5 **UEPH Buildings**. Occupancy classification: Residential R-2.

5-3.6 **Company Operations Facilities** Occupancy classification of administrative areas, and locker room facilities serving less than 50 occupants: Business Group B. Common Locker Rooms for 50 or more occupants: Assembly Group A-Division-3. Occupancy classification for supply areas: Storage Group S, Division 1 (or Division 2- verify contents of space with user).

5-3.7 **Battalion Headquarters**. Occupancy classification of administrative areas: Business Group B. Occupancy classification of classroom areas: Assembly Group A-3.

## 5-4 EXTERIOR DESIGN.

5-4.1 **General** the buildings are considered historical and any exterior construction shall be sensitive to the original design. See the Historic Narrative for detailed narrative on the historic importance, general design intent and requirements, see SOW 15. The exterior design should closely replicate the original 1917 design. The Concept Design Drawings contrast the original design where the building must

conform to NFPA 101, Life Safety Code. Some of the areas include the exterior stairways; rated partitions and doors are added to enclose the stairs. Also, some window and door openings were removed to provide a separation when enclosing the stairs was not practical.

5-4.2 **Acceptable Materials and Colors**. Exterior elements of the facilities shall comply with the attached architectural concept design drawings and the Installation Design Guide (IDG) unless required otherwise by applicable codes or this Statement of Work

5-4.3 **Quad Building Superstructure:** No specific requirement for the type of structural system is imposed other than to meet the applicable regulations, to dimensionally fit within the space allocated for structure and to accommodate the exterior materials shown on the exterior elevations and building sections.

5-4.4 **Detached Building Structures.** Concept design is based on a load-bearing masonry exterior wall with a manufactured steel truss roof structure.

5-4.4.1 Alternative pre-cast concrete beams or trusses, pre-engineered steel structure, or conventional steel rafter / purlin systems.

5-4.5 **Exterior Closure:**

5-4.5.1 **Exterior Finishes**. Emphasis shall be placed on low maintenance and durability for exterior finish materials. Materials shall be residential in size, scale, and texture. Exterior wall materials shall be painted concrete or concrete masonry unit:

5-4.5.2 Termite decay and protection for exterior wood materials (siding, trims, etc.) shall be in accordance with National Wood Window and Door Association (NWWDA) Standards. Each piece of treated material shall bear identification of the testing agency to indicate performance in accordance with NWWDA.

5-4.5.3 Trim elements. Aluminum or vinyl clad wood trim is preferred over painted or stained wood trim. Painted exterior surfaces shall be minimized. When exterior exposed wood trim is used the following requirements apply:

5-4.5.4 Exposed wood, such as window trim, door sills, window sills, railings and balusters, trellis, wood fencing, arbors, solar shading devices including louvers, arbors, and trellis shall be treated for rot resistance in accordance with NWWDA Industry Standards I.S.4, Water Repellent Preservative Treatment for Millwork.

5-4.5.5 Exterior surfaces requiring painting shall receive a minimum of one prime coat and two finish coats of paint. Wood trim frames, etc., shall be back primed. Exterior semi-transparent low sheen stains, two coats, are acceptable, where appropriate for wood, plywood, etc.

5-4.5.6 Existing exterior stair treads and landings shall be provided with non-slip type treads. Existing exterior stairs shall be provided with metal railings.

5-4.6 **Roofs.** Roofing material and color shall comply with the attached architectural concept design drawings. Roofing system shall have Underwriters Laboratory (UL) Class A rating for fire resistance, UL 90 wind resistance rating, and Factory Mutual (FM) 1-90 fire and wind resistance rating.

5-4.6.1 **Quad Building, Chiller Plant Building and Pump House Building Roofs**. Built-up roofs shall have a minimum pitch of 1:24 (1/2-inch: 1 foot.).

5-4.6.1.1 **Built-Up Roofing**. Provide 4-ply, built-up roofing for use over rigid board insulation on metal decking for Quad Building Roofs. Provide 4-ply, built-up roofing for use over rigid board insulation on concrete slab of metal decking for Chiller Plant and Pump House Building. Provide manufacturers 20-year finish warranty.

5-4.6.2 **Gear Wash/Recreation Building Roofs**. Gear Wash/Recreation Building shall have sloped roof with a minimum pitch of 4:12. Refer to Attachment #25, Quad F Gear Wash/Recreational Building Sketches.

5-4.6.2.1 **Metal Roofing**. Standing seam steel or aluminum roof panels with integral or metal fascias. Provide manufacturers 20-year finish warranty.

5-4.6.3 **Roof water.** Conductor heads, scuppers and downspouts shall be provided for all roof areas. Provide calculation of gutter and downspout size if the existing conductor heads, scuppers and downspout dimensions cannot be determined. Calculations should be in accordance with SMACNA-03, Architectural Sheet Metal Manual. Provide 20-year manufacturers finish warranty. Downspouts draining onto a lower roof shall have metal or plastic splash deflectors. Downspouts shall be connected to the underground storm drainage system. Provide cast iron boot at the bottom of all downspouts.

5-4.6.4 **Rainfall Calculations**: Conductor heads, scuppers and downspouts shall be adequately sized to meet the following Design Rainfall Intensities:

Schofield Barracks: Design Rainfall Intensity (hourly in inches for a 5-minute period to be expected once in 10 years) = 188 mm (7.4 inches).

5-4.6.5 **Roof surface**. Roof surfaces shall be light colored to minimize heat gain. Roof water shall be diverted away from entrances and foundations.

5-4.6.6 **Roof Eave.** Existing Quad Building roof eave shall be removed and restored to its original Historic design and character. Use durable, low-maintenance materials. Refer to Architectural Concept Design Drawings for detail reference.

5-4.6.7 **Sheet Metal Work**. All Sheet metal material shall be copper.

Note: Flashing - Continuous stepped flashing to be installed at wall adjacent to roof slope. Design to facilitate easy maintenance and removal of roofing without removing or damaging the wall sidings. Provide metal drip edge of flashing at roof eaves.

5-4.7 **Trim and Flashing**. Materials shall comply with the RFP concept design drawings. Gutters, downspouts, and fascias shall be copper; comply with SMACNA Architectural Sheet Metal Manual; provide 20-year manufacturers finish warranty.

5-4.8 **Miscellaneous Exterior Elements**. Comply with the attached architectural concept design drawings. It is advisable to prohibit any use of exterior wood with painted finish; require pre-finished metal trim. Coordinate with user to include requirements for any building-mounted operational items such as communications antennae, special lighting, warning beacons, etc.

5-4.9 **Exterior Doors and Frames**.

5-4.9.1 **Doors**. Provide Historic doors as indicated on the concept design drawings. Refer to RFPconcept design drawings for door types and details. Fully glazed doors shall comply with wind load requirements of applicable codes. Telecomm Room doors shall be secured per AR 380-19 Information Systems Security.

5-4.9.4.1 **Hollow Metal Doors and Frames**. comply with ANSI A250.8/SDI 100. Doors shall be Level 3, physical performance Level A, Model 2; insulated; top edge closed flush. Frames shall be Level 3, 14 gauge, with continuously welded corners and seamless face joints. Doors and frames shall be constructed of hot dipped zinc coated steel sheet, complying with ASTM A653, Commercial Steel, Type B, minimum

A60 coating weight; factory primed. Anchors and accessories shall be zinc coated. Frames in masonry shall have bituminous back-coating, plaster guards, and shall be grouted solid. Provide concealed wall and head anchors in frame sufficient to support the weight of the grouted frame. Provide minimum four concealed wall anchors at masonry rough openings. Provide minimum one concealed head anchor for frame rough openings greater than three feet. Fire-rated openings shall comply with NFPA 80, and the requirements of the labeling authority.

5-4.9.5 **Exterior Door Finish Hardware**.

5-4.9.5.1 **Hinges**. ANSI/BHMA A156.1; template, full mortise, heavy duty, anti-friction ball bearing, minimum size 114 mm x 114 mm [4 ½" x 4 ½ "], stainless steel, non-removable pins.

5-4.9.5.2 **Locksets for Typical Exterior Door**. Provide stand-alone programmable electronic door locksets with audit capabilities. The lockset construction shall be all-metal, heavy-duty, and mortise. The lockset is equipped with hidden mechanical key override, an anti-pick latch and dead bolt, and a magnetic stripe reader. Each magnetic stripe card will be programmed to gain access into its respective module and sleeping/living rooms. Lockset shall be similar to Kaba Ilco, Solitaire 710-II Series or approved equal. The lockset shall include knob and lever torque test and "Ultra" finish with two-year warranty.

5-4.9.5.3 **Locksets for Typical Exterior Utility and Maintenance Doors**. spaces with doors covered by this paragraph include: Mechananical Rooms, Electrical Rooms, Telecommunication Rooms, Communication Rooms, Toilets, Janitor, and Stairwell. ANSI/BHMA A156.13; series 1000, grade 1, mortise lockset with removable core, non-ferrous base metal.

5-4.9.5.4 **Exit (Panic) Devices**. ANSI/BHMA 156.3; heavy-duty touch-pad type, through-bolted mounting. Listed and labeled for panic protection based on UL 305. Doors shall be provided with exit device if required by Building Code.

5-4.9.5.5 **Closers**. ANSI/BHMA A156.4; series C02000, Grade 1, hydraulic, factory-sized, adjustable to meet field conditions. Provide for all exterior doors, all doors to living units, and all doors opening to corridors and as required by codes. At exterior doors to lobbies, corridors, mechanical rooms, janitors closets, and COF supply areas provide overhead holders or closers with hold-open capability.

5-4.9.5.6 **Auxiliary Hardware**. ANSI/BHMA A156.16. Provide wall or floor stops for all exterior doors that do not have overhead holder/stops. Provide solid wood backing in the stud wall cavity for wall-mounted doorstops. Provide other hardware as necessary for a complete installation.

5-4.9.5.7 **Thresholds**. ANSI/BHMA A156.21; non-ferrous metal. Provide at all exterior doors. Provide inter-locking type threshold for UEPH Building 356 & 358 Living Unit only (threshold for Interior corridor door).

5-4.9.5.8 **Weatherstripping**. ANSI/BHMA A156.22. Provide at all exterior doors.

5-4.9.5.9 **Kick Plates**. ANSI/BHMA A156.6; stainless steel, 254 mm [10"]high x 51 mm [2"] less than door width. Provide at push side of all doors with closers.

5-4.9.5.10 **Locks and keys**. Lock cylinders shall have six pin tumblers and interchangeable cores, which are removable by a control key. Provide a master keying system. Locks for each organizational unit, including exterior storage shall be keyed alike. Contractor shall obtain the key bitting report from the hardware manufacturer and provide the report to DPW at the end of the project. Locks and keys shall conform to the standards and requirements of the Builders Hardware Manufacturers Association (BHMA) listed above.

5-4.10 **Exterior Windows**. Provide Historic windows as indicated on the concept design drawings. Refer to concept design drawings for window types and details. Fully glazed windows shall comply with

wind load requirements of applicable codes. All sleeping rooms shall have operable windows complying with egress requirements of applicable codes. Windows shall be operable and shall have locks.

5-4.10.1 **Screens.** Fiberglass screens shall be provided at all operable windows and be of window manufacturer's standard design. Fiberglass insect screens, 18 x 16 mesh size, shall be provided for all windows and sliding glass doors and should be the window or door manufacturers standard design for use with the windows and doors being provided. Insect screen frames shall be removable type for easy cleaning.

5-4.10.2 **Exterior Glass and Glazing**. To comply with force protection minimum standards: Single glazing and the inner pane of insulated glass assemblies in exterior windows and doors shall be minimum 6 mm (1/4-inch) annealed laminated glass.

5-4.11 **Insulation**. Insulation shall be provided to meet the following requirements:

5-4.11.1 Thermal and sound insulation shall have a flame spread rating of 25 or less and a smoke development rating of 50 or less exclusive of the vapor barrier when tested in accordance with ASTM E 84. A vapor barrier shall be provided on the warm side of exterior and ceiling insulation for thermal insulation.

5-4.11.2 Urethane is not allowed as an insulation material.

5-4.11.3 Polyicyene expanding foam insulation will be permitted as a material to insulate ceilings and walls.

5-4.11.3 **Thermal Insulation**. Provide exterior wall, floor, and roof/ceiling assemblies with thermal transmittance (U-values) required to comply with the proposed energy calculations for the facilities. Insulation shall not be installed directly on top of suspended acoustical panel ceilings.

5-4.12 **Louvers:** Aluminum-framed louvered panels. Louver finish shall be Kynar 500 or approved equal. Kynar 500 properties: a fluoroploymer-polyvinylidene fluoride (PVDF). Finish shall be factory applied and oven baked. Total overall dry film thickness shall be 0.025mm (1mil) thick.

5-4.13 **Exterior Railings**. All exterior handrails and guardrails shall be replaced. Existing railing design does not conform to original historic design for Quad C. Design of exterior handrails and guardrails shall conform to historic character of Quad C. The design shall be coordinated with the State Historical Preservation Office. Exterior railing materials, including bolts and fasteners shall be painted hot-dipped galvanized steel. Design shall comply with all applicable codes. Final handrail design shall be approved by DPW.

## 5-5 INTERIOR DESIGN.

### 5-5.1 Floors and Flooring Material

5-5.1.1 **Floors**. Comply with requirements of applicable codes. Non-combustible construction is preferable, even where combustible materials are allowed by code. Floor finish materials shall be as specified in functional and area requirements listed in Chapter 2 of the Statement of Work.

5-5.1.2 **Quarry Tile.** will be the abrasive surface type as stated in the Tile Council of American Standard 137.1 (Ceramic Tile). Epoxy coatings, linoleum, vinyl and VCT are not acceptable substitutes for quarry tile. Grouting material for quarry tile shall be a grout system employing epoxy resin and hardener portions especially formulated for commercial installations where chemical resistance is important. All grout joints shall be sealed.

5-5.1.3 **Ceramic Tile**. Comply with ANSI A 137.1 and the recommendations of Tile Council of America (TCA) Handbook For Ceramic Tile Installation. Provide marble threshold under doors where a ceramic tile

floor meets a different floor finish. All grout joints shall be sealed.

5-5.1.4 **Vinyl Composition Tile.** Vinyl composition tile shall conform to ASTM F 1066, Class 2, through pattern tile, Composition 1, asbestos-free, and shall be 12 inches square and 1/8 inch thick. The tile shall have the color and pattern uniformly distributed throughout the thickness of the tile. Flooring in any one continuous area shall be from the same lot and shall have the same shade and pattern.

5-5.1.5 **Resilient Base.** Base shall be manufacturers standard rubber, coved style (installed with resilient flooring). Base shall be 4 inches high and a minimum 1/8-inch thick. Job formed corners shall be provided.

5-5.1.6 **Carpet.** Carpet construction shall be woven; Type: Broadloom 3.6m minimum usable carpet width; Pile Type: Level Loop; Pile Fiber: Commercial 100% branded federally registered trademark nylon continuous filament; Pile Height: minimum 3.4mm in accordance with ASTM D418; Yarn Pile: minimum 2; Pile density: minimum 4696; Dye method: solution dyed; backing material: backing material shall be 100% synthetic material. Static control shall be provided to control static buildup to less than 3.5 kV when tested at 20% RH and 21 degrees C in accordance with AATCC TM 134.

5-5.1.7 **Concrete Floors**: All concrete floors on the first floor of all Quad C Buildings that will receive vinyl composition tile or carpet shall be provided with hardener/sealer that conforms to the following requirements:

5-5.1.7.1 Qualifications: the installer of hardener/sealer shall be certified and shall be on a list of preapproved applicators of the product.

5-5.1.7.2 Technical Representative: Hardener/sealer manufacturer's Technical Representative shall be made available for initial training of applicators and field observation during installation of the hardener/sealer. Technical Representative shall certify installations for warranty.

5-5.1.7.3 Warranty: Hardener/sealer manufacturer's "Full System 10 year warranty" on the replacement of all flooring material and labor that delaminates due to moisture migration, excessive vapor emissions or contaminates, shall be provided on all concrete floors to receive carpet and resilient flooring.

5-5.2 **Interior Walls and Partitions**. Comply with requirements of applicable codes. Non-combustible construction is preferable, even where combustible materials are allowed by code. The use of 16 mm [5/8"] Type X gypsum board shall be utilized where drywall partition is required.

5-5.2.1 Offices and Administration areas are to have full height drywall on metal stud partitions with sound insulation. The use of 16 mm [5/8"] Type X gypsum board shall be utilized where drywall partition is required.

5-5.2.2 Interior walls: Masonry or concrete walls at Arms Room, Heavy storage areas for the Company Operation Facilities (COF) shall have full height masonry or concrete walls.

5-5.2.3 Arms Vault needs to meet requirements at AR 190-11, Physical Security of Arms, Ammunition, and Explosives. Additional Arms Vault requirements are explained in SOW Ch 5, paragraph 5-7.2 and SOW Ch 6, paragraph 6.5-4

5-5.2.4 Interior seismic walls: these walls will be made of concrete. The wall finish shall be smooth; no visible snap-ties or formwork is permitted. These walls will be furred with 64 mm [2-1/2"] metal studs and gypsum board.

5-5.2.5 **Metal Support Systems**. Non-load bearing metal studs and furring shall comply with ASTM C 645; stud gauge shall be as required by height and loading, but shall not be less than 25 gauge. Maximum

stud spacing: 406 mm [16”] on center. Provide galvanized finish.

5-5.2.6 **Gypsum Board**. Comply with ASTM C 36. Minimum panel thickness: 16 mm [5/8”]. Provide Type X panels in fire-rated assemblies. Provide moisture resistant panels at locations subject to moisture. Provide abuse-resistant panels where indicated in functional and area requirements. Joint treatment: ASTM C 475. Screws ASTM C 646. Drywall installation: ASTM C 840.

5-5.2.7 **Ceramic Tile**: Comply with ANSI A 137.1 and the recommendations of Tile Council of America (TCA) Handbook For Ceramic Tile Installation. Substrate for wall tile shall be cement backer board (gypsum board is not acceptable).

5-5.2.8 **Concrete seismic wall on existing concrete wall:** these conditions occur at the exterior facing concrete walls. The finish surface shall be smooth for paint application.

5-5.3 **Telecommunication Room (Tele)**

5-5.3.1 Require coordination with Schofield Barracks Physical Security Office, Harold Evans, and the Directorate of Information Management, Marion Robinson.

5-5.3.2 Telecomm. rooms which may house SIPR servers shall be treated as classified open storage areas.

5-5.3.3 Security for Telecomm rooms shall be per AR 380-19 information systems security.

5-5.4 **Ceilings**. Non-combustible construction is preferable, even where combustible materials are allowed by code. Ceiling finish materials shall be as specified in functional and area requirements listed in Chapter 2 of the Statement of Work, as indicated on the Concept Design Drawings, and comply with requirements of applicable codes. Textured ceiling finish may be provided in areas other than laundry or bathrooms. Interior finish on walls and ceilings shall be in accordance with NFPA 101. Provide access doors to maintain and service equipment above the ceiling.

5-5.4.1 **Acoustic Ceiling Tile**. Acoustic tile shall be smooth, nondirectional finish on scratch-resistance surface. Acoustic tile shall be washable, humidity resistant, and soil resistant. Provide acoustic tile complying with Class A: Flame Spread 25 or under (UL Labeled) per ASTM E 1264; NRC: 0.70 minimum; CAC: 35 minimum; Light Reflect Coefficient: 0.89 minimum.

5-5.4.2 **Fiberglass Ceiling Tile.** Fiberglass ceiling tile (frp) shall beis easy-to-clean panel and made of fiberglass reinforced plastic. Panel surface allows dirt and grease to be cleaned off quickly and easily. As a frp panel it is extremely resistant to most stains and chemicals. The entire panel is moisture resistant and does not support mold or mildew, and it will not rust or corrode. Provided fiberglass tile complying with Class A: Flame Spread 25 or under (UL Labeled) per ASTM E 1264. Light Reflect Coefficient: 0.89 minimum.

5-5.5 **Interior Doors and Frames**. Provide hollow metal doors, or flush wood solid core doors at UEPH and administration spaces. Provide hollow metal doors at COF supply spaces. All frames shall be hollow metal. Hollow metal doors and frames shall have a minimum A60 galvanizing. Hollow metal frames shall have a minimum of 3 wall anchors and one floor anchor per jamb.

5-5.5.1 **Wood Doors**. Provide flush wood solid core doors complying with National Wood Window and Door Association (NWWDA) I.S.-1A. Stile edges shall be non-finger jointed hardwood compatible with face veneer. Provide American Woodwork Institute (AWI) Grade A hardwood face veneer for transparent finished doors; provide AWI Sound Grade hardwood face veneer for painted doors. Transparent finished doors are preferred.

5-5.5.2 **Hollow Metal Doors**. Comply with ANSI A250.8/SDI 100. Doors shall be Level 2, physical performance Level B, Model 2; top edge closed flush, factory primed. Anchors and accessories shall be zinc coated.

5-5.5.3 **Hollow Metal Frames**. Comply with ANSI A250.8/SDI 100. Frames shall be Level 2, 16 gauge, with continuously welded corners and seamless face joints; factory primed. Anchors and accessories shall be zinc coated. Frames in masonry shall have bituminous back-coating, plaster guards, and shall be grouted solid. All hollow metal doors frames shall be painted (typical).

5-5.5.4 Arms Vault doors and frames needs to meet opening requirements at AR 190-11, Physical Security of Arms, Ammunition, and Explosives. Additional Arms Vault Door and Frame requirements are explained in SOW Ch 5, paragraph 5-7.2 .

5-5.5.5 Telecom Room doors and frames to meet opening requirements for Secret-rated work.

5-5.5.6 **Fire-rated and Smoke Control Doors and Frames**. Comply with International Building Code (IBC), NFPA 80, and requirements of labeling authority. Doors and frames shall bear labels from Underwriters Laboratories (UL), Factory Mutual Engineering and Research (FM) or War. Comply with positive pressure testing requirements of IBC.

5-5.6 **Interior Door Finish Hardware**.

5-5.6.1 **Hinges**. ANSI/BHMA A156.1; template, full mortise; Grade 1, ball bearing on doors with closers; Gade 2, bearing on doors without closers. Minimum 114 mm x 114 mm [4 ½" x 4 ½ "], stainless steel metal.

5-5.6.2 **Locksets for Typical Interior Door**. Provide stand-alone programmable electronic door locksets with audit capabilities. The lockset construction shall be all-metal, heavy-duty, and mortise. The lockset is equipped with hidden mechanical key override, an anti-pick latch and dead bolt, and a magnetic stripe reader complying with ISO standards and ABA dimensional specifications. Each magnetic stripe card will be programmed to gain access into its respective module and sleeping/living rooms. Lockset shall be similar to Kaba Ilco, Solitaire 710-II Series or approved equal. The lockset shall include knob and lever torque test and "Ultra" finish with two-year warranty ANSI/BHMA A156.13; mortise lockset with removable core; non-ferrous base metal.

5-5.6.3 **Locksets for Typical Interior Utility and Maintenance Doors**. spaces with doors covered by this paragraph include: Mechananical Rooms, Electrical Rooms, Telecommunication Rooms, Communication Rooms, Toilets, Janitor and Stairwell. ANSI/BHMA A156.2; series 4000, Grade 1, non-ferrous base metal, removable core.

5-5.6.4 **Exit (Panic) Devices**. ANSI/BHMA 156.3; heavy-duty touch-pad type, through-bolted mounting. Listed and labeled for panic protection based on UL 305. Doors shall be provided with exit device if required by code.

5-5.6.5 **Closers**. ANSI/BHMA A156.4; series C02000, Grade 1, hydraulic, factory-sized, adjustable to meet field conditions. Provide for all entry doors to living units, all doors opening to corridors and as required by codes.

5-5.6.6 **Auxiliary Hardware**. ANSI/BHMA A156.16. Provide wall or floor stops for all doors that do not have overhead holder/stops. Provide other hardware as necessary for a complete installation.

5-5.6.7 **Kick Plates**. ANSI/BHMA A156.6; stainless steel, 254 mm [10"]high x 51 mm [2"] less than door width. Provide at push side of all doors with closers.

5-5.8 **Casework**.

5-5.8.1 **Service Areas in Living Units and Coffee Areas in Admin Areas**.
**Bathroom Vanity in Living Units**
**UEPH Building CQ Station Reception Desk**
**Vanity at Public Toilets**

**The following typical casework description shall apply to the spaces described above:**
Provide architectural cabinetwork complying with AWI Quality Standards, Section 400, Custom Grade cabinets with high-pressure decorative laminate finish, meeting NEMA LD3 standards. Horizontal laminate: nominal .050" thick; vertical laminate: nominal .028" thick. Door and drawer edges shall be plastic laminate: nominal .028" thick. Countertop shall be post-formed high-pressure decorative laminate with waterfall front edge and integral coved backsplash, or solid surfacing material. Cabinets shall be constructed as specified and shall meet requirements of KCMA A161.1. The use of any particle board material for cabinet construction is not permitted.

5-5.8.2 **Other casework**. Provide architectural casework complying with AWI Section 400, Custom Grade cabinets with high-pressure decorative laminate finish meeting NEMA LD3 standards. Horizontal laminate: nominal 1.27mm [.050"] thick; vertical laminate: nominal 0.71mm [.028"] thick. Door and drawer edges shall be plastic laminate: nominal 0.71mm [.028"] thick. Work surfaces and counter shall be high-pressure decorative laminate, or solid surfacing material.

5-5.9 **Window Treatments**. Provide horizontal aluminum mini-blinds at all exterior windows. Blinds shall have one-inch wide by .008-inch thick slats with anti-static, anti-microbial polyester baked enamel finish. Provide heavy duty 25mm x 38mm [1" x 1-1/2"] steel headrail, and tubular steel bottom rail finished to match slats.

5-5.10 **Toilet Partitions**. Toilet partition panels shall be floor supported and reinforced to receive partition-mounted accessories. Finish shall be laminated plastic on solid phenolic core. Toilet partition hardware shall be stainless steel. Latching devices, pulls, and hinges for handicap compartments shall comply with Title III of the American Disability Act and Accessibility Guidelines.

5-5.11 **Elevators**. The offeror shall provide the services of an elevator inspector employed by an independent testing company to inspect the elevator, witness the final testing, and certify elevator. The inspector shall meet all qualification requirements of ASME QEI-1 and shall be certified in accordance with ASME QEI-1. The offeror shall provide an elevator certificate signed by the inspector for each elevator. The certificate shall be provided to the Contracting Officer within 30 days of the completion of testing.

5-5.12 **Sound Attenuation**.

5-5.12.1 **Testing**. Certified proof-of-performance field tests will be conducted to demonstrate that the floor and wall systems as constructed provide the required sound isolation. Tests for air-borne sound shall be made in compliance with ASTM E336. Tests for impact sound shall be made in compliance with ASTM E1007. Testing of 10 percent (minimum) of each type of floor and wall system is required. Location of test sites will be chosen at random by the Contracting Officer.

5-5.12.2 Any wall or floor system found to be inadequate shall have the deficiencies corrected and the additional qualifying tests conducted at the contractor's expense. Testing at the contractor's expense of greater than 10 percent of each system may be required if the Contracting Officer determines that the quality of construction requires this additional testing.

5-5.12.3 Party walls (floor/ceiling construction between different organizational units) shall be designed to provide the minimum airborne sound transmission ratings and impact isolation ratings stated in Table 5-5.12

**TABLE 5-5.12 - SOUND TRANSMISSION STANDARDS FOR PARTY WALL CONSTRUCTION**

| Area | FSTC[1] | FIIC[2] |
|---|---|---|
| Party Walls at UEPH Bldgs. 356 and 358 at all Other Locations | 52 | N/A |
| Party Walls at UEPH Bldgs. 356 and 358 Sleeping/Living Rooms. | 52 | 65 |
| Party Walls at Bldg. 355 and 357 | 52 | 57 |
| Operable partition at Bldg. 357 Classroom/Classroom | 47 | N/A |

Note[1]: Field Sound Transmission Class. See ASTM E336.

Note[2]: Field Impact Isolation Class. See ASTM E1007.

## 5-6 PAINT FINISHES AND COATING

5-6.1 Interior surfaces, except factory pre-finished material, shall be painted a minimum of one prime coat and two finish coat. Baths and laundry rooms, and all their painted trim shall be finish painted with semi-gloss latex. Natural finished interior doors are acceptable. All other areas shall be water-based latex low sheen washable eggshell finish for walls/trims and water-based latex low sheen washable eggshell finish for ceilings. Oil-based paint is not allowed except for surfaces that require special coating. Interior paint finish may be textured. When semi-gloss and low sheen painted surfaces are adjacent to each other, the wall surfaces in the room shall be finished with semi-gloss paint to avoid having two different finishes adjacent to each other.

5-6.2 All exterior surfaces including all utility appendages, shall receive a minimum of one prime coat and two finish coats of paint. Exterior paint shall be water-based latex. Exterior low sheen stains (two coats) will be acceptable, where appropriate for wood. Oil-based paint is not allowed except for surfaces that require special coating.

5-6.3 All painting work conform to and be in compliance with Unified Facilities Guide Specifications, Division 09-FINISHES, Section 09900, Paintings and Coatings.

5-6.4 Paints used on surfaces in areas of high humidity where mildew is possible and on fabric or vapor barrier over insulation shall contain a mildewcide. The mildewcide will not adversely affect the color, texture, or durability of the coating. The mildewcide shall be incorporated into the paint by the manufacturer and shall attain a surface disfigurement rating of 8 or greater when tested in accordance with ASTM D 3273 and evaluated in accordance with ASTM D 3274. Mercurial mildewcide and insecticides shall not be used in paints.

5-6.5 Colors shall be as approved from schemes submitted with proposal. All interior paint surfaces shall be painted off-white. Each proposal shall include three basic exterior and interior color coordinated schemes and color samples. Final selection of exterior colors will be made by the Installation Commander (USAGE-HI). Exterior color selections shall conform to the Installation Exterior Architectural Plan (IEAP).

All exterior wood trim to include framing members around garage door openings shall be “back-primed” (surfaces that will be inaccessible to field painting after installation of the wood trim shall be primed with one coat of primer before installation).

## 5-7 PHYSICAL SECURITY REQUIREMENTS.

5-7.1 **Anti Terrorism / Force Protection**. Designs shall conform to the Department of Defense Minimum Antiterrorism Standards for Buildings, July 31, 2002 listed as Reference 5-2.4. Offerors' proposals will be deemed acceptable provided they comply with the Physical Security Requirements described in paragraphs described below. UEPH buildings are classified as troop billeting structures; COFs, Locker Room Facilities, and Battalion HQs are classified as primary gathering structures

5-7.1.1 The AT/FP standard used to develop the proposed design is the Department of Defense Minimum Antiterrorism Standards for Buildings, July 31, 2002. Agreements regarding definitions include:

5-7.1.2 A perimeter barrier (controlled perimeter) is provided for this project.

5-7.1.3 Minimum Construction Standards based on conventional construction without analysis shall be provided. All minimum standoffs shall be provided according to the Standard.

5-7.1.4 The structure shall have a 33-foot exclusive clear zone.

5-7.1.5 Access to parking within 82 feet of Quad C Buildings will be controlled; defined in UFC 4-010-01, para. B-1.1.2.2.1. Parking along roadways within 82 feet of the buildings will not be allowed, defined in UFC 4-010-01, para. B-1.1.2.2.2.

5-7.1.6 UFC 4-010-01 The preferred location of electrical and mechanical equipment such as transformers, air-cooled condensers, and packaged chillers is outside the unobstructed space or on the roof. However, electrical and mechanical equipment is allowed within the unobstructed space as long as the equipment provides no opportunity for concealment of explosive devices, defined in para. B-1.3.1.

5-7.1.7 The Quad C structures shall be designed to resist progressive collapse since it is 3 stories in height. Progressive Collapse Vulnerability Assessment is attached to this RFP document for offerers' use.

5-7.1.8 Laminated 1/4 inch thick annealed glass is required for all exterior windows and doors, defined in para. B-3.1.1. Window frames shall be provided as defined in para. B-3.1.2.

5-7.1.9 Exterior doors that are not designated as Historic Type (See concept design drawings) are required to be hollow metal door type.

5-7.1.10 A Mass Notification Alert System is required for this project, defined in para. B-4.7

5-7.2 **Arms Vault at Company Operations Facilities**. Physical Security of Arms shall be in compliance with AR 190-11. Refer to SOW Ch 6, para. 6.5.4 for structural Arms Vault requirements. Refer to SOW Ch 2, para. 2-2.2.2 for Arms Vault in Building 355. New floors, walls, and ceilings shall be provided for each Arms Vault. Unless more stringent construction features are required by life safety or building codes, minimum construction requirements shall be as follows:

5-7.2.1 **Floor**. 152 mm [6"] slab on grade; reinforced with minimum 152 mm x 152 mm MW 25.8 x MW 25.8 [6 x 6, W2.4 x W2.4] welded wire fabric, on vapor barrier, on 152 mm [6"] deep porous fill.

5-7.2.2 **Walls**. 206 mm [8"] thick cast-in-place concrete reinforced with 15M [#5] bars at 152 mm [6"] on center, each way, each face. Concrete masonry units reinforced in a similar manner, as described, will be permitted.

5-7.2.3 **Ceiling**. 206 mm [8"] thick cast-in-place concrete reinforced with 15M [#5] bars at 152 mm [6"] on center, each way, each face.

5-7.2.4 **Door and Frame**. Provide 44mm [1-3/4"] thick hollow metal door, industrial type construction,

minimum14 ga. skin plate thickness, and internally reinforced vertically with continuous steel stiffeners spaced 152mm [6”] max. on center. Provide steel bar type, Dutch door style daygate with metal shelf for issuing arms and ammo. Daygate shall have lock operated from outside by key, and from inside by handle. Comply with egress requirements of applicable codes.

Class 5-vault door and frame complying with Federal Specification AA-D-00600C. National Stock Number is 7110009351886; provide pass-thru window in daygate. Locks shall be Underwriters Laboratory listed Group 1 or 1R combination lock.

5-7.2.5 **Penetrations**. Penetrations shall be minimized. All openings or penetrations in Vault floor, walls or ceiling greater than .062 $m^2$ [96 square inches] shall be protected with welded steel rod-and-bar grid weighing 39.6 kg/m2 [8.1 lb./sf], consisting of 25.4 mm x 4.8 mm [1” x 3/16”] vertical bearing bars at 25 mm [1”] on center, and 8 mm [5/16”] diameter horizontal rods at 50 mm [2”] on center; or equivalent protection.

5-7.2.6 **Arms Rack Anchor Rings**. Provide 10 mm [3/8”] diameter stainless steel bar bent into U-shape (25 mm inside radius). Overall length shall be 127 mm [5”]; embed 76 mm [3”] of horizontal legs (open end) in pre-drilled epoxy filled holes. U-shaped end will protrude from floor to provide anchorage for GFGI arms racks. Orient the projecting U-shape vertically. Provide anchor rings at 3’-0” on center along the floor inside the Arms Vault -Verify with DPW for exact installation and mounting location.

5-7.2.7 **Floor Anchors for GFGI Security Safes**. Provide 10 mm [3/8”] diameter stainless steel bar bent into U-shape (25 mm inside radius) with 2” long 90 degree returns at ends of vertical legs. Overall height shall be 127 mm [5”]; embed 76 mm [3”] of vertical legs (open end) in concrete floor slab; 51 mm [2”] of U-shaped end will protrude above slab to provide anchorage for GFGI security safe.

**5-8 SIGNAGE**

5-8.1 **Directional, Informational, and Motivational Signage**. Signs consist of exterior building signage, interior signage, Interior building directories, directional signs, and identification signs. All Exterior and Interior Signage shall comply with TM 5-807-10. Coordinate with installation facilities engineer (DPW) for location of all signs, color of sign, and verbiage to be included on all signs. All exterior signs and interior Building Directory Signs shall be constructed of minimum 0.090-inch think aluminum sheets. All other signs shall be constructed of minimum 4.76 mm [3/16-inch] thick plastic acrylic sheets. All signage shall comply with requirements of ADAAG and UFAS. Refer to Attachment No. 1 for Sign Types described below.

5-8.2 **Exterior Signs:** provide the following Exterior Building Sign Types:

5-8.2.1 Provide a total of four Exterior Building Identification Signs, one per building, Type D4, Sign grid 1, size: 762 mm H x 1067 mm W [30”H x 42”W].

5-8.2.2 Provide a total of eight Exterior Building Number Signs, two per building, Type C8, wall mounted, Sign grid 1, size: 457 mm H x 1372 mm W [18”H x 54”W].

5-8.2.3 Provide all exterior doors with Room Identification Sign, Type BB2, wall mounted, size: 229 mm H x 229 mm W [9”H x 9”W].

5-8.2.4 Provide a total of 12 Exterior Guide Signs, Type AA5, wall mounted, size: 3 modules of 70 mm H x 457 mm [W 2-3/4”H x 18”W].

5-8.2.5 Provide a total of 12 Exterior Guide Signs, Type AA6, ceiling mounted, size: 3 modules of 102 mm H x 610 mm W [4”H x 24”W].

5-8.2.6 Provide a total of 15 Company Identification Sign, Type BB2 (similar), wall mounted, size: 305 mm H x 610 mm W [12”H x 24”W]. Text Size=1” Cap with ½” line spacing vertically in lieu of 3/8”.

5-8.3 **Interior Signs**: provide the following Interior Building Sign Types:

5-8.3.1 Provide eight Building Directory Signs, two per building, Type AA1, wall mounted, Sign grid 2, size: 1067 mm H x 1219 mm [42”H x 48”W].
5-8.3.2 Provide all interior doors with Room Identification Sign, Type BB2, wall mounted, size: 229 mm H x 229 mm] 9”H x 9”W].

5-8.4 See accessibility section for accessible signage requirements.

## 5-9 ACCESSIBILITY FOR HANDICAPPED (PHYSICALLY IMPAIRED) PERSONS, BARRIER FREE DESIGN.

5-9.1 Accessibility will be based on requirements of the Americans with Disabilities Act (ADA.) Public accommodation will be provided as described in the ADA Architectural Guidelines (ADAAG.). Refer to SOW Chapter 2 for ADA requirements for individual spaces.

5-9.2 Proposed accommodations generally consist of the following:

5-9.2.1 Public areas will be ADA-compliant.
5-9.2.2 Entries and exits accessible as required by ADA.
5-9.2.3 An accessible path to all offices will be provided.
5-9.2.4 Toilets Rooms to be ADA-compliant.
5-9.2.5 All common use areas will be ADA-compliant.
5-9.2.6 ADA-compliant directional and identification signage will be provided.
5-9.2.7 All employee-only spaces will be provided with ADA-compliant approach, entry, turn-around and exit.
5-9.2.8 Where disabled employees presently exist, provide path and floor area space suitable for accommodation should be provided. No disabled employees have been identified.
5-9.2.9 ADA-compliant fire alarm systems are described in the Fire Protection Design Analysis.
5-9.2.10 ADA-compliant communication systems are described in the Electrical Design Analysis.

# CHAPTER 6

## STRUCTURAL DESIGN

6-1 **GENERAL**. The structural criteria established herein shall be used for structural loading, design and installation of all structural systems and foundations, including manufacturing, erection, supervision, testing, and quality assurance of the completed installation of the buildings. A concept structural design which includes seismic and antiterrorism/force protection design has been prepared by the Government and is an attachment to this RPF. The offerors shall incorporate the concept structural design into their design proposal, however the concept design may be changed due to innovation or economic efficiency, not withstanding requirements of all other sections of this rfp and provided all structural criteria herein are met and accounted for in a rational analysis and stamped by a structural engineer licensed in the U.S. The winning offeror shall provide final structural design in compliance with the structural design criteria listed below.

6-2 **DESIGN CRITERIA**. Structural design criteria and guidance are contained in the following documents. Editions that are current at the date of issue of the RFP shall apply.

6-2.1. TI 800-01, Design Criteria
6-2.2. TI 809-04, Seismic Design for Buildings
6-2.3. TI 809-05, Seismic Evaluation and Rehabilitation for Buildings
6-2.4. TM 5-853-1, Security Engineering, Vols 1-3 (For Official Use Only)
6-2.5. MIL HNDBK 1013/1A, Design Guidelines for Physical Security of Facilities
6-2.6. AR 190-11, Physical Security of Arms, Ammunition, and Explosives, with Change 1
6-2.7. ASCE 7, Minimum Design Loads for Buildings and Other Structures
6-2.8. Unified Facilities Guide Specifications (UFGS)
6-2.9. EM 1110-2-2002, Evaluation and Repair of Concrete Structures
6-2.10. UFC 4-010-01, DOD Minimum Antiterrorism Standards for Buildings, 31 Jul, 2002
6-2.11. UFC 1-200-01, Design: General Building Requirements, dated 31 July 2003
6-2.12. 2000 International Building Code (IBC 2000)

6-3 **MINIMUM LOAD STANDARDS.** Design loads and load combinations shall be in accordance with 2000 IBC, except as otherwise indicated by this chapter. Additional seismic and anti-terrorism requirements are covered under criteria listed in paragraphs that follow. Design loads shall meet the minimum load standards shown in Table 6-1.

TABLE 6-1 - MINIMUM LOAD STANDARDS

| LOAD TYPE | REQUIREMENT |
|---|---|
| Dead Load | Actual |
| Roof Live Load | 1 kPA (20 psf) |
| Balconies, First Floor Corridor, Stair, Dining & Serving Room | 4.8 kPa (100 psf) |
| Corridor above first floor | 3.8 kPa (80 psf) |
| Dining and Serving Room | 4.8 kPa (100 psf) |
| Kitchen and Dishwashing Room | 12 kPa (150 psf) |
| Residential Live Load | 1.9 kPa (40 psf) |
| Classroom Live Load | 1.9 kPa (40 psf) |

| | |
|---|---|
| Office and Restroom Live Load | 2.4 kPa (50 psf) |
| Light Storage Live Load | 3.5 kPa (70 psf) |
| Stair and Exitways | 4.8 kPa (100 psf) |
| Mechanical and Electrical Room Live Load | 7.2 kPa (150 psf) |
| Wind Load Criteria | 105 MPH Basic Wind Speed Exposure "C" in accordance with ASCE 7 |
| Seismic Load Criteria | Refer to Seismic Evaluation and Rehabilitation Report |

6-4 **MINIMUM MATERIAL STRENGTHS AND PROPERTIES.**

6-4.1 **Foundation**. Foundation shall be concrete footings and/or thickened slab edges compatible with the soil and climatic conditions of the site. Allowable soil bearing pressure shall be 3000 psf for footings bearing on undisturbed residual soil.

6-4.2 **Reinforced Concrete**. Concrete Requirements. All concrete shall conform to IBC 2000.

6-4.2.1 Minimum concrete strength at 28 days: 21 Mpa (3000 psi) with water-cement ratio not more than 0.45.

6-4.2.2 Minimum concrete thickness:

Slab-on-grade: Non-structural interior slab-on-grade design shall be in accordance with TI 809-02. Non-structural interior slab-on-grade system shall consist of minimum 102 mm (4") concrete slab over vapor barrier over granular termite barrier over separation geotextile over capillary water barrier. Welded wire reinforcement shall be secured at mid-depth of slab by mechanical means such as precast concrete spacers or reinforcing chairs. All slabs-on-grade shall be moist cured for a minimum of 7 days followed by curing by curing compound for another 3 weeks. Curing compound shall be dissipating type compatible with any floor seal or floor covering adhesive.

Structural members. The thickness of all structural members shall conform to ACI 318, Building Code Requirements for Reinforced Concrete.

6-4.2.3 The minimum yield strength Fy of reinforcing steel shall be 275 Mpa (40,000 psi).

6-4.3 **Concrete Masonry Units (CMU).**

6-4.3.1 Reinforced masonry assemblies shall have a minimum compressive strength of 10.34 Mpa (1500 psi).

6-4.3.2 Cmu shall conform to ASTM C 90, Type II, except oven-dry weight shall be no less than 581 kg per cubic meter (119 pcf) for hollow load bearing units.

6-4.3.3 Mortar shall be Type "S" conforming to ASTM C 270.

6-4.3.4 Grout shall conform to ASTM C 476 with a minimum compressive strength of 15 Mpa (2000 psi).

6-4.4 **Structural Steel.**

6-4.4.1 Structural steel shall conform to ASTM A 36 or better.

6-4.4.2 Anchor bolts shall conform to ASTM A 307. Machine bolts shall conform to ASTM A 325.

6-4.4.3 All welds shall be accomplished by certified welders in conformance with AWS D1.1, Structural Welding Code.

6-4.4.4 All steel shall be primed in the shop. Exposed steel shall be hot-dip galvanized.

6-4.5 **Light Gage (Cold-Formed) Steel Construction.** Design and construction shall be in accordance with IBC 2000.

6-4.5.1 Fasteners. All screws, bolts, anchor bolts and expansion shields shall be stainless steel or finished with zinc, cadmium or co-polymer coatings. Pneumatically driven pins or nails will not be permitted. All welded connections shall be designed in accordance with Section E of the AISI Specification. All welding shall be accomplished in accordance with AWS D1.3 standards. All weld areas shall be re-touched with the appropriate paint or cold galvanized to retain corrosion resistance.

6-4.5.2 Protective Coating. Exposed light gage steel members will not be allowed. All light gage steel used for exterior applications shall have minimum G-90 hot dip zinc coating in accordance with ASTM A 525. Exterior applications include all steel members directly supporting exterior siding or roof sheathing. Interior applications shall have a minimum G-60 hot dip zinc coating in accordance with ASTM A 525.

6-4.6 **Miscellaneous Metal Items.** All railings, handrails, anchor bolts, plates, and steel embedded in concrete, metal studs and runners, and other miscellaneous metal items shall be galvanized. All damaged galvanized areas not embedded shall be repaired with galvanizing repair compound. All metal items listed above that are exposed to the weather or exterior shall be hot-dip galvanized or coated with inorganic zinc primer.

6-4.7 **Structural Wood.**

6-4.7.1 Wood structural members are not allowed.

6-5 **SPECIAL REQUIREMENTS**.

6-5.1 **AISC Certification requirements**: All fabrication of structural steel shall be accomplished by an AISC certified Category Sbd fabricating plant.

6-5.2 **Materials Testing.** As a minimum, the following concrete tests shall be performed: air content, slump, unit weight, temperature, and strength. Refer to United Facilities Guide Specification Section 03300, Cast-in-Place Structural Concrete, for sampling and testing standards. All costs for testing shall be borne by the Contractor.

6-5.3 **Special Inspection.** Continuous or periodic special inspection by a certified inspector shall be performed on seismic-resisting systems in accordance with IBC 2000, Section 1704. See also Unified Facilities Guide Specification Section 01452, Special Inspection for Seismic-Resisting Systems, for inspection requirements and other details.

6-5.4 **Arms Vaults.** The arms vault in each Company Operations Facility shall meet the requirements

of AR 190-11. Refer also to paragraph 5-7.2.6, “Arms Rack Anchor Rings”.

6-5.5 **Antiterrorism/Force Protection (AT/FP).** This project is classified as a major renovation for inhabited structures of troop billeting and primary gathering structures which shall be designed and constructed to meet DOD AT/FP design criteria, UFC 4-010-01, DOD Minimum Antiterrorism Standards for Buildings, 31 Jul, 2002.

The Government has prepared a concept site plan which employs operational options for parking areas and roadways to meet all AT/FP standoff distance requirements of UFC 4-010-01 and to obviate the need to harden the existing Quad C buildings for anti-terrorism blast loads. Refer to Statement of Work, Chapter 3, Paragraph 3-5, Site Development Plan, for AT/FP operational options in the site concept design.

The Government has also prepared an independent anti-terrorism/force protection assessment and retrofit (AT/FP concept design) report, entitled “Progressive Collapse Vulnerability Assessment”, by Mitsunaga and Associates, dated May 2003 (attached) to provide compliance to other AT/FP requirements of UFC 4-010-01.

New windows shall meet requirements of UFC 4-010-01, paragraph B-3.1 as indicated by the AT/FP concept design. Window criteria include minimum ¼” nominal laminated glass for all exterior windows and glazed doors with 3/8” minimum frame bite for structural glazed windows and 1” bite for window systems that are not structurally glazed.

The requirement to design and retrofit existing floor slabs (with FRP or similar top slab reinforcing) to withstand upward blast loads as given by paragraph B-2.1.3 of UFC 4-010-01 shall be treated as a bid option to this project since this floor slab requirement is not required in accordance with the interim 1999 AT/FP standards.

The offerors shall incorporate all AT/FP concept design report and the Site Development Plan (paragraph 3-5) into their design proposal submissions and shall include associated retrofit costs in their price proposal submissions. The AT/FP concept design and the Site Development Plan (paragraph 3-5) shall be the basis for final design and actual construction. The AT/FP concept design retrofit upgrades shall be integrated with the seismic rehabilitation plan described in the following paragraph, so that strengthened/new structural members may serve dual functions. Anti-terrorism/force protection design shall be comply with the statement of work chapters on Historical Preservation.

6-5.6 **Seismic Evaluation and Rehabilitation.** Army regulations require that the buildings of Quad C be evaluated to determine possible requirements for structural rehabilitation to mitigate seismic hazards. The Government has prepared an independent seismic evaluation and rehabilitation (concept seismic design) report to minimize risks to offerors due to unknown conditions. The seismic concept design report entitled, “Seismic Evaluation and Rehabilitation Report, by Mitsunaga and associates, Inc, dated May 2003 is attached to this RFP. The offerors shall incorporate the seismic concept design into their design proposal submissions, and include seismic rehabilitation costs in their price proposal submissions. To give the offeror the opportunity for design innovation and economy, the design proposal need not follow the concept design exactly, provided the seismic forces specified in the report are accounted for in a rational analysis developed by a licensed structural engineer, and load path requirements are met. The seismic design criteria for the seismic concept design include TI 809-05, Seismic Evaluation and Rehabilitation for Buildings, and TI 809-04, Seismic Design of Buildings. The winning offeror shall incorporate the newer seismic design criteria listed in paragraph 6-2, Design Criteria (IBC 2000 as amended by UFC 1-200-01) as a basis for their final seismic design.

As stated in the previous paragraph, requirements for seismic rehabilitation shall be integrated with AT/FP

retrofit requirements.

6-5.7. **Concrete Damage Repair.** No major concrete repairs are anticipated. Miscellaneous spalling and cracking shall be repaired following methods prescribed in EM 1110-2-2002, Evaluation and Repair of Concrete Structures.

6-5.8 **Existing and New Structural Systems.** Existing structural systems shall be analyzed and retrofitted to insure new live loads provided in section 6-2 (including IBC 2000 and/or Table 6-1) can be supported. New live loads shall include new cooling tower, machine rooms and arms rooms.

# CHAPTER 7

## THERMAL PERFORMANCE

7-1 **THERMAL CHARACTERISTICS**. Building construction shall conform to the current version of ASHRAE 90.1. All buildings shall be classified as non-residential. R and U values shall be calculated in accordance with ASHRAE methods.

7-2 **THERMAL INSULATION**.

Characteristics. Thermal insulation shall have a flame-spread rating of 25 or less and a smoke-development rating of 50 or less, exclusive of the vapor barrier, when tested in accordance with ASTM E84. A vapor barrier shall be provided on the warm-in-winter side of exterior wall and ceiling insulation. Polyurethane is allowed as an insulation material for slabs and outside concrete or unit masonry walls. It is prohibited as an injected insulation material in walls or floor cavities or within the building envelope.

7-3 **INFILTRATION**. To limit air infiltration, buildings will be sealed with an air infiltration barrier, installed in accordance with the manufacturer's recommendations. The building envelope shall be caulked, gasketed, weatherstripped or otherwise sealed: around window and door frames, between wall cavities and frames, between walls and ceiling and roof, between walls and floors, at access doors and panels, at utility penetrations through walls, floors, and roofs, and at any other exterior envelope joint which may be a source of air leakage. These steps shall constitute tight building construction.

# CHAPTER 8

# PLUMBING

## 8-1 GENERAL REQUIREMENTS

8-1.1 **Plumbing scope**. The plumbing requirements for the project, as indicated in this Chapter, are generally contained within this chapter unless otherwise noted. Other plumbing scope indicated by other Chapters and the Attached Concept Design Documents (Drawings, Plumbing Calculations), which are to be used for the design of this project, are subject to requirements in this section. All requirements within this Chapter shall take precedence over any conflicting requirement in other Chapters, Attachment Concept Design Documents or any other criteria and shall be brought to the attention of the Contracting Officer for resolution in writing. All definitions and acronyms used in this section are intended to be used for this section only unless otherwise noted. Catalog cuts in the attachments are not intended to be exact equipment provided. Equipment shall be similar to catalog cuts and based on design developed after award.

8-1.2 **Design Standards and Codes**. Plumbing system shall be designed and installed in accordance with the latest edition of the International Plumbing Code (IPC) and the references listed below. Inspection and testing of the plumbing system shall be performed as prescribed in the IPC. Specified materials and equipment shall be standard products of a manufacturer regularly engaged in the manufacturer of such products. Specified equipment shall essentially duplicate equipment that has performed satisfactorily at lease two years prior to bid opening. System design and installation must conform to the following mandatory energy and water conservation criteria.

**8-2 APPENDIX AND RECOMMENDATIONS.** Plumbing design criteria in general that are stated in any reference, which are either in the appendix, stated as a recommendation or addressed with a “should” shall be considered to be mandatory requirements and will be incorporated into the design.

## 8-3 DESIGN CALCULATIONS

8-3.1 **Hot water heater calculations**. Design shall be based on the methods described in ASHRAE 1999 Applications Handbook. Use calculations in the attachments for determining storage capacity and recovery rate. Hot water shall be stored at 60 deg. C (140 deg. F) and tempered to provide hot water to the hand sinks and lavatories in the employee toilets at 43 deg. C (110 deg. F). 60 deg. C (140 deg. F) hot water shall be supplied to food preparation sinks, vegetable preparation sink and the pot and pan sink. 82.2 deg (180 deg. F) hot water will be provided to the dishwashers, pot and pan rinse sink and hose bibb at the field feeding equipment room. An electric water heater shall be provided at each location to boost the temperature from 60 deg. C (140 deg. F) to 82.2 deg. C (180 deg. F). Provide a hot water recirculation pump if hot water piping extends further than 15.2 meters (50 feet). Hot water heater and storage systems for the barracks occupancies shall be sized in accordance with ETL 1110-3-489. The hot water and storage systems for the barracks occupancies shall be added to the other hot water demands, including, but not limited to, clothes washers and kitchen areas, to obtain the total hot water demand and storage required.

8-3.2 **Piping.** Design shall be based on the IPC for domestic water, sanitary waste and vent piping. All water piping shall be sized in accordance with methods outlined in the IPC, to limit water velocity to 2440 mm/sec (8 ft/sec) unless a lower velocity is recommended by the plumbing fixture manufacturer(s).

## 8-4 EQUIPMENT

8-4.1 **Water Heater.** Water heater types and capacities shall be as indicated in the Attached Concept Design Documents (Drawings, Plumbing Calculations) and shall conform to the requirements in UFGS. Water heaters shall be sized in accordance with paragraph 8.3.1 for a 32 deg. C (90 deg. F) rise. Water heater energy factors shall meet or exceed the minimum requirements of 10 CFR Part 434 and shall be Energy Star or with efficiencies in the upper 25% of what is available.

8-4.2 **Storage Tanks.** Hot water storage tanks shall be of type and capacity as indicated in the Attached Concept Design Documents (Drawings, Plumbing Calculations) and shall conform to the requirements in UFGS. Storage tanks shall be the construction of one manufacturer, AMSE stamped for the working pressure, and shall have the National Board (ASME) registration. The tank shall be cement-lined or glass-lines steel type in accordance with AWWA D100. Tanks shall be equipped with a pressure gauge and thermometer, 155 mm (6 inch) minimum diameter face.

8-4.3 **Circulation Pumps.** Hot water circulation pumps shall be of type and capacity as indicated in the Attached Concept Design Documents (Drawings, Plumbing Calculations) and shall conform to the requirements in UFGS. Pump motors shall be non-overloading at any point on the pump curve. Pump and motor shall be standard mechanically coupled. C-face motors shall not be allowed. Pumps shall be mounted concrete housekeeping pads. Pumps shall be equipped with a pressure gauge 155 mm (6 inch) minimum diameter face on the inlet and discharge of each pump. Pumps shall be provided whenever hot water piping extends further than 50 feet from a tank.

8-4.4 **Booster Pumps.** Variable speed pumping system shall provide a minimum of 413.7 kPa (60 psi) by varying speed and number of operating pumps. The factory prepiped and prewired assembly shall be mounted on a steel skid frame complete with pumps, variable speed drives, motors, and controls. The variable speed drives shall be the oil-filled type capable of power transmission throughout their complete speed range without vibration, noise or shock loading. Each variable speed drive shall be run-tested by the manufacturer for rated performance, and the manufacturer shall furnish written performance certification. System shall have suppressors to prevent noise transmission over electric feed lines. Required electrical control circuitry and system function sensors shall be supplied by the variable speed drive manufacturer. The primary power controls and magnetic motor controllers shall be installed in the controls supplied by the drive manufacturer. The sensors shall be located in the system to control drive speed as a function of constant pump discharge pressure. Connection between the sensors and the variable speed drive controls

shall be accomplished with copper wiring. Controls shall be in NEMA 250, Type 1 enclosures.

8-4.5 **Factory authorized supplier.** The equipment shall be furnished by a factory authorized supplier within a distance of 500 miles of the installation site.

**8-5 FIXTURES.** The following fixtures will be acceptable for the facilities on this project except where noted otherwise for specific buildings. Where indicated, fixtures shall be handicap accessible type in accordance by ADAAG. Fixtures shall be water conservation type, in accordance with the IPC. Fixtures shall be provided complete with fittings and chromium- or nickel-plated brass (polished bright or satin surface) trim. All fixtures, fittings and trim in the project shall have the same finish.

8-5.1 **Requirements.** Vitreous china plumbing fixtures shall conform to ASME A112.19.2, Vitreous China Plumbing Fixtures. Stainless steel fixtures shall be in accordance with ASME A112.19.3, Stainless Steel Plumbing fixtures (residential design). Plastic fixtures shall conform to IAPMO Z124. Enameled cast iron plumbing fixtures shall comply with ASME A112.19.1, and enameled steel fixtures shall comply with AMSE A112.19.4.

8-5.2 **Traps.** Exposed traps shall be chromium-plated, adjustable-bent tube, 20-gauge brass. Concealed traps may be plastic (ABS).

8-5.3 **Faucets.** Faucets, other than faucets provided for the dining facility, shall be single-control type, with seals and seats combined in one replaceable cartridge designed to be interchangeable among lavatories and kitchen sinks, or having replaceable seals and seats removable either as a seat insert or as part of a replaceable valve unit. Water flow shall be no more than 0.158 L/s (2.5 GPM) from any faucet.

8-5.4 **Showers.** Showers shall be equipped with a combination valve and flow control device to limit the flow to 0.158 L/s (2.5 GPM) at pressures between 137.9 to 413.7 kPa (20 and 60 psi).

8-5.5 **Water closets.** Water closets shall have elongated bowl with flush tank, floor outlet with wax gasket and open-front seat. An adequate quantity of water shall be provided to flush and clean the fixture served. The water supply to flush tanks equipped for manual flushing shall be controlled by a float valve or other automatic device designed to refill the tank after each discharge, and to completely shut off the water flow to the tank when the tank is filled to operational capacity. Water closets having their flush valve seat located below the flood level rim of the closet bowl shall have a ballcock installed within a sheath or in a separate and isolated compartment of the tank, both to have visible discharge onto the floor in case of failure. Provision shall be made to automatically supply water to the fixture so as to refill the trap seal after each flushing.

8-5.6 **Urinals.** Urinals shall be flush valve, wall mounted type and shall meet the requirements of the code.

8-5.7 **Lavatories.** Lavatories shall be rectangular type, minimum 508 by 457 mm (20 by 18 inches). Lavatories shall be vitreous china or cast iron, self-rimming or wall hung type. Lavatories shall be furnished with hot and cold water and have pop-up drains. Lavatories shall meet the requirements of the code.

8-5.8 **Showers.** Shower stalls shall be of ceramic tile, floor to ceiling, over membrane waterproofing on a cementitious substrate; or gel-coated, glass-fiber reinforced polyester. Shower receptors shall be slip resistant cast stone. Shower stall wainscots shall be ceramic tile.

8-5.9 **Kitchen sinks.** Kitchen sinks, other than sinks provided for the dining facility, shall be Type 302 stainless steel, 20-gauge minimum, seamless drawn and sound deadened. Sinks shall be single or multiple bowl with self-rimming, complete with cup strainer and plug. Kitchen sinks shall meet the requirements of the code. Kitchen sinks shall be provided with a garbage disposer. Garbage disposer shall have a minimum capacity of 0.75 kW (1 HP), 1.48 L (50 oz.) grind chamber, stainless steel grind chamber

and grind elements, corrosion protection shield and two-way grinding action.

8-5.10 **Service sinks.** Service sinks shall meet the requirements of the code.

8-5.11 **Electric water coolers.** Units shall be electric refrigerated type and shall conform to the requirements of ARI 1010 and the Lead Contamination Control Act of 1988.

8-5.12 **Handwash sink.** For the handwash area, provide 2 each, 4 station wall mounted wash sink of stainless steel construction, cold water only.

**8-6 PIPING SYSTEMS.** Piping shall be concealed. Individual shutoff or stop valves shall be provided on water supply lines to each plumbing fixture, piece of equipment except showers and on takeoffs from risers to each floor. Shutoff valves shall be provided for each bathroom group. Pipe and fittings shall be as follows:

8-6.1 **Water piping.** System design, component selection and system installation, including pressure containing parts and material, shall be based upon a minimum service pressure of 862 kPa at 66 degrees C (125 psi at 150 degrees F); minimum ANSI Class 125.

8-6.1.1 Cold water aboveground. Water piping above grade shall be hard-drawn copper tubing, Type K or Type L.

8-6.1.2 Hot water aboveground. Water piping above grade shall be hard-drawn copper tubing, Type K or Type L.

8-6.1.3 Cold water below ground. Water piping below ground shall be in accordance with Chapter 4 Site Engineering.

8-6.1.4 Hot water below ground. Provide prefabricated insulated pipe and fittings. Foam insulation for prefabricated insulated pipe and fittings shall be polyurethane foam meeting the requirements of ASTM C 591 having a density of not less than 32 kg per cubic meter (2 pcf). Carrier pipe shall be in accordance with Chapter 4 Site Engineering.

8-6.1.5 Fittings for soft copper tubing shall conform to ASME B16.18 and for hard-drawn to ASME B16.22.

8-6.2 **DWV piping.** Soil, waste, vent and drain piping shall be service weight cast iron pipe except for piping serving beverage areas in the dining facility. Provide high silicon content cast iron pipe and fittings, for beverage areas.

8-6.2.1 Underground piping and fittings shall be hub pipe, ASTM A 74.

8-6.2.2 Aboveground piping and fittings shall be no-hub, CISPI 301 and ASTM A 888, or hub pipe, ASTM A 74.

8-6.2.3 Provide high silicon content cast iron pipe and fittings, ASTM A518A and ASTM A518M, on branch lines from beverage areas and other areas handling carbonic acid to the building sewer drain line. Provide sufficient high silicon content cast iron pipe so that carbonic acid waste can be diluted by the other building waste as to prevent corrosion of the piping.

8-6.2.4 A waiver from TI 800-01, Appendix C, paragraph 19b to allow sanitary sewer lines above the dining facility in Quad C has been granted by HQ USACE as long as the following requirements are met:

1. All openings through floors over the dining facility shall be provided with sleeves securely

bonded to the floor construction and projecting not less than 3/4 inch above the top of the finished floor with space between sleeve and pipe or duct sealed.

2. Floor and shower drains installed over the dining facility shall be equipped with integral seepage pans.

3. Floor and shower drains installed above the dining facility shall be of the wall mounted type except bathtubs. Tubs shall have waste and overflow connections made above the floor piped to the trap below the floor. Connections through floors and traps shall conform with the International Plumbing Code. No floor openings, other than sleeve for waste pipe, will be permitted for tubs.

4. All other soil or drain pipes shall be as indicated in this statement of work. Cleanouts shall be extended through the floor construction above.

5. Soil and drain pipes located above the dining facility shall be subjected to a standing water test of not less than 25 feet.

6. Piping subject to operation at temperatures that will form condensation on the exterior of the pipe shall be thermally insulated.

7. Where pipes are installed in ceilings above the dining facility, the ceiling shall be of the removable type, or shall be provided with access panels in order to form a ready access for inspection of piping.

8-6.3 **Gas piping.**

8-6.3.1 Underground gas piping shall be polyethylene pipe, ASTM D 3350 and ASTM D 2513, or fiberglass pipe, ASTM D 2517, and be installed in accordance with UFGS.

8-6.3.2 Aboveground gas piping shall be seamless galvanized steel pipe, ASTM A53, Type S, Grade B, and be installed in accordance with UFGS.

**8-7 MISCELLANEOUS ITEMS**

8-7.1 **Cleanouts.** Cleanouts shall be provided at each change in direction of sanitary sewer lines, at the intervals specified in the NSPC and at the building service entrance. All cleanouts shall be permanently accessible. Cleanouts-to-grade shall be installed in a 305 by 305 mm (12 by 12 inch) concrete pad, flush with grade. Wall and floor types shall be provided as required by the code. Access panels or cover plates shall be provided in exposed areas.

8-7.2 **Hose bibbs.** Hose bibbs shall be provided at each exterior face of the building and shall be no more than 30 meters (100 feet) apart. Hose bibbs shall be supplied with an integral vacuum breaker.

8-7.3 **Backflow preventers.** Backflow preventers shall be provided as required by the code.

8-7.4 **Grease Traps.** Grease interceptor shall be pre-cast concrete, HS20 vehicular traffic rated, complete with cast iron manhole frames and airtight covers. Grease interceptor shall meet or exceed ASTM C 1227-02b. Manholes shall be a minimum of 609 mm (24 inches) in diameter. All waste from the first floor of Building 357, except from toilet areas, shall be piped to grease traps.

**8-8 PIPE INSULATION.** Minimum insulation thicknesses and performance shall be in accordance with UFGS.

8-8.1 **Domestic service hot water piping.** Aboveground domestic service hot water pipe mains and laterals shall be insulated with rigid fiberglass type insulation in accordance with UFGS. Below grade domestic service hot water pipe mains and laterals which are not prefabricated, insulated pipe, shall be insulated with cellular glass type insulation in accordance with UFGS. Hot water drops to fixtures located in walls are not required to be insulated.

8-8.2 **Equipment.**

8-8.2.1 Hot water storage tanks. Hot water storage tanks shall be insulated with cellular glass type insulation in accordance with UFGS.

8-8.2.2 Hot water circulation pumps. Hot water circulation pumps shall be insulated with cellular glass type insulation in accordance with UFGS.

# CHAPTER 9

# ELECTRICAL SYSTEMS

## 9-1. BUILDING ELECTRICAL SYSTEM

9-1.1. **Conformance to Code**: The electrical system shall be designed in compliance with the rules and recommendations of ANSI C2, National Electrical Safety Code (NESC) 2002 edition, NFPA 70, National Electrical Code (NEC) 2002 edition, UFC 3-520-01 Interior Electrical Systems, TM 5-811-1 Electrical Power Supply Distribution, TI 800-01 Design Criteria, and TI 811-16 Lighting Design.

9-1.2. **Electrical Service**: Electrical system characteristics for building services shall be 277/480 volts, three-phase, 4-wire, 60 Hertz, grounded neutral.

9-1.3. **Capacities**: Dwelling unit cooktops, range hoods, and garbage disposers are part of Option Number 2. If Option Number 2 is not awarded, cooktops, range hoods, and garbage disposers will be installed at a later date. Therefore, the proposer shall size electrical work to include cooktops, range hoods, and garbage disposers, including but not limited to overcurrent protection, transformers, electrical services, feeders, panelboards and loadcenters, etc.

9-1.4. **Emergency Power**: The dining facility electrical system shall include provisions for connecting a Government Furnished, Government Installed portable generator to power critical dining facility loads (code required emergency systems, refrigeration units, igniter circuits for gas cooking appliances, cooking exhaust systems, limited lighting, etc.) during power outages. Coordinate portable generator requirements with the DPW.

9-1.5. **Late Turn-Over**: Building 355 will not be turned over to the Contractor for construction with the balance of the project. Instead, this building will remain occupied and in service during the beginning of the construction period. Turn over date for this building is indicated elsewhere in these specifications. The Contractor is responsible to retain electrical services (power, telephone, signals, etc.) to this building until it is turned over to him for construction. This building must remain accessible to military personnel and the public until it is turned over for construction. In addition base personnel and various contractors must access building systems, support infrastructure, etc. to maintain the building in service. The Contractor's operations shall not obstruct access to the building or supporting infrastructure until such time as the building is turned over for construction. Additional phasing requirements are discussed elsewhere in these specifications.

9-1.6. **Temporary Power**: Building 355 includes a PBX that serves surrounding buildings and quads. The PBX must remain in service at all times. Provide temporary power for the PBX throughout project construction. At the completion of construction the PBX shall be connected to the Building 355 electrical system. The PBX must be accessed by various contractors and utility personnel for repair, maintenance, operations, etc. The Contractors operations shall not obstruct access to PBX room at any time.

9-1.7. **Overcurrent Protection**: Overcurrent protection shall be provided for each feeder. Service entrance equipment for each building shall be grouped together and located in the electrical room. The service entrance equipment shall include electric watt-hour meters with integral demand meters. Provide locking seal on meter socket rings. Metering shall be located in an area readily accessible by service personnel. Manual by-pass and test facilities shall be provided for each socket. Metering within a building shall be grouped at one location at the building. Meter sockets shall have provisions for securing the locking ring to prevent removal of the meter by unauthorized personnel. Metering shall be connected to the Quad C DDC

system for monitoring of energy usage. Meter Service entrance conductors shall be sized in accordance with the National Electrical Code. Service feeders shall be underground.

9-1.8. **Loadcenters**: Loadcenters shall be allowed for branch circuits in dwelling units only, to serve dwelling unit loads. Loadcenters shall be rated not less than 70 amperes, mounted in the interior walls of the dwelling unit, and readily accessible. Offset a minimum of 400 mm (16 inches) horizontally back-to-back load centers/panelboards. No recessed loadcenters are to be located in fire walls. Loadcenters shall have separate neutral and ground buses. Load centers shall be circuit breaker type installed in painted galvanized steel recessed, dead-front enclosures. Provide at least 25% spare spaces in each loadcenter. The Amps Interrupting Current (AIC) rating of loadcenters shall be as calculated in the short circuit analysis but shall not be, in any case, less than 10,000 AIC.

9-1.9. **Panelboards**: Panelboards shall be rated not less than 150 amperes, mounted in the interior wails, and readily accessible. Offset a minimum of 400 mm (16 inches) horizontally back-to-back load centers/panelboards. No recessed panelboards are to be located in fire walls. Panelboards shall have separate neutral and ground buses. Panelboards serving non-linear loads (computers, etc.) shall be provided with neutral busses sized at 200% of phase busses. Panelboards shall be industrial bolt-on circuit breaker type installed in painted galvanized steel recessed, dead-front enclosures. Provide at least 25% spare spaces in each panelboard. The Amps Interrupting Current (AIC) rating of panelboards shall be as calculated in the short circuit analysis but shall not be, in any case, less than 10,000 AIC for panelboards operated at 208Y/120 volts and 14,000 AIC for panelboards operated at 480Y/277 volts.

9-1.10. **Outlet Circuits**: Lighting and convenience outlets shall be on separate circuits. Convenience outlets shall be grounded, duplex type, 2 pole, 3 wire. Dwelling unit receptacles shall be rated 15 amperes minimum at 125 volts and connected to 20 amperes minimum branch circuits. Receptacles located in areas other than dwelling units shall be rated 20 amperes minimum at 125 volts and connected to 20 amperes minimum branch circuits. Outlets provided for specified appliances or equipment shall be of the appropriate type and rating. Receptacles shall be grounded and flush mounted in walls and partitions. All receptacles requiring ground fault protection shall be integral with the receptacle. Outlets on party walls shall be offset 610 mm (24 inches) to maintain integrity of the fire wall and sound deadening rating of the wail. Outlets in Telecommunication Rooms (TR) or closets shall be 2 pole, 3 wire, 20 ampere rated with at least two 20 amp, dedicated circuits.

9-1.11. **Conduit and Wiring**: Conduit and wiring shall not be run in concrete slabs-on-grade. Where runs are below concrete slabs-on-grade and in direct contact with earth or fill, conduit shall be of the coated rigid steel thick wall conduit, coated intermediate metal conduit or Schedule 40 polyvinyl chloride (PVC) type. Elsewhere, conduit where required shall be either of the galvanized thick-wall conduit, intermediate metal conduit, or electrical metallic tubing (EMT) type, except that EMT shall not be installed in concrete, exposed to the weather or in other wet locations.

9-1.12. **Calculations and Drawings**: As a minimum, calculations shall be provided for the following: a) lighting for each room and area; b) load analysis to include connected and estimated demand-separate loads by categories such as lighting, receptacles, HVAC, etc; c) voltage drops-do not exceed limits given in the NEC and TM 5-811-1 Electrical Power Supply Distribution; d) short circuit and overcurrent coordination-provide data to verify proper protection and coordination is provided for the equipment/systems. Complete single line diagrams shall be provided with calculations of available short circuits at transformer, all switchboards, panelboards, and loadcenters. Load calculations for each building shall be provided and conform to Article 220 of the NEC. Barracks load calculations shall include cooktops and range hoods, regardless of whether Option Number 2 is awarded or not. Illumination levels shall conform to IES standards and TI 800-01, Chapter 12, table 12-4.

9-1.13. **Historic Preservation**: Any electrical work in or on Buildings 355, 356, 357, or 358, visible from the exterior shall resemble work to be expected on the buildings when originally constructed. Of specific concern are luminaires visible by viewers located outside the buildings, either inside or outside the quad. Luminaires in the building that can be obstructed with window coverings are not a concern. Luminaires located in the exterior covered walkways are not a concern provided they are mounted on the interior face of exterior columns so that they are not visible to viewers standing outside the buildings.

9-1.14. **Building Security Lights**: Outdoor 70-watt high-pressure sodium luminaires shall be provided on the sides of each building to illuminate the perimeter of the building. Quantity and location of fixtures shall be situated to eliminate shadow areas where intruders could remain undetected, yet be coordinated with the architectural features of the structure to minimize spill light into an adjacent building. Luminaire circuit shall be photocell controlled. All luminaires shall be grounded to conform with Article 410 of the NEC and shall be rated for the environment to which the luminaires are exposed. Selection of luminaires shall be based on energy-savings and aesthetics. Outdoor luminaires shall be UL listed as suitable for wet locations and shall have vandal-proof polycarbonate type lens or otherwise impact resistant plastic lens. All luminaires shall be complete with lamps.

9-1.15. **Interior Lighting**: The design of interior lighting shall be in accordance with the fundamentals and recommendations of the IES Lighting Handbook, TI 811-16 Lighting Design, and TI 800-01 Design Criteria.

9-1.15.1. Lighting Intensities: Lighting intensities shall conform to those required by the IES and TI 800-01, Chapter 12, table 12-4. The IES intensities were published as minimums for specific tasks. However, the IES intensities shall be considered target design levels not to be changed significantly. The upper lighting levels shall be considered as maximum design levels.

9-1.15.2. Controls: Lighting controls shall be time clock or photoelectric, or both, for general indoor and outdoor lighting. Automatic dimming to supplement day lighting or occupancy sensors may be considered. Dimming systems may be used to reduce voltage and increase lamp life.

9-1.15.3. Efficiency: Interior lighting will be both efficient and color corrected. Color Rendering Index (CRI) of 85 or better and a standard lighting color of 3500 K are required. Lamps shall be of low mercury type that meets EPA's TCLP (Toxic Characteristic Leaching Procedure) tests and are classified as nonhazardous waste. For 1220 mm (4 ft) fluorescent light fixtures, provide T8, 32-watt lamps. Polystyrene lens is not acceptable. Acrylic diffusers shall be provided. Recessed fluorescent luminaires shall have 0.6604 mm (0.026-inch) minimum thickness for metal housing. Surface mounted fluorescent luminaires shall have 0.8128 mm (0.032-inch) minimum thickness for metal housing. Luminaires on ceilings less than 2250 mm (7 feet-6 inches) above the floor shall be recessed flush type.

9-1.15.3.1. Fluorescent luminaires shall have ETL certified, rapid start, energy saving, high power factor, electronic ballasts with automatic resetting thermal cutout protection, ANSI sound rating "A". Energy saving ballasts shall be CBM certified full light output type.

9-1.15.3.2. Electronic ballast shall as a minimum meet the following characteristics:

a) Ballast shall comply with UL 935, ANSI C82.11, and NFPA 70 unless specified otherwise. Ballast shall be designed for the wattage of the lamps used in the indicated application. Ballasts shall be designed to operate on the voltage system to which they are connected.

b) Power factor shall be 0.95 (minimum).

c) Ballast shall operate at a frequency of 20,000 Hertz (minimum).

d) Ballast shall have light regulation of plus or minus 10 percent lumen output with a plus or minus 10 percent input voltage regulation. Ballast shall have 10 percent flicker (maximum) using any compatible lamp.

e) Ballast shall be UL listed Class P with a sound rating of "A."

f) Electronic ballast enclosure shall be similar in physical size and physically interchangeable with an electromagnetic ballast. Ballast shall have circuit diagrams and lamp connections displayed on ballast packages. Ballast shall operate lamps in a parallel circuit configuration that permits the operation of remaining lamps if one or more lamps fail or are removed.

g) Ballast shall operate in rapid start mode.

h) Electronic ballast shall have a full replacement warranty of 5 years from date of manufacture as specified in paragraph entitled "Electronic Ballast Warranty" herein.

9-1.15.3.3. T-8 Lamp Ballast

a) Ballast shall be capable of starting and maintaining operation at a minimum of 10 degrees C (50 degrees F) for F32T8 lamps, unless otherwise indicated.

b) Total harmonic distortion (THD): Shall be 20 percent (maximum).

c) Input wattage.

(1) 32 watts (maximum) when operation one F32T8 lamp.

(2) 62 watts (maximum) when operating two F32T8 lamps

d) Three lamp fixtures shall have two ballasts per fixture.

9-1.15.3.4. Furnish the electronic ballast manufacturer's warranty. The warranty period shall not be less than 5 years from the date of manufacture of the electronic ballast. Ballast assembly in the lighting fixture, transportation, and on-site shall not exceed 12 months, thereby permitting 4 years of the ballast 5-year warranty to be in service and energized. The warranty shall state that the malfunctioning ballast shall be exchanged by the manufacturer and promptly shipped to the using facility. The replacement ballast shall be identical to, or an improvement upon, the original design of the malfunctioning ballast.

9-1.15.4. Emergency Lighting: Provide emergency lighting utilizing integral battery packs in fluorescent luminaires to illuminate exit paths. Emergency lighting shall be connected to unswitched legs of the lighting branch circuit serving the area. Dual head emergency lights with battery backup shall be provided in areas where use of integral battery packs is not feasible.

9-1.15.5. Illuminated exit signs with battery backup shall be required to mark all emergency exits and passageways, as required by NFPA 101, Life Safety Code. Exit signs shall be energy efficient LED types.

9-1.15.6. Arms Vaults Lighting: Ceiling mounted fluorescent light fixtures shall be provided for the Arms Vaults. The illumination level required for the Arms Vault shall be 750 Lux (75 footcandles). Arms vaults shall also have a light fixture located directly outside the arms vault door and controlled by a switch within the secured area of the arms room.

9-1.15.7. Accent Lighting: Provide special or accent lighting for main entries, conference rooms, lobbies, and/or other unique areas. Accent lighting shall be required for special graphics or displays.

9-1.15.8. Gym Lighting: Remove existing gymnasium lighting and provide new gymnasium lighting in accordance with IES recommendations and design guidance using a metal halide light source for color rendition. Provide dual head battery pack type emergency lighting units in the gymnasium.

9-1.16. **Smoke Detectors: See Chapter 12, Fire Protection**. Smoke detectors shall not be located in close vicinity of the bathroom entrance to preclude false alarms. Detectors shall be of the ionization or photo-electric type conforming to the requirements of Underwriters Laboratories Standards No. 217. Detectors shall bear labels, indicating compliance with standards, by a recognized independent laboratory that maintains periodic inspection of production and testing of the detectors provided.

9-1.17. **Door Chimes**: Push buttons shall be provided at front entrances to each dwelling unit. The system shall include wiring, push buttons, transformer and chimes. System shall be designed for operation at less than 50 volts. Splices in wiring shall be made only where they will be accessible upon completion of the building.

9-1.18. **Branch Circuits and Convenience Outlets**: Provide a minimum of one general purpose 120 volt, 20 or 15 ampere duplex receptacle outlet in each room. In rooms where walls exceed 3 meters, provide an additional duplex outlet for each additional 3 meters of wall or fraction thereof. Receptacle spacing shall not exceed 3 meters. Not more than 8 general purpose convenience duplex receptacles shall be connected to a single branch circuit. Not more than 4 general purpose convenience duplex receptacles serving computer workstations shall be connected to a single branch circuit with a non-shared neutral. The general purpose receptacles are in addition to receptacles dedicated for special equipment and appliances (such as refrigerators and microwaves), which shall be on dedicated circuits. Provide dedicated receptacle circuits for FAX, copy machine equipment, and laser printers and coordinate the locations with the users. Ground fault circuit interrupter (GFCI) receptacles shall be 15A or 20A, 120V with test and reset button integral with the receptacle. GFCI receptacles shall not be used in "feed thru" applications to protect downstream receptacles on the same branch circuit.

9-1.18.1. Dwelling Unit Bedrooms: All branch circuits that supply 120 volt, single-phase 15 and 20 ampere outlets in dwelling unit bedrooms/sleeping areas shall be provided with arc-fault circuit interrupters in accordance with NEC 210.12.

9-1.18.2. Bathrooms: A duplex, ground fault circuit interrupter (GFCI) receptacle shall be provided adjacent to the lavatory. Bathroom receptacle outlets shall be supplied by at least one 20-ampere branch circuit. Such circuit shall not have other outlets.

9-1.18.3. Typical Dwelling Unit Loads: Each dwelling unit shall be provided with a loadcenter. Electrical loads for that dwelling unit shall be connected to the respective dwelling unit loadcenter, including but not limited to:

a) Cooktop (Option Number 2)

b) Range Hood (Option Number 2)

c) Garbage Disposal (Option Number 2)

d) Refrigerator

e) Microwave Oven

f) Air Handler Unit

Should Option Number 2 not be awarded, provide spare circuits in each dwelling unit loadcenter for future installation of the cooktop, range hood, and garbage disposal. Breakers for cooktops shall be interspersed on the dwelling unit loadcenters so that when cooktops are installed, loading on the three electrical phases will be balanced.

9-1.18.4. Ground fault circuit interrupter (GFCI) receptacles shall be provided in accordance with the NEC.

9-1.18.5. Hallway outside bedrooms. For hallways of 3000 mm (10 feet) or more in length, at least one duplex receptacle shall be provided.

9-1.18.6. Entrance. A weatherproof, duplex, ground fault circuit interrupter (GFCI) receptacle shall be provided near each entrance to each building.

9-1.19. **Non-Linear Loads**: In all areas where nonlinear load type equipment predominates such as computers, printers, uninterruptible power supply (UPS), motors with variable speed drives, electronic ballasts and dimmers and other similar loads, ETL 1110-3-403, "Electrical Power Systems for Nonlinear Loads" dated 30 June 1989; IEEE Std 1100 "Powering and Grounding Sensitive Electronic Equipment", IEEE Std. 519, "Practices and Requirements for Harmonic Control in Electrical Power Systems" shall be used as design guides. Additionally, the use of 75 or 90 degree C (minimum) terminals and insulated conductors is required and shall be so stated in the project and identified in the RFP documents. Use 75 degree C conductors on circuits with protective device terminals rated for 60 degree C is inappropriate. National Electrical Code (NEC) and Underwriter's Laboratory (UL) rules and instructions shall be followed in applying the ampacity tables in the NEC beginning with Table 31-6. Since virtually all electrical equipment that meets the approval required by article 110-2 of the NEC is UL listed, the equipment must be installed in accordance with UL instructions. The basic rule of the UL Electrical Construction Materials Directory states that, in general, "the termination provisions are based on the use of 60 degree C ampacities for wire sizes No. 14-1 AWG and, 75 degree C ampacities for wire sizes Nos. 1/0 AWG and larger, as specified in Table 310-16 of the National Electrical Code." Higher rated conductors than specified may be used if the size is based upon the previous statements. Panelboards and loadcenters serving nonlinear loads shall have double-rated neutral busses. Motors connected to the same power source as nonlinear loads shall be upgraded in size similarly. True RMS sensing meters, relays, and circuit breaker trip elements shall be used with nonlinear loads.

9-1.20. **Transformers:** Transformers and dielectrics shall be selected and applied in accordance with ETL 1110-3-412 "Transformer Application Guide". For those areas with high nonlinear loads, "K" factor rated transformers are required. Provide a schedule identifying the “K" factor rating for each area. Ratings shall be based upon type of load served. Interior transformers having a primary voltage less than 600 volts shall be of the ventilated-dry-type and shall not exceed 500 kva capacity. Heat load calculation shall be provided to ensure temperature rise is acceptable.

9-1.21. **Wiring**: Conductors shall be copper, 12 AWG minimum for power and lighting circuits. Aluminum conductors are not allowed. Conductors No. 10 AWG and smaller shall be solid, and those No. 8 AWG and larger shall be stranded. Unless indicated otherwise, all wiring, installed in galvanized rigid steel conduit (GRS), intermediate metal conduit (IMC) or electrical metallic tubing (EMT), shall be 600 volts, type THW, THWN, XHHW or RHW, except that grounding wires may be type TW. The wiring methods in the various parts of the facility must be clearly identified on the contract drawings. Underfloor ducts or overhead

raceways for electrical wiring and information systems cabling may be provided in administrative areas with requirement too extensive to be served by wall outlets. Remote-control and signal circuits shall be type TW, THW or TF, No. 14 AWG minimum. Service entrance cables shall comply with UL 854. All wiring shall be concealed.

9-1.22. **Motors**: Motors having a starting current that will cause a 30% transient voltage dip shall have reduced-voltage or current-limiting controllers. The selection of motors and motor controls shall be done in a systematic manner with consideration of the overall efficiency of the system. Motor efficiencies shall meet or exceed the minimum requirements set forth by the Department of Energy where non-proprietary products are available.

9-1.23. **Prewired Workstations**: Coordinate early in the design process with the User and the architect concerning the necessary electrical characteristics of the workstation wiring systems. In order to facilitate a non-proprietary workstation, it may be necessary to provide alternate electrical distribution schemes to match the various methods used in potential supplier's manufactured products. Power and telecomm cables shall be physically separated from each other by metal raceway or metal partitions. See telecommunications section for telecommunications requirements.

9-1.24. **Coordinated Power System Protection**: The electrical interior distribution system requires short circuit calculations to ensure proper coordination of the protective devices. This analysis shall be performed in accordance with TM 5-811-14 Coordinated Power Systems Protection. The envelope of coordination for which the proposer is to be responsible must be shown on the drawings and in the design analysis. Special coordination requirements shall be noted on the drawings. Also, situations where complete coordination is not achievable due to device limitations shall also be noted on the drawings and design analysis.

9-1.25. **Electronic Security Systems**: Electronic security systems shall be designed in accordance with TM 5-853-4 Electronic Security Systems Technical Manual. Arms vaults shall be properly designed for Joint Service Interior Intrusion Detection System (JSIIDS). This limited system is used for interior intrusion detection system (IDS) and consists of a control unit, DTM (a data transmission link such as wire line, fiber optics, coaxial cables, or radio frequency transmission), balanced magnetic switch, capacitance proximity sensor, grid wire sensor, passive ultrasonic sensor, ultrasonic motion sensor, and a duress sensor. Telecommunications entrance facilities shall have Balanced Magnetic Switches (BMS) on their doors.

9-1.26. **Closed Circuit TV (CCTV) Raceway Systems**: A CCTV system will be required to monitor selected building entries, exits, spaces, and areas adjacent to buildings. The CCTV system devices and cabling shall be by the Government. Provide raceways, outlet boxes, junction boxes, terminal cabinets and electrical connections necessary to accommodate the CCTV system. Coordinate CCTV raceway system requirements with DOIM.

9-1.27. **Personnel Alerting System (PAS)**: Provide a PAS for the entire quad in compliance with UFC 4-021-01 Mass Notification Systems. This system shall be compatible with the existing base master transmitting/receiving equipment, which is a microprocessor controlled wireless personnel alerting system. Coordinate PAS requirements with the Military Police Brigade (Physical Security Office) and other cognizant security personnel.

9-1.28. **Point of Sale System**: The dining facility will include a Point of Sale system based either on a cash register type systems or a debit card system. Coordinate specific requirements with the User and provide point of sales system, raceways, wiring, electrical connections, etc.

9-1.29. **Roof Access Pathways**: Various User systems will require pathways for their systems, including but not limited to radio antennas for radio systems. Provide raceways with pullwire from the various user

areas to the roof. Provide adequate 120 volt power and space for equipment. Coordinate power, space and raceway requirements and equipment locations with Users. At the roof provide a weatherproof entrance fitting, sealed to prevent the entry of rodents, insects, etc., for installation of cables, antennas, etc., by others.

9-1.30. **Exterior Enclosures**: Enclosures for switchboards, safety switches, panelboards, motor starters, circuit breakers, and control devices exposed to the weather shall be in NEMA 4X enclosures.

9-1.31. **Public Address (PA) System**: A PA system shall be installed with full coverage within the dining facility, including the kitchen, food preparation areas, serving areas, check-in, snack bar, and dining rooms. Each room and separate area shall have individual volume controls for music, with an override feature for voice announcements. The PA system equipment shall be rack mounted complete with an amplifier, tuner, multi-disk CD player, and microphones. Microphone outlets shall be installed at each check-in stand and the office.

**9-2. TELECOMMUNICATIONS PREMISES DISTRIBUTION SYSTEM (Interior Telecommunication System)**

9-2.1. **Telecommunications Premises Distribution Systems Design**: The premises distribution system (PDS) design shall be in accordance with the Department of Army's Installation Information Infrastructure Architecture (I3A), Design and Implementation Guide, dated April 2001 and the local addendum's to the I3A. Technical criteria to be used for design and construction shall be taken from the most current references at the date of issue of the Request for Proposals (RFP) and shall only be modified as described herein. Codes and standards specifically referred to and those listed below shall be the minimum acceptable criteria.

| STANDARD NUMBER | DESCRIPTION (STANDARDS ARE ADOPTED FEDERAL-GOVERNMENT AND DOD) |
|---|---|
| ANSI/TIA/EIA-568-B | Commercial Building Telecommunications Cabling Standard |
| ANSI/TIA/EIA-569-A | Commercial Building Standards for Telecommunications Pathways and Spaces |
| ANSI/TIA/EIA-570-A | Residential Telecommunications Cabling Standard |
| ANSI/TIA/EIA-598-B | Optical Fiber Cable Color Coding |
| ANSI/TIA/EIA-606-A | Administration Standards for the Telecommunications Infrastructure of Commercial Buildings |
| ANSI/TIA/EIA-607-A | Commercial Building Grounding and Bonding Requirements for Telecommunications |
| ANSI/TIA/EIA-758-1 | Customer-Owned Outside Plant Telecommunications Cabling Standard |
| TIA/EIA-TSB67 | Transmission Performance Specifications for Field testing of Unshielded Twisted-Pair Cabling Systems |
| TIA/EIA-TSB72 | Centralized Optical Fiber Cabling Guidelines |
| TIA/EIA-TSB75 | Additional Horizontal Cabling Practices for Open Offices |
| NEMA WC 66 | Performance Standard for Category 6 and Category 7 100 Ohm Shielded and Unshielded Twisted Pair Cable |
| | |
| * TSB = Telecommunications System Bulletin | |

9-2.1.1. Features of the premise wiring system are as follows:

a. Prewiring of the building in accordance with Federal and National Standards i.e. Telecommunications Industry Association (TIA) and Electronic Industries Association (EIA).

b. Use of 4 pair, 24 AWG, solid conductor, 100 ohm, unshielded twisted-pair (UTP), thermoplastic jacketed, category 6 or better rated copper cables is required for horizontal cabling except where fiber optic cables (FOC) are used or required. If fiber optic cables are used for LAN systems, confirm use of single or multimode fiber optic cable and type of connector with DOIM. All terminations shall be wired in accordance with EIA/TIA 568B.

c. Use of distribution devices, such as patch panels or 110 Blocks shall be installed with wire management devices. RJ21X or 66 Blocks shall not be used.

d. Star wiring architecture from the distribution device is required.

e. Telecommunications outlets shall consist of 2 types as shown in attachment 24, “Telecomm Details”. Type W consists of one jack. Type B consists of 2 jacks. Each jack shall be connected to a dedicated cat 6 cable run back to the telecomm room.

f. Telecommunications outlets shall be installed as follows:

All office rooms--minimum of one type B outlet per 7.43 square meter (80 square feet) of space
Arms Vault--one type W outlet
Conference room--one type B outlet
Lounge--one type B outlet
Gym--one type W outlet
Game room--one type B outlet
Bedroom--one type W outlet in each bedroom
Dining room--one type B outlet near the entrance
Dining check-in room--one type B outlet at each of the two check-in stations (total of 2 outlets)
Kitchen--one type W outlet
Snack Bar--one type B outlet
Classroom--minimum of one type B outlet on each wall
Loft--one type B outlet
Elevator--one type W outlet
SIPRNET Room--one type W outlet

g. Category 6 telecommunication jacks shall be configured in the T568A configuration.

h. Provide a minimum of 12 strands of single mode fiber optic fiber from the main telecommunications room in each building to each telecommunications room in that building.

i. Use of an auxiliary disconnect outlet if necessary.

j. Grounding shall be in accordance with ANSI/TIA/EIA 607 or 758.

9-2.2. **Telecommunications Outlets**: Telecommunications outlets shall be 6 position, Category 6 flush mounted type, wired in the T568A configuration. Each outlet shall have the designated number of 8 conductor, Category 6 cables in a concealed 27 mm (1") or larger EMT conduit. Cabling methods shall comply with the appropriate ANSI/EIA Standard. Cabling and jacks shall be Category 6 and of high quality.

All telecommunications outlets shall have a factory made color identification device so that all users can easily identify voice (blue) or data (green).

9-2.3. Telecommunications Rooms: A telecommunications entrance facility will be placed in each building on the ground floor and with an external door. Besides the main entrance, a telecommunications room shall be placed for every 929 square meters (10,000 square feet) or fraction thereof. All telecommunications rooms or entrance facilities shall be keyed differently and with high security locks, and shall have "Telecommunications" permanently labeled on the door. Telecommunications entrance facilities shall have Balanced Magnetic Switch (BMS) intrusion detection on their doors. The minimum telecommunications room size shall be in accordance with I3A, ANSI/TIA/EIA-569A, and the local telecommunications requirements. A minimum of four 103 mm (4-inch) conduits with MuleTape shall be extended from the telecommunications entrance facility into the underground telecommunications distribution system and tied off at the first maintenance hole or handhole. Those conduits supporting fiber optic cabling will utilize shall be provided with an engineered fabric inner duct and shall not require MuleTape. The number and size of the telecommunications rooms and entrance facilities shall be coordinated with DOIM's Infrastructure Management Group.

9-2.4. Conduit and Cabling: Contractor shall provide minimum 27 mm (1") conduits, complete with telecommunications cables and standard T568A modular jack outlets for telecommunications service. Provide each jack with a cable in conduit routed directly to the telecommunications room. No section of conduit shall contain more than two 90-degree bends between pull points or pull boxes. During cable installation, the rated cable pulling tension shall not be exceeded and cable shall not be stressed such that twisting, stretching, or kinking occurs. Conduit and wiring shall not be run in concrete slabs-on grade. Where runs are below concrete slabs-on-grade and in direct contact with earth or fill, conduit shall be of the coated rigid steel thickwall conduit, coated intermediate metal conduit or Schedule 40 polyvinyl chloride (PVC) type. Elsewhere, conduit where required shall be either of the galvanized thickwall conduit, intermediate metal conduit, or electrical metallic tubing (EMT) type, except that EMT shall not be installed in concrete, exposed to the weather or in other wet locations. Use of flexible plastic or metallic conduit is prohibited.

9-2.5. Pay Telephones: Coordinate pay telephone locations with AAFES.

9-2.6. Secret Internet Protocol Router Network (SIPRNET) Facilities for building 357 only: Provide a vault type secure room on the third floor of building 357, including intrusion detection alarm system and air conditioning, to house classified terminal equipment in accordance with Chapter 7 of AR 380-5. SIPRNET wiring shall consist of fiber optic cable routed through a Protected Distribution System (PDS) (sealed steel conduit, boxes, fittings, etc.) from the secured room to each end user workstation. PDS shall be in accordance with Chapter 4 of AR 380-19 and National Security Telecommunications and Information Systems Security (NSTISSI) No. 7003. Fourteen end user workstation outlets shall be located on the 3rd floor of building 357 as follows: 1 each in the CO and XO offices, 2 each in the S1, S4, and S6 offices, and 3 each in the S2 and S3 offices. Each outlet shall have a heavy duty fiber optic connector in a lockable steel box. Coordinate all exact locations and details with DOIM.

## 9-3. INTERIOR CABLE TELEVISION SYSTEM

9-3.1. Television Outlets: Flush mounted Television (TV) outlets shall be provided in each bedroom, dining room, conference rooms, classrooms, CO Offices, game rooms, and as required by the user. Outlets shall be Type F female plugs. The outlets shall be prewired and pretested. For RG-11 outlets, use 103 mm x 103 mm x 61 mm deep (4" x 4" x 2'/$_4$." deep) outlet box with 16mm ($^1/_2$") minimum rise.

9-3.2. Cabinet: A television terminal cabinet for each building shall be provided and installed in the Telecommunications Room. Coordinate minimum size of cabinet and the type of termination requirements

with Oceanic Cable and Verizon Media Ventures as facilities shall support both vendors simultaneously. The drawing TYPICAL CATV RISER CONDUIT HOMERUN SYSTEM included in with the RFP drawings provides design guidance for Oceanic Cable interior distribution systems. Each terminal cabinet shall be provided with a 21 mm (3/4-inch) termite treated plywood backboard and an insulated #6 AWG copper ground conductor with 900 mm (3 ft) slack in each cabinet. The cable in conduit shall terminate to a common terminal board in the television terminal cabinet or as mutually agreed by Oceanic Cable and Verizon Media Ventures. The cover for the cabinet shall be provided with means for padlocking, and shall be permanently labeled "Television." Final location of the television terminal cabinet shall be coordinated and mutually approved by Oceanic Cable and Verizon Media Ventures. For each building, provide a conduit from the cabinet to the roof of the building as a provision for cable installation from antenna to cabinet by Verizon Media Ventures to preclude Verizon Media Ventures from routing exposed cable. Conduit shall be routed from cabinet concealed in wall up to roofline where it may be routed exposed by penetration of the roof. Coordinate with Verizon Media Ventures and provide appropriate weatherproof transition fitting from conduit to cable.

9-3.3. Conduit and Wiring: For each building, all CATV cable shall be installed in a conduit. For Oceanic Cable and Verizon Media Ventures, 75 ohm, RG-6/U, black, non-messenger, tri-shield, 80% aluminum braid, PVC jacketed coaxial cable shall be used for cable lengths under 200 ft For cable lengths greater than 200 ft, the CATV cable shall be 75 ohm RG-11/U, bonded foil, shielded type which includes an inner layer of laminated tape of aluminum foil bonded to the conductors insulation with a layer of adhesive plus 60% aluminum braid, PVC jacketed coaxial cable. Conduit and wiring shall not be run in concrete slabs-on-grade. Where runs are below concrete slabs-on-grade and in direct contact with earth or fill, conduit shall be of the coated rigid steel thick-wall conduit, coated intermediate metal conduit or Schedule 40 polyvinyl chloride (PVC) type. Elsewhere, conduit shall be either of the galvanized thickwall conduit, intermediate metal conduit, or electrical metallic tubing (EMT) type, except that EMT shall not be installed in concrete, exposed to the weather or in other wet locations. Use of flexible plastic or metal conduits are prohibited. CATV conduit shall be concealed where practicable. Type of cable, type of tap-offs or splitters, and outlet boxes shall be coordinated with Oceanic Cable and Verizon Media Ventures. The following is Oceanic Cable conduit capacity guidelines:

21 mm Conduit ($^3/_4$"C) = 1 to 2 each RG-6 with pullwire.

35 mm Conduit ($1^1/_4$"C) = 1 to 4 each RG-6 with pullwire.

41 mm Conduit ($1^1/_2$"C) = 1 to 5 each RG-6 with pullwire.

9-3.4. All inside wiring shall be identified and tagged with the building number, room, and outlet designation. All inside wiring shall be homerun from the backboard/TV cabinet in the Telecommunication Room to the TV outlet in the room. Refer to RFP drawings for TYPICAL CATV RISER CONDUIT HOMERUN SYSTEM.

9-3.5. The proposer is advised that if the CATV equipment is located in a room accessible to the building occupants, Oceanic requires CATV cabinets. Oceanic will provide CATV cabinets to the proposer and the proposer shall install. If the CATV equipment is to be located in a secured locked room not accessible to the building occupants. Oceanic will place the necessary CATV equipment on the proposer provided backboard and CATV cabinets will not be required in this case. Also note that duplex 103mm (4") square receptacles are required at the CATV cabinet or backboard. The number of receptacles is to be determined by Oceanic upon reviewing the plans. If multiple receptacles are needed, space receptacles 155mm to 208 mm (6" to 8") apart.

9-3.6. Coordination with Oceanic Cable and Verizon Media Ventures: The Contractor is advised that both

Oceanic Cable and Verizon Media Ventures require drawings to be submitted for approval which show at a minimum, locations of outlets and boxes, routes, types and sizes of supporting facilities. The Contractor is also advised that these companies may decline to review drawings which they consider inadequate in detail. The Contractor shall be responsible for coordinating with Oceanic Cable and Verizon Media Ventures to ensure what is proposed meets all their requirements. If any of Oceanic Cable and Verizon Media Ventures requirements are not met, the Contractor shall provide what is required at no cost increase to Oceanic Cable, Verizon Media Ventures, and/or the Government. The Contractor shall provide one week notice before conduit installation begins. Oceanic Cable point of contact is Mr. Dean Yonezawa, (808) 625-8456; Verizon Media Ventures point of contact is Mr. Richard Filanc, (808) 832-6590.

## 9-4. EXTERIOR ELECTRICAL DISTRIBUTION SYSTEM

9-4.1. General: TM 5-811-1, Electrical Power Supply and Distribution provides baseline design criteria, standards, policy and guidance for the design of the electrical power supply and distribution systems. Designs shall be compatible with existing construction provided this does not conflict with criteria, standards and policy in TM 5-811-1.

9-4.2. Codes: Electrical systems and installation requirements shall adhere to the current editions of ANSI C2, National Electrical Safety Code, NFPA 70, National Electric Code, and TM 5-811-1 Electrical Power Supply Distribution. In addition, transformers shall be installed in accordance with the guidance provided in UFC 3-600-01 Fire Protection Engineering for Facilities.

9-4.3. Standards: All equipment, materials and appurtenances provided under this contract shall be suitable for the intended application and shall conform to the current edition of applicable standards of one or more of the following:

National Electrical Manufacturer's Association
American National Standards Institute
Insulated Power Cable Engineers Association
American Society for Testing and Materials
Institute of Electrical and Electronics Engineers.
Underwriters' Laboratories, Inc.

Where no such standards exist for any product provided under this contract, the Contractor shall demonstrate the suitability of the product, for the application intended, to the satisfaction of the Contracting Officer.

9-4.4. Grounding: All exposed non-current carrying metallic parts of electrical equipment, metallic raceway systems, grounding conductors and the neutral conductor of the wiring system shall be grounded, except where specifically indicated otherwise. The ground connection shall be made as required by Article 250 of the NEC. Where ground rods are required, they shall be 21 mm (3/4-inch) by 3000 mm (10-feet) copper-clad steel driven so the top is 155 mm (6 inches) below grade. Rods shall be tested for compliance with NEC ground resistance requirements prior to connection.

9-4.5. Locks: All enclosed electrical equipment shall be equipped with padlocks and furnished with two keys with each lock. All locks shall be master keyed.

9-4.6. Ducts: A minimum of 25% spare ducts (1 duct minimum) shall be provided for each duct line. Duct lines shall not pass beneath any building structures. Similarly, building structures shall not be constructed over any duct line. Primary conductors shall be in concrete encased thin-wall PVC ducts, routed through manholes. Electrical secondary, telecommunication, and cable television cables or

conductors shall be non-encased direct burial ducts, except those ducts installed under roads or concrete driveways or other paved areas exceeding 1524mm (5 feet) in width which shall be encased with a minimum of 78 mm (3 inches) of concrete around each duct. Such encasement shall extend a minimum of 1524 mm (5 feet) beyond the edge of the road or paved area. Provide duct seal for where cable enters ducts and covers on spare duct openings. Field cuts requiring tapers shall be made with proper tools and match factory tapers. After an electrical duct line is completed, a standard flexible mandrel shall be used for cleaning followed by a brush with stiff bristles. Mandrels shall be at least 305 mm (12 inches) along and have diameters 6.5 mm ($^1/_4$ inch) less than the inside diameter of the duct being cleaned. For telecommunication ducts, the size of the mandrel shall be as DOIM specifies. For cable television ducts, a rigid 305 mm (12 inch) mandrel with diameter 6.5 mm ($^1/_4$ inch) less than the inside diameter of conduit shall be used for ducts larger than 53 mm (2 inch). A flexible mandrel with a diameter 16 mm ($^1/_2$ inch) less than the inside diameter of conduit shall be used only for 53 mm (2 inch) ducts. Mandrels shall be provided by Oceanic Cablevision only for final testing of CATV ducts. A coupling recommended by the duct manufacturer shall be used whenever an existing duct is connected to a duct of different material or shape. If burrs or obstructions are encountered in electrical, telecommunication, or cable television ducts, that section of the duct shall be replaced.

9-4.6.1. Concrete Encased Ducts: The encasement shall be a minimum of 78 mm (3 inches) of concrete around each duct. Separators or spacing blocks shall be made of steel, concrete, plastic, or a combination of these materials placed not further apart than 1219 mm (4 feet) on centers. Ducts shall be securely anchored to prevent movement during the placement of concrete and joints shall be staggered at least 155 mm (6 inches) vertically.

9-4.6.2. Nonencased Direct Burial Ducts: Where bottoms of trenches comprise materials other than sand or stone-free earth, 78 mm (3-inch) layers of sand or stone-free earth shall be laid first and compacted to approximate densities of surrounding firm soil before installing ducts in direct-contact tiered fashion. Joints in adjacent tiers of duct shall be vertically staggered at least 155 mm (6 inches). The first 103 mm (4-inch) layer of backfill cover shall be sand or stone-free earth compacted as previously specified. High-tiered duct banks shall use a wooden frame or equivalent form to hold ducts in alignment prior to backfilling. Selected earth at duct banks shall be thoroughly tamped in 103 mm to 155 mm (4- to 6-inch) layers. Burial depth of non-encased ducts for cables with a rating of 600 volts or less and for telephone/television cables shall be a minimum of 610 mm (24 inches). Where nonencased ducts for telephone/television cables share the same trench with ducts for secondary cables with a rating of 600 volts or less, the ducts shall be separated not less than 305 mm (12 inches).

9-4.6.3. Duct Line Markers/Plastic Marking Tapes: Duct line markers shall be provided at the ends of long duct line stub-outs or for other ducts whose locations are indeterminate because of duct curvature or terminations at completely below-grade structures. A 5-mil brightly colored plastic marking tape not less than 155 mm (6 inches) in width and suitably inscribed at not more than 3048 mm (10 feet) an centers with a continuous metallic backing and a corrosion resistant 1-mil metallic foil core to permit easy location of the duct line, shall be placed approximately 305 mm (12 inches) below finished grade levels of such lines.

9-4.7. Conductors: All conductors shall be copper.

9-4.8. Nameplates: Each primary circuit breaker, secondary switchboard or switchgear, and secondary circuit breaker panel shall be identified with a laminated phenolic plastic nameplate. Each primary and secondary feeder shall be identified with a fiber or a non-ferrous metal tag.

9-4.9. Point of Connection: Power shall be extended to Quad C from existing 9-2 kV radial circuits 13 and 18. The electrical point of connection for Quad C for circuit 13 shall be the existing electrical manhole system in Waianea Avenue. The Contractor shall extend electrical ductline and high voltage cables to the

site from that manhole system and terminate those feeder cables on a new high voltage switch F18-2A near the comer of Waianae Avenue and Flagler Road. The point of electrical connection for Quad C for circuit 18 shall be the existing high voltage switch, F18-2 located at the comer of Waianae Avenue and Flagler Road. Please refer to RFP drawings for location. New looped primary feeders circuits shall be extended from existing high voltage switch F18-2 and new primary switch F18-2A to building service transformers for increased reliability. Please refer to RFP drawings for one-line diagram.

9-4.10. Demolition: Remove the existing oil-filled pad mounted transformer feeding the quad and the existing secondary underground distribution system feeding Buildings 355, 356, 357, and 358. Remove the existing underground distribution system cables and raceways (ductlines, manholes, handholes, pullboxes, etc.) within the Quad. Remove the existing underground primary and secondary distribution system cables and raceways (ductlines, manholes, handholes, pullboxes, etc.) from existing primary high voltage switch “F18-2” to the Quad. Provide ductline and cabling to terminate existing high voltage circuits on new high voltage switch F18-2A. Disposal of the oil filled transformer shall be considered incidental to the work. Completely remove unused ductlines and cables.

9-4.11. Outages: The Contractor shall initiate requests for outages no less than 45 calendar days prior to any interruption of service in the existing electrical system. Written requests shall be forwarded to DPW via the contracting Officer. Switching shall be performed by DPW authorized personnel.

9-4.12. System Design: Provide new electrical distribution system as necessary and connect to the existing primary electrical system. The distribution system shall be underground for both primary and secondary conductors. The primary system feeds to the existing primary switch F18-2 and new primary switch F18-2A shall be radial feed and shall be compatible with the system of which it becomes an extension. From existing primary switch F18-2 and new primary switch F18-2A new looped feeders shall be extended to building transformers. Loads on the primary system shall be distributed evenly on the three electrical phases. A multiple grounded neutral conductor shall be routed with the phase conductors. Tag all cables to identify phases. All electrical materials and equipment shall be rated for future operation at 12.47 kV, although the current operation shall be at 7.2 kV line-to-line. The existing nominal system is 7.2 kV, 3-phase, delta with grounding transformers at the Base substation. New distribution systems and extensions of existing system shall provide for proper coordination of protective devices. Short circuit and protection coordination studies shall be part of the design analysis. Refer to TM 5-811-14, Coordinated Power Systems Protection for guidance on protective coordination studies and the selection of protective devices.

9-4.13. Calculations and Diagrams: Complete single line diagrams shall be provided with calculations of available short circuit currents at each transformer and circuit breaker panel; loads on all transformers and feeders; and voltage drops on primary lines and secondary services. Illumination and uniformity calculations for multipurpose courts shall also be provided. Diagrams, calculations, and drawings shall be prepared under the supervision of a United States registered professional electrical engineer. Calculations shall be based on inclusion of cooktop and range hood loads, regardless of whether Additive Alternate Number 2 is awarded or not.

9-4.14. Voltage Drops: The length of secondary distribution service laterals from the building transformers to the building service entrances shall be minimized. The voltage drop from the unit substation to each building's service entrance equipment shall not exceed 2%. The voltage drop from the service entrance equipment to the farthest outlet of lighting, power, or combination of such loads shall not exceed 5%.

9-4.15. Demand Loads: A separate demand load calculation shall be provided for each building. Include catalog cuts of the electrical data for the HVAC equipment that was selected by the mechanical engineer.

9-4.16. Primary Cable: Primary cable shall be ethylene propylene rubber insulated, polyvinyl chloride jacketed, 25% copper tape shield overlap. Conductors shall be copper, sizes larger than no. 8 AWG shall be stranded. Cables shall have a voltage rating of at least 15 kV with 133 percent insulation level. Cable shall be #2, #4/0, or 250 kcmil standard sizes. Deviations from these sizes shall be coordinated and approved by Mr. Roger Grace, DPW, phone no. 655-2942, ext. 1223.

9-4.17. Underground Splices: Splices shall be in self-draining, rodent-resistant manholes with traffic rated covers. Primary cable shall be installed without splice in runs of 152 meters (500 ft) or less. "Y" and "T" splices shall not be used. Instead, circuit cabling shall terminate at high voltage switches and taps shall be extended from dedicated fused switch positions. The high voltage switches shall be exterior type rated 15 kV, 600 amperes minimum with 3-pole gang-operated switches as indicated on RFP drawings. The maximum spacing between manholes shall be 91 meters (300 ft). Primary cables shall be fire-proofed for their entire length within a manhole on an individual cable basis. Fireproofing shall extend at least 25 mm (1 in) into the ducts. Systems shall be listed as a fire protective coating for grouped electrical conductors and shall be suitable for application on the type of medium voltage cables provided. After fully cured, the installation shall be suitable for use where exposed to oil, water, gases, salt water, sewage, and fungus whereby no resulting damage to cable or insulation shall occur.

9-4.18. Secondary Conductors: Secondary underground cables shall conform to UL 854 and shall be copper, type RHH-RHW-USE insulation, cross-linked polyethylene or ethylene-propylene-rubber outer covering. Conductors shall be installed in non-encased PVC thick wall ducts and where practical, located below sidewalks. Ducts located below areas subject to vehicular traffic shall be concrete encased. Secondary cable splices shall be made in splice boxes approved for the purpose and in accordance with the manufacturer's recommendations.

9-4.19. Service Entrance: Only one service entrance per building shall be provided.

9-4.20. Building Transformers: Transformers at buildings shall be liquid-filled pad-mounted type having the ratings and arrangements that are compatible and suitable for proper operation of the facility. Medium voltage ratings of cable terminations shall be 15 KV between phases for 133 percent insulation level. Provide a single primary feeder to the unit from the adjacent pad high voltage switch. Where secondary feeders exit the transformer, provide tags to indicate building numbers. Pad for the unit substation shall be concrete. Provide a concrete oil spill containment berm around the transformer pad. The containment area within the berm shall be of sufficient volume to contain the entire oil content of the transformer plus 10%. In addition, provide such additional design (including consultation with other trades) to ensure that the installation will comply with 40 CFR Part 112 Oil Pollution Prevention and Response; Non-Transportation Related Onshore and Offshore Facilities. Civil design analysis shall confirm that any work necessary to ensure that spills will not migrate into navigable waters is included in the project. The transformer shall have "Danger High Voltage" signs affixed to all four sides of the enclosure. The transformers shall be located as indicated on RFP drawings and shall be accessible to service personnel for maintenance operations. Area surrounding the transformer shall be appropriately treated for AT/FP concerns. When necessary, architectural screening may be used to provide a pleasing appearance but the screening must assure no loss in equipment efficiency. Enclosures shall be corrosion resistant stainless steel construction with a factory applied Norwood Brown color, Federal Color No. 10045.

9-4.20.1. Pad-Mounted Transformers: Pad-mounted transformers shall comply with ANSI C59-12.26. Pad-mounted transformer stations shall be assembled and coordinated by one manufacturer and each transformer station shall be shipped as a complete unit so that field installation requirements are limited to mounting each unit on a concrete pad and connecting it to primary and secondary lines. Stainless steel pins and hinges shall be provided. Barriers shall be provided between high- and low-voltage compartments. High-voltage compartment doors shall be interlocked with low-voltage compartment doors to prevent access

to any high-voltage section unless its associated low-voltage section door has first been opened. Compartments shall be sized to meet the specific dimensional requirements of ANSI C59-12.26. Pentahead locking bolts shall be provided with provisions for a padlock.

9-4.20.1.1. The high-voltage compartment shall be dead-front construction. Primary switching and protective devices shall include loadbreak switching, oil-immersed, current-limiting, bayonet-type fuses, medium-voltage separable loadbreak connectors, integral one-piece bushings and surge arresters. The switch shall be mounted inside transformer tank with switch operating handle located in high-voltage compartment and equipped with metal loop for hook stick operation. Fuses shall be interlocked with switches so that fuses can be removed only when the associated switch is in the "OPEN" position. Adjacent to medium-voltage cable connections, a nameplate or equivalent stenciled inscription shall be provided inscribed "DO NOT OPEN CABLE CONNECTORS UNLESS SWITCH IS OPEN." Surge arresters shall be fully insulated and configured to terminate on the same bushing as the primary cable by means of a loadbreak, feed-through bushing insert.

9-4.20.1.2. Load-Break Switch: Radial-feed oil-immersed type rated at 15 kV, 95 kV BIL, with a continuous current rating and load-break rating of 200 ampere, and a make-and-latch rating of 10,000 rms amperes symmetrical. Locate the switch handle in the high-voltage compartment.

9-4.20.1.3. Transformer Tank Section: Transformers shall comply with IEEE ANSI/IEEE C59-12.00, ANSI C59-12.21, and ANSI C59-12.26 and shall be of the mineral oil-insulated type. Transformers shall be suitable for outdoor use and shall have 2 separate windings per phase. Standard NEMA primary taps shall be provided. Where primary taps are not specified, 4 each $2^1/_2$ percent rated kVA high-voltage taps shall be provided 2 above and 2 below each rated primary voltage (12.47KV and 7.2 KV). Operating handles for primary tap changers for de-energized operation shall be located within high-voltage compartments, externally to transformer tanks. Adjacent to the tap changer operating handle, a nameplate or equivalent stenciled inscription shall be provided and inscribed "DO NOT OPERATE UNDER LOAD." Transformer KVA ratings shall be as required, 65 degrees C temperature rise, 12.47 x 7.2 KV primary, 480Y/277 volt, 3-phase, 4-wire secondary. Transformers shall be sized with a minimum of 25% spare capacity for future growth.

9-4.20.1.4. Low-Voltage Cable Compartments: Neutrals shall be provided with fully-insulated bushings. Clamp type cable terminations, suitable for copper conductors entering from below, shall be provided as necessary.

9-4.20.1.5. Accessories: High-voltage warning signs shall be permanently attached to each side of transformer stations. Voltage warning signs shall comply with IEEE C2. Copper-faced steel or stainless steel ground connection pads shall be provided in both the high- and low-voltage compartments. Dial-type thermometer, liquid-level gauge, and drain valve with built-in sampling device shall be provided for each transformer station. Insulated-bushing-type parking stands shall be provided adjacent to each separable load-break elbow to provide for cable isolation during sectionalizing operations.

9-4.20.2. High Voltage Switches: Metal-enclosed interrupter switchgear consisting of fused, air-insulated interrupters shall be provided for protection of incoming circuits. Metal-enclosed interrupter switchgear shall comply with IEEE ANSI/IEEE C39-30 for load-interrupter switches, NEMA SG-2 for power fuses and shall be of the outdoor no aisle type that meets or exceeds the requirements of the applicable publications listed. Switch construction shall be of the manually-operated, "OPEN-CLOSED" air insulated load interrupter type equipped with a stored energy operator for quick-make quick-break to make operating speeds independent of manual switch operations. Suitable bus or lug connections shall be provided to mount slip-on medium voltage cable terminations for cable entering via conduit from below. Fuses shall be of the current limiting type. Fuses shall be sized approximately 150 percent of the transformer full load current rating. Three sets

of spare fuses (for transformer operation at 7.2 KV) shall be provided to DPW. In addition, two sets of fuses sized for transformer operation at 12.47 KV shall be provided to DPW. Identify the following switch ratings in the design and specifications:

a. nominal voltage,

b. rated maximum voltage,

c. maximum symmetrical interrupting capacity,

d. maximum asymmetrical interrupting capacity,

e. 3-second short time current carrying capacity,

f. rated continuous current, and

g. BIL.

9-4.21. Area Lighting: Area lighting shall be as indicated on RFP drawings. Area lighting shall be provided with HPS lights. Illumination levels and uniformity ratios shall be in accordance with the IES Lighting Handbook. Luminaries shall be actuated by photoelectric control, one photocell per circuit, and supplied from multiple circuits. Light fixtures shall have vandal-resistant polycarbonate type lens and shall be mounted on seamless aluminum poles. Lights, poles, and anchoring shall be designed to withstand a wind loading of 100 MPH.

9-4.22. Modifications to Existing Parking Lot Lighting: Parking lots adjacent to Building 358 and across Flagler Road from Building 356 will be modified for AT/FP clearance requirements by the removal of parking spaces and relocation of vehicle movement areas. Modify the existing lighting for those parking lots by removing existing lighting (pole lights, raceways, etc.) as necessary to accommodate new work, removing unnecessary lighting (to include associated raceways, cables, etc.) and providing new lighting, to match existing, to properly illuminate the modified parking lots. New raceways, cables, recircuiting existing lighting to remain, etc., shall be considered incidental to this work. Lighting levels and uniformity ratios shall be in accordance with the IES Lighting Handbook. Luminaries shall be actuated by photoelectric control, one photocell per circuit, and supplied from multiple circuits. Light fixtures shall have vandal resistant polycarbonate type lens and shall be mounted on seamless aluminum poles. Lights, poles, and anchoring shall be designed to withstand a wind loading of 100 MPH. Connect parking lot lighting systems to the new electrical distribution system for Quad C. Refer to RFP drawings for location.

9-4.23. ATFP Access Controls: Provide general lighting, electrical power, and signals for new ATFP access controls. Control equipment to be located in Quad C. Access control equipment and lighting shall be connected to the new electrical distribution system for Quad C. Refer to RFP drawings for locations.

9-4.24. Gear Wash/Recreational Facility: Provide general lighting and electrical power for the facility. Lighting shall be permissive switch controlled.

9-4.25. Multipurpose Court Lighting: Illumination levels and uniformity ratios shall be in accordance with IES Lighting Handbook for recreational (outdoor) classification. Lamps shall be metal halide for better color rendition. Luminaries shall be actuated by egg timer type (or parking meter type) time switches and supplied from a three-phase circuit. Light fixtures shall have vandal-resistant polycarbonate type lens and shall be mounted on seamless aluminum poles. Lights, poles, and anchoring shall be designed to withstand a wind loading of 100 MPH.

9-4.26. Site Lighting: Various signs about the site are lit. Various landscaping features about the site are lit. Branch circuiting to those existing lights shall be demolished with the existing electrical system. Provide new branch wiring to existing site lighting from the new Quad C electrical system.

9-4.27. Metering: Metering shall be provided for each building having a connected load of 250 KVA or more to permit check metering. Enclosures shall be corrosion resistant stainless steel construction with a factory applied Norwood Brown color, Federal Color No. 10045. Metering shall be connected to the Quad C DDC system for energy usage monitoring.

9-4.28. Operation and Maintenance (0 & M) Manuals: Operation and Maintenance manuals shall be provided for the secondary unit substation. Manuals shall instructions for assembly, installation, operation and maintenance, and spare parts data which provides supplier name, current cost, catalog order number, and a recommended list of spare parts to be stocked. Manuals shall also include data outlining detailed procedures for system startup and operation, and a troubleshooting guide which lists possible operational problems and corrective action to be taken. A brief description of all equipment, basic operating features, and routine maintenance requirements shall be included. Documents shall be bound in a binder marked or identified on the spine and front cover. A table of contents page shall be included and marked with pertinent contract information and contents of the manual. Tabs shall be provided to separate different types of documents, such as catalog ordering information, drawings, instructions, and spare parts data. Index sheets shall be provided for each section of the manual when warranted by the quantity of documents included under separate tabs or dividers. Six copies of these 0 & M manuals shall be submitted within 7 calendar days following the completion of tests.

**9-5 TELECOMMUNICATIONS OUTSIDE PLANT**

9-5.1. Point of Connection:

9-5.1.1. Official (Government) Telephone Service: Existing communications manhole (CMH) C3, located near the intersection of Foote and Meigs Avenues. Please refer to RFP drawings for location.

9-5.1.2. Commercial Telephone Service: Existing PBX in Building 355.

9-5.1.3. Local Area Network (LAN) Service: Existing communications manhole (CMH) C3, located near the intersection of Foote and Meigs Avenues, and existing communications manhole (CMH) C11, located in Waianea Avenues between Sudut Street and Generals Loop, near Building 212. Please refer to RFP drawings for location.

9-5.2. Infrastructure:

9-5.2.1. Provide 9-way communications ductline and manhole system from existing communications manhole (CMH) C3, located near the intersection of Foote and Meigs Avenues to the Quad C communications distribution ductline system.

9-5.2.2. Provide 4-way communications ductline and manhole system from existing communications manhole (CMH) C11, located in Waianae Avenue to the Quad C communications distribution ductline system.

9-5.2.3. Provide communications distribution ductline system within Quad C consisting of 9-way ductline and manholes.

9-5.2.4. Provide 4-way communications ductline from the Quad C communications distribution ductline system to the main communications room for each building.

9-5.2.5. Provide communications ductline from the existing PBX in Building 355 to the Quad C communications distribution ductline system. Coordinate duct requirements with DOIM.

9-5.2.6. Exterior duct requirements for routing building systems signals (fire alarm, DDC, etc.) are in addition to infrastructure duct requirements listed above.

9-5.3. The telecommunications cable and duct distribution shall be underground within the project site. The telecommunications distribution system shall be physically separated from the electrical power distribution system in accordance with the NESC. Exterior telecommunication cables shall be furnished and installed by others. All existing unused underground telecommunications ductlines, manholes, handholes, and cables shall be removed. After award of the contract, the Contractor shall coordinate with DOIM, through Mr. Edmund Takeya at 438-0189, Infrastructure management Group and Mr. Marion F, Robinson, Jr. at 438-8071 or Mr. James W. Arrowood, 438-8070 to ensure all proposals, designs, removal work, and installation requirements meets Federal and local telecommunication standards at the sole expense of the contractor. In addition, the Contractor shall coordinate with Mr. William Aiu, AT&T HITS, to ensure existing telecommunications cables are properly attended to prior to starting building renovation. This coordination shall be required again toward the end of the project to ensure telecommunications services are available at facility turn over.

9-5.4. The Contractor shall be responsible for coordinating with DOIM to ensure that what is proposed meets Federal and local PUC requirements. If any requirements are not met, the Contractor shall provide what is required at no increase to the Contract price or time of performance.

9-5.5. The Contractor is cautioned that DOIM requires drawings to be submitted which show, at a minimum, locations, routes, types, and sizes of the supporting facilities for the telecommunications system. The Contractor is also advised that DOIM and the commercial vendor may decline to review drawings which it considers inadequate in detail.

9-5.6. ANSI/TIA/EIA 569A Commercial Building Standard for Telecommunications Pathways and Spaces shall be used for maintenance hole, handhole and conduit design. The underground telecommunication system design must also conform to HITS outside plant practices. Federal standards or local practices shall be the minimum requirement. Commercial vendor products may be used, if they meet or exceed the Federal Standards.

9-5.7. In addition to the requirements stated above, the following shall be provided as a minimum:

9-5.7.1. Details of conduit termination to telecommunications lines on an existing pole or maintenance hole at the point of connection (aerial to underground or underground to underground).

9-5.7.2. Sizes, quantities, type, and locations of handholes, maintenance holes and ducts with MuleTape or engineered fabric inner duct.

9-5.7.3. Termite treated, fire retardant, 21 mm (3/4 inch) void-free plywood backboards and insulated copper, #6 AWG, ground conductors shall be provided in each telecommunications room. Plywoods shall be painted with two coats of white colored, fire retardant paint on all sides and shall cover two walls. The ground conductor shall be connected to an ANSI/TIA/EIA compliant busbar in each room. Telecommunications grounding shall meet TIA/EIA-607A.

9-5.7.4. Minimum outside plant duct size shall be 103 mm (4 inches). Conduits shall be PVC, Schedule 40, encased in 76 mm (3 inches) of 235 kPa (2500 psi) concrete. Burial depth shall be, at a minimum, 600 mm (24 inches) measured from the top of the duct. At least one spare 103 mm (4 inches) conduit shall be provided for each distribution pathway. A minimum of two spare 103 mm (4 inches) conduits shall be provided for each trunking pathway. All 103 mm (4 inches) conduits shall have MuleTape installed except for those conduits supporting fiber optic cabling. These conduits shall utilize engineered fabric inner ducts. The number and thread color shall be coordinated with DOIM's Infrastructure Management Group, Fiber Optic Manager, (808) 438-8056.

9-5.7.5. Maintenance holes shall be per DOIM standards. Submit maintenance hole shop drawings to DOIM for approval prior to fabrication. Maintenance hole sketches for general guidance are in Attachment 24. Sketches are intended to provide rough hole sizes for guidance. DOIM periodically revises its standards. The Contractor shall be responsible to obtain the latest copy of DOIM standards and for ensuring that his design meets those standards. The Contractor shall design the maintenance holes, including structural design of the holes to meet ASHTO H20 loading. The Contractor shall submit structural calculations substantiating his design. Interior clear dimensions shall be maintained and shall be considered minimal. Maintenance holes shall be equipped with two pulling-in iron and cable racks with arms. Maximum spacing for maintenance holes shall be 152 m (500 feet). Maximum spacing between handholes and between handholes and buildings shall be 45.5 m (150 feet). All maintenance holes, and handholes shall be provided with 2400 mm (8 feet) ground rods. All handholes shall be located in sidewalks and all maintenance holes shall be located in roadways.

9-5.7.6. All inside and outside cabling shall be identified and tagged at the terminal, outlet, and at each termination and maintenance hole in accordance with ANSI/TIA/EIA 606A, and local numbering conventions, with the following minimum information:

a) building and floor number,

b) room and outlet designation and

c) cable pair, pair count, AWG.

9-5.7.7. The Contractor is required to follow Federal, Army and Hawaii PUC technical guidance as part of this project. Any deviations shall be coordinated through the DOIM's subject matter experts who will coordinate with local service providers. Point of contact at DOW is Mr. Edmund Takeya at 438-0189. Subject matter experts in the Infrastructure Management Group are Mr. Marion F. Robinson. Jr. at 438-8071 or Mr. James W. Arrowood at 438-8070.

## 9-6. EXTERIOR CABLE TELEVISION SYSTEM

9-6.1. Point of connection: Existing communications manhole (CMH) C3, located near the intersection of Foote and Meigs Avenues. Please refer to RFP drawings for location. CATV cables shall be included in the 9-way ductline required from existing communications manhole (CMH) C3 to Quad C described above. Additional requirements to support the CATV outside plant will be coordinated with DPW, DOIM, and the Directorate of Contracting. Depending on existing contracts and agreements, additional CATV outside plant requirements may or may not be included in the project.

9-6.2. Space provisions (empty conduits) shall be made, for installation of an underground television cable system. Cables will be furnished and installed by others. Mule tape shall be provided in all empty conduits to facilitate pulling of cables by others. The underground cable television distribution system shall be physically separated from the electrical distribution system in accordance with NESC (ANSI C2). All design

and installation requirements shall be coordinated with Oceanic Cable at the sole expense of the Contractor. The cable television system shall reside in the official telecommunications pathways and spaces except where power is required. Pathways and spaces include maintenance holes, handholes, conduits, and telecommunication rooms.

9-6.3. The Contractor is cautioned that Oceanic Cable requires drawings to be submitted which show, at a minimum locations, routes, types, and sizes of the supporting facilities for the television system. The Contractor is also advised that Oceanic Cable may decline to review drawings which it considers inadequate in detail.

9-6.4. The Contractor is advised that Oceanic Cable has standard drawings for the pull boxes, handholes and ductlines. The Contractor may contact Oceanic Cable regarding their standard specifications. The point of contact is Mr. Dean Yonezawa, Oceanic Cable, phone number (808) 625-8456.

9-6.5. The Contractor shall coordinate with Oceanic Cable to ensure what is proposed meets all of that company's requirements. If any requirements are not met, the Contractor shall provide what is required at no increase to the Contract price or time of performance.

9-6.6. The Contractor must provide 1-week notice before conduit installation begins. Point of contact shall be Mr. Moki Place, Oceanic Cable, phone number (808) 625-8378.

9-6.7. In addition to the requirements stated above, the following shall be provided for Oceanic Cable's approval.

9-6.7.1. Details of conduit termination to Oceanic Cable lines on an existing pole or manhole at the point of connection (aerial to underground or underground to underground).

9-6.7.2. Sizes, quantities, type, and locations of pullboxes, handholes, manholes, and ducts with MuleTape. May include power supply with secondary as needed.

9-6.7.3. Sizes and types of terminal cabinets required at each building. A termite treated backboard and insulated copper, #6 AWG, ground conductor shall be provided in each cabinet. The ground conductor, with 900mm (3-feet) excess length in each cabinet, shall be connected to the building grounding system. Cabinet enclosures shall be rated NEMA 3R.

9-6.7.4. Minimum duct size for distribution lines shall be 103 mm (4 inches). Ducts shall be PVC schedule 40 when concrete encased and when direct buried. If practicable, locate below the sidewalks. Burial depth shall be 600 mm (24 inches). MuleTape shall be provided in each duct. See other paragraphs for burial depth and concrete encasement requirements.

9-6.7.5. Maximum spacing of pullboxes/handholes shall be 108m (350 feet). All handholes/pullboxes shall be located in sidewalks and/or planter strips. Maximum distance for CATV service drop cables shall not exceed 45.5m (150 feet) from the Building's terminal cabinet to the pullbox containing the main CATV distribution cables. Exceptions to this requirement will require approval from Oceanic Cable.

9-6.7.6. Minimum duct size to the building shall be 53 mm (2 inches). Ducts shall be PVC Schedule 40 when concrete encased and when direct buried. Mule tape shall be provided in each empty duct.

9-6.7.7. Where applicable, sizes and locations of power supply pullbox shall be as recommended by Oceanic Cable. Power supply, box, pad, and pedestal shall be provided by Oceanic Cable.

9-6.8. Pullboxes: A 600 mm (24 inch) by 1200 mm (48 inch) CATV pullboxes shall be used for this project if necessary. Pullbox shall be in accordance with Oceanic Cable standards. Pullboxes shall be precast concrete with polymer non-skid surfaced two piece covers inscribed with "TV". A minimum of two precast concrete pullbox sections shall be required at each pullbox.

9-6.9. Terminal Cabinets. Terminal cabinets shall be provided. Incoming ducts to the building main terminal cabinet shall be 53 mm (2-inch) PVC schedule 40 when concrete encased and when direct buried.

**9-7. SPECIAL UTILITIES AND SUPPLEMENTARY CONSTRUCTION**: Required connections to the existing utilities shall be completed by the Contractor at no increase to the Contract price even if they are beyond the indicated project boundaries. The Contractor shall coordinate the installation of telephone and cable TV feeders from the points of connection to the buildings with DOIM, Oceanic Cable, Verizon and Verizon Media Ventures, respectively.

# CHAPTER 10

# HEATING, VENTILATING, AND AIR CONDITIONING

## 10-1 GENERAL REQUIREMENTS

10-1.1 **Heating, Ventilating and Air Conditioning (HVAC) scope**. The HVAC requirements for the project, as indicated in this Chapter, are generally contained within this chapter unless otherwise noted. Other HVAC scope indicated by other Chapters and the Attached Concept Design Documents (Drawings, HVAC Calculations), which are to be used for the design of this project, are subject to requirements in this section. All requirements within this Chapter shall take precedence over any conflicting requirement in other Chapters, Attachment Concept Design Documents or any other criteria and shall be brought to the attention of the Contracting Officer for resolution in writing. All definitions and acronyms used in this section are intended to be used for this section only unless otherwise noted. Catalog cuts in the attachments are not intended to be exact equipment provided. Equipment shall be similar to catalog cuts and based on design developed after award.

10-1.2 **Design Standards and Codes.** HVAC systems shall be designed and installed in accordance with Title 10 CFR Part 434, current versions of the International Mechanical Code and the references listed below.

**10-2 APPENDIX AND RECOMMENDATIONS.** HVAC design criteria in general that are stated in any reference, which are either in the appendix, stated as a recommendation or addressed with a "should" shall be considered to be mandatory requirements and will be incorporated into the design.

**10-3 DESIGN CALCULATIONS**

10-3.1 **Heat loss and heat gain calculations.** Heating and cooling loads shall be in accordance with the current edition of the ASHRAE Handbook of Fundamentals. Computer-generated load calculations shall be provided and shall include complete input data and output summaries. Equipment shall be sized to meet the total, sensible and latent loads determined by the computer calculation. Equipment may be oversized to no more than 15 percent of the computer generated load. For cooling load calculations, the design shall be based on the 2.5 percent weather data in TM 5-785. In addition to calculating the cooling load at maximum design temperature, cooling load calculations or thermal simulations should also be made for low load conditions to determine the greatest dehumidification load that may be encountered. The design shall maintain relative humidity in the spaces to between 35% and 65% relative humidity except as otherwise notated. Sufficient cooling shall be provided to maintain the following space temperatures.

| Type of Space* | Indoor Space Temperature (°F) | Indoor Space Temperature (°C) | Remarks |
|---|---|---|---|
| Offices, Administration, Waiting Rooms | 75 | 24 | |
| Telecom, Comm Storage, Electronic Switch Rooms | 72 | 22 | |
| Arms Vaults | 75 | 24 | Maintain relative humidity between 35% and 55% |
| Equipment Maintenance Rooms | 75 | 24 | |
| Classrooms | 75 | 24 | |
| Specialty Storage | 75 | 24 | |
| Billeting, Game Rooms | 75 | 24 | |
| Dining Room | 75 | 24 | |
| Kitchen, Dishwashing | 85 | 29 | |
| Other Air Conditioned Rooms | 75 | 24 | |
| Restrooms, Toilets, Laundry Rooms, Janitor Rooms | | | Served by transfer air, 100% exhausted to outside |
| General Storage | | | Served by transfer air, 100% exhausted to outside |

*Note: See attached calculations and drawings for rooms to be air conditioned.

10-3.1.1 **Load design criteria.** The internal loads shown in the Attached Concept Design Documents (Drawings, HVAC Calculations) shall be used in the calculations in the design after award. Calculations submitted shall include, but not be limited to, input data used in determining the computer-generated load calculations.

10-3.1.2 **Schedule.** The heating and air conditioning calculations shown in the Attached Concept

Design Documents (Drawings, HVAC Calculations) shall be used to determine zoning characteristics of the air conditioning systems.

10-3.2 **Ventilation air.** Calculations determining minimum outside ventilation air and exhaust shall be provided. Ventilation air shall be provided to each building space and shall be in accordance with the current edition of ASHRAE 62. In addition, outside air quantities shall be sufficient to maintain positive or negative pressure relative to adjacent spaces.

10-3.3 **Piping calculations.** Calculations shall be provided for pressure drop calculations for all piping systems. Water velocity through pipes shall be limited to 2440 mm/sec (8 ft/sec) unless a lower velocity is recommend by the HVAC equipment manufacturer(s). An isometric diagram of the water system shall be included in the design after award submittal.

10-3.4 **Duct calculations.** Calculations shall be provided for sizing all duct systems, including static pressure drop calculations for all fans. Air velocity through ductwork shall be limited to 7.62 m/s (1500 ft/min). Ductwork layout drawings shall be provided to indicate all fittings and devices to substantiate calculations.

10-3.5 **Outside air.** Where the outside air requirements are a significant part of the cooling load, the use of desiccant cooling, enthalpy wheels and similar devices for conditioning the outside air and transferring latent and sensible heat to the exhaust air shall be considered. Units shall be appropriately sized to eliminate or minimize the latent load in the conditioned space to save significant energy and increase the comfort level.

**10-4 MECHANICAL SYSTEMS**

10-4.1 **Air conditioning systems.** The buildings shall be provided with central air conditioning systems. Systems shall be designed, installed, balanced and adjusted to distribute cooling to all occupied spaces, server, telecommunication and computer rooms. Air conditioning systems shall have ducted supply and return air distribution as indicated.

10-4.2 **Exhaust systems.** Provide individual ceiling mounted fans for toilet exhausts. Provide individual ceiling mounted fans for general exhaust systems. Provide individual thermostatically controlled exhaust fans for laundry rooms, mechanical/electrical rooms and other spaces where ventilation only is required. Provide exhaust hoods individually and directly ducted to the exterior for all residential type ranges and cooking surfaces.

10-4.3 **Features.** Equipment provided shall have the features described below. Mechanical equipment shall be located and be of minimum capacities indicated in the Attached Concept Design Documents (Drawings, HVAC Calculations).

10-4.4 **Factory authorized supplier.** The equipment shall be furnished by a factory authorized supplier within a distance of 500 miles of the installation site.

**10-5 CENTRAL COOLING EQUIPMENT.** Minimum equipment efficiencies shall be in accordance with DOE Buying Energy Efficient Products Recommendations (refer to www.eren.doe.gov/femp/procurement for recommended efficiencies) or Energy Star. Design shall be in accordance with TI 800-01 including, but not limited to, paragraphs referring to providing multiple chillers for systems with cooling capacities over 350 kW (100 tons). Central cooling equipment shall be provided in locations indicated and with minimum capacities as indicated.

10-5.1 **Chiller.**

1. Chiller shall include the following quality characteristics.

a. Chiller performance shall be rated in accordance with ARI Standard 550.

b. Equipment and installation shall be in compliance with ANSI/ASHRAE 15.

c. Cooler and condenser shall include ASME “U” stamp and nameplate certifying compliance with ASME Section VIII, Division 1 code for unfired pressure vessels.

d. Chiller shall be manufactured in a facility that has been registered by UL to the ISO 9000 Series Standards for quality.

e. Chiller shall be designated and constructed to meet UL requirements and shall have labels appropriately affixed.

f. Each compressor assembly shall undergo a mechanical run-in test to check proper operation of components and to verify that vibration levels, oil pressures/temperatures and efficiencies are within acceptable limits. Each compressor assembly shall be pneumatically proof tested at 2792 kPa (405 psig) and leak tested with a tracer gas at 1151 kPa (225 psig).

g. Both cooler and condenser shall be proof tested at 2586 kPa (375 psig) on the refrigerant side and leak tested with a refrigerant gas at 2086 kPa (300 psig). The water side of each heat exchanger shall be hydrostatically tested at 1.5 times rated working pressure.

h. The entire chiller assembly shall be leak tested with a refrigerant tracer gas.

2. Compressor variable frequency drive (VFD) motor and controls shall have the following characteristics.

a. Input power shall be as indicated. Voltage may vary by +/- 10%. Motor base frequency shall be 60 +/- 2 Hz. Motor design speed shall be 3550 RPM. Output frequency range shall be between 65% and 100% motor speed.

b. The VFD shall be capable of 100% full load continuous output.

c. Minimum drive efficiency shall be 97% at motor base speed and rated torque. Losses shall include all control power and cooling system losses associated with the drive. Displacement power factor shall be 95% throughout the entire operating speed range as measured at the drive input terminals.

d. Fixed utility power (voltage and frequency) shall be converted to a variable voltage and frequency. The drive shall consist of three basic power sections. The first, a converter section consisting of a full-wave fixed diode bridge rectifier, shall convert incoming fixed voltage/frequency to a fixed DC voltage. The second section, a DC Link, shall filter and smooth the converted DC voltage. The third section, a transistorized inverter and control regulator, shall convert the fixed DC voltage to a sinusoidal wave, pulse width modulated (PWM) waveform.

e. The drive shall employ PWM modulation to minimize motor heating. An asynchronous carrier shall be employed to eliminate torque pulsations. Switching frequency shall be adjustable at 2, 4 or 8 kHz.

f. A DC Link reactor shall be included for each rating to minimize harmonic distortion and

maximize input power factor.

g. The drive shall be housed in a unit-mounted cabinet, formed, assembled, front accessible and braced, general-purpose indoor enclosure rated NEMA 1.

h. Enclosures shall be single bay, sheet steel with hinged access doors and a lockable, through-the-door handle operator mechanism.

i. Construction safety features shall include:

- Provisions to padlock main disconnect handle in the “OFF” position.

- Mechanical interlock to prevent opening cabinet door with disconnect in the “ON” position or moving disconnect to the “ON” position while the door is open.

- Warning signs on terminals that are energized with the power disconnect “OFF”.

j. Chiller oil pump branch fused disconnect shall be provided.

k. The operator interface shall be at the main chiller control panel. The panel shall consist of a door mounted back-lit LCD display, capable of controlling the drive and chiller settings for proper drive operation. The drive parameters will be preset in the factory using the keypad on the door of the drive.

3. Cooler and Condenser.

a. Cooler and condenser shall be of the shell and tube type construction, each in separate shells. Units shall be fabricated with high-performance tubing, steel shell and tube sheets. Waterboxes shall be nozzle-in-head type with nozzles either flanged or with grooves to allow for use of grooved couplings.

b. Tubing shall be copper, high-efficiency type, with integral internal and external enhancement.

c. Cooler and condenser shall display ASME nameplates that show pressure and temperature data and the “U” stamp for ASME Section VIII, Division 1.

d. Tubes shall be individually replaceable from either end of the heat exchanger without affecting the strength and durability of the tube sheet and without causing leakage in adjacent tubes.

4. Refrigerant Flow Control. Liquid refrigerant form the condenser shall be metered using a direct acting, float-type metering valve to maintain the proper liquid level of refrigerant in the heat exchangers under both full and part load operating conditions. By maintaining a liquid seal at the flow valve, bypassed hot has from the condenser to the cooler is eliminated. The float valve chamber shall have a bolted access cover to allow field inspection, and the float valve be field serviceable. Fixed orifices shall not be acceptable.

5. Controls. The chiller shall be provided with a factory installed and wired mircoprocessor control system with individually replaceable modular component construction. Components includes shall be the main processor/input-output module, power supply, starter management module, relay board, temperature and pressure sensors and all necessary auxiliary devices required for proper operation.

6. Control functions. The chiller controls shall be configurable for manual or automatic start-up and shutdown (scheduling). The controls shall provide the capability to view and change the leaving chilled water setpoint, entering chilled water setpoint and demand limit setpoint.

7. Safeties. Unit shall automatically shutdown when any of the following conditions occurs.

   a. Motor overcurrent
   b. Over voltage
   c. Under voltage
   d. Single cycle dropout
   e. Low evaporator refrigerant temperature
   f. High condenser pressure
   g. High motor temperature
   h. High compressor discharge temperature
   i. Low oil pressure
   j. Low oil level
   k. Loss of cooler water flow
   l. Loss of condenser water flow
   m. Start fault
   n. High oil filter differential pressure
   o. Out-of-range sensors
   p. Excessive starter transition time
   q. Motor current signal loss
   r. Motor power supply phase reversal
   s. Temperature sensor and transducer faults
   t. Single cycle dropout
   u. Motor running in reverse
   v. Motor running without control authorization

8. Insulation. Chilled water piping and cooler waterboxes shall be insulated.

9. Vibration isolation. Chiller shall be mounted on factory provided spring isolators.

10. Motors. Three phase motors of 1 HP or larger shall be premium efficiency electric motors. Motors shall have TEFC type enclosures.

10-5.1.1 **Hermetic screw liquid chiller.** Microprocessor-controlled liquid chiller using a twin rotor, direct drive, semi-hermetic, screw compressor.

1. Compressor.

   a. One positive displacement field-serviceable helical, rotary, semi-hermetic, twin rotor-type compressor. Compressor section joints shall be sealed using O-rings instead of gaskets to reduce the occurrence of refrigerant leakage.

   b. The compressor casing shall be cast-iron with design pressure rating of 2068 kPa (300 psig) or higher.

   c. Bearings shall be pressure lubricated rolling element type, AFBMA Class 5 or superior.

   d. Discharge oil separation shall be accomplished external to the compressor casing. Oil separator and return system shall be designed to ensure that oil is adequately returned to the compressor and does not collect in the heat exchangers.

e. Compressor safeties shall include high compressor discharge temperature, high motor winding temperature, low oil pressure, reverse rotation and high discharge pressure.

f. Compressor shall be equipped with internal pressure relief to protect against overpressure. For compressors not equipped with internal pressure relief, the high side of the chiller shall be protected with an external relief valve capable of passing the full load flow produced by the compressor.

g. Compressor shall be provided with a lubrication system to deliver oil under pressure to the bearings.

h. Compressor shall be fully field serviceable. Compressors which must be removed and returned to the factory for service shall not be acceptable.

2. Capacity control. Capacity control shall be by means for hydraulically operated slide valve under the compressor rotors. Load modulation shall be from 100% to 10% of compressor full load under normal ARI conditions without the use of hot gas bypass. The slide valve shall be precisely positioned by a proportional-integral-derivative (PID) control algorithm to ensure precise control of desired chilled water temperature without hunting or overshooting the setpoint.

10-5.1.2 **Hermetic centrifugal liquid chiller.** Microprocessor-controlled liquid chiller using a single stage, semi-hermetic, centrifugal compressor.

1. Compressor.

a. Impeller shall be open type with machined shroud contours.

b. Compressor, motor and transmission shall be hermetically sealed into a common assembly and arranged for easy field servicing. Internal compressor parts shall be accessible for servicing without removing the compressor base from the chiller. Connections to the compressor casing shall use O-rings instead of gaskets to reduce the occurrence of leakage. Connections to the compressor shall be flanged or bolted for easy disassembly.

c. Journal bearings shall be of the steel-backed, Babbitt lined type or roller element bearings.

d. Transmission shall be single ratio, single helical, parallel shaft speed increaser. Gears shall conform to AGMA Standards, Quality II.

e. Compressor shall be provided with a lubrication system to deliver oil under pressure to the bearings.

f. Compressor shall be fully field serviceable. Compressors which must be removed and returned to the factory for service shall not be acceptable.

2. Capacity control. Capacity control shall be by means of variable inlet guide vanes located at the impeller inlet. Load modulation shall be from 100% to 15% of compressor full load under normal ARI conditions without the use of hot gas bypass. The guide vanes are precisely positioned by a PID (proportional-integral-derivative) control algorithm to ensure precise control of desired chilled water temperature without hunting or overshooting the setpoint.

10-5.2 **Cooling Towers.** Towers shall be the induced mechanical draft type and shall be certified by the Cooling Tower Institute (CTI). Towers shall be factory fabricated and assembled, shipped to the job site in separate cells or modules and shall be provided with all appropriate manufacturer's hardware for assembly in the field. Towers shall be assembled and adjusted at the job site by a factory representative.

1. Framework, Casing, Supports and Foundation.

   a. Towers shall be designed and constructed to withstand a wind pressure of not less than indicated in the IBC. Framework, structural supports and equipment supports shall be Type 304 stainless steel. Casing shall be constructed of Type 304 stainless steel.

   b. Foundations shall meet the requirements of the cooling tower manufacturer and be seismically designed in accordance with the IBC. Foundation design shall be based on the load calculations and the soil bearing value indicated. Foundation calculations shall be submitted with the equipment drawings.

2. Stairways and Ladders. Provide stairs, 60 degree ship ladders or straight-rung ladders of standard design, starting at ground level or at roof level, if the roof is accessible, and extending as high as required to gain access to fan decks and water distribution systems. Stairways and ladders shall be hot-dipped, zinc-coated steel. Ladders higher than 3.66 meters (12 feet) shall have a safety cage.

3. Handrailings. Steel handrailings shall be not less than 1067 mm (42 inches) high around the exterior of each working surface that is 3.66 meters (12 feet) or more above the ground, roof, or other supporting construction. Railings shall not be smaller than 32 mm (1-1/4 inch) zinc-coated steel pipe with standard zinc-coated steel railing.

4. Access doors. Each tower shall be provided with access doors at grade or roof level, if the roof is accessible, to provide entry to the interior for service maintenance without removal of the fill. Doors shall be provided on each endwall of each cooling tower cell. Frame and brace access doors to prevent damage when opening and closing. Doors shall be located adjacent to float controls.

5. Louvers. Air inlets for each cooling tower shall be provided with individually removable louvers arranged to prevent the escape of water. Louvers shall be Type 304 stainless steel. Materials provided for casings and louvers shall be compatible; one material shall not produce stains upon the other. Air intakes shall be provided with 25 mm (1 inch) zinc-coated steel mesh.

6. Fan deck and cylinder. Each fan shall be mounted in a fan cylinder (or stack) to elevate the fan discharge air. Total extension height shall not exceed the fan diameter. Each fan cylinder shall be provided with a zinc-coated steel 2.75 mm (12 gauge) wire mesh securely mounted to the top of the cylinder in accordance with manufacturer's recommendations. Fan decks shall be designed to withstand a live load of not less than 1.9 kPa (40 psf) in addition to the concentrated or distributed loads of equipment mounted on the fan decks. Fan deck and cylinders shall be constructed of Type 304 stainless steel and be compatible with the entire tower construction.

7. Fans shall be propeller type, constructed of Type 304 stainless steel. Fans shall be variable speed or 2-speed. Variable speed drives shall be as specified in paragraph 10.6 Air Distribution. Propeller type shall have a maximum tip speed of 55 m/s (11,000 fpm). Fan blade assembly shall be both statically and dynamically balanced after assembly of the

cooling tower. Fan hub shall be constructed of stainless steel. Complete fan assembly (fan and mounting) shall be designed to give maximum fan efficiency and long life when handling saturated air at high velocities. Each cooling tower fan shall be provided with a ball and pedestal type vibration limit switch which shall stop the corresponding fan motor in the event of sensing excessive fan vibration.

8. Speed reducer gears and drive shaft. Speed reducer gears shall be rated in accordance with CTI Std-111. Gear reducers shall be of the spiral bevel, single reduction, spiral or helical, double reduction type. Reducer shall be mounted in accordance with manufacturer's recommendations. Each reducer shall be provided with an oil level cutoff switch interlocked to the fan motor. Each reducer shall be provided with an oil level sight glass, fill, drain and vent lines located in a readily accessible position. Drive shafts shall be the full floating type with flexible couplings at both ends and have a service factor of 1.0 or greater. Drive shafts shall be of stainless steel, fitted each end with flexible coupling (stainless steel plate type). Each drive shaft shall be provided with a galvanized steel guard, to prevent damage to surrounding equipment in case of shaft failure. Provision shall be made for lubrication of all bearings. Bearings shall be accessible to the extent that each bearing can be lubricated without dismantling the fan.

9. Fan motors. Each motor shall be single speed, totally enclosed, insulation Class B, NEMA Design B, continuous-rated type which conforms to NEMA MG 1. Fan motors shall have totally enclosed enclosures and be located outside the discharge airstream. Motors shall be mounted according to manufacturer's recommendations. Motors of 1 HP or greater shall be premium efficiency. Motors shall have TEFC type enclosures.

10. Hardware. Bolts shall be Type 304 stainless steel. Each bolt shall be provided with neoprene and cadmium-plated steel washers under the heads. Nails shall be stainless steel. Hardware shall meet the salt-spray fog test as defined by ASTM B 117.

11. Cold water basin. Basin shall be completely watertight and constructed of Type 304 stainless steel. Basin shall be constructed and installed to ensure that air will not be entrained in outlets when operating and no water will overflow on shutdown. Each individual sump shall be provided with an individual outlet. Each outlet shall be provided with a 1/2 inch mesh, zinc-coated steel wire securely mounted to prevent rash from entering the outlet. Each basin shall be provided with overflow and valved drain connections. Each basin shall be provided with a float-controlled, makeup water valve. The makeup water shall discharge not less than 50 mm (2 inches) or two pipe diameters, whichever is greater, above the top of the basin.

12. Water distribution system. Water distribution shall be the gravity-flow type system which distributes water evenly over the entire fill surface. Each tower cell shall be designed so that a water flow of 140 percent capacity will not cause overflowing or splashing. The distribution system for each cell shall include adjustable flow control valves. The entire distribution system shall be self-draining and nonclogging. Piping shall be either cast iron, ductile iron, threaded-glass-fiber reinforced epoxy pipe, polypropylene, or Schedule 80 black steel. System shall be provided with open basins which includes a splash box or baffles to minimize splashing of incoming water and holes or spray nozzles that evenly distribute the water over the entire decking areas. Holes shall be provided with ceramic or plastic orifice inserts. Spray nozzles shall be stainless steel, bronze or polypropylene. Nozzles shall be cleanable, nonclogging, removable and spaced for even distribution.

13. Drift eliminators. Eliminators shall be provided to limit drift loss to not over 0.005 percent of the circulating water rate.

14. Fill. Tower fill shall be splash or film, type. Fill material shall be free to expand or contract without warping or cracking. No plasticized wood cellulose shall be provided for fill material. Fill shall be removable or otherwise made accessible for cleaning. Space supports shall be stainless steel and shall prevent warping, sagging, misalignment or vibration of the fill material. Fill material and supports shall be designed to provide for an even mixing of air and water. Fill material shall be constructed of aluminum, stainless steel, tile of multi-cell set without mortar or zinc-coated steel. Fill shall conform to UFGS.

15. Noise control. Sound power level data for the cooling tower shall be based on tests conducted in accordance with ANSI S1.13. Provide noise control to meet maximum sound level indicated.

10-5.3 **Pumps.** Pumps shall be electrically driven, non-overloading, centrifugal type which conform to HI 1.1-1.5. Pump shall have sufficient capacity and selected based on the design after award. Pumps shall be selected at or within 5 percent of peak efficiency. Pump curve shall rise continuously from maximum capacity to shutoff. Pump motor shall conform to NEMA MG 1 and have sufficient wattage (horsepower) to be non-overloading at any point on the pump curve. Three phase motors of one 1 HP or greater shall be premium efficiency. Motors shall have TEFC type enclosures. Pump motor shall be equipped with an across-the-line magnetic controller in a NEMA rated enclosure appropriate for environment located. Enclosure shall have a “HAND-OFF-AUTO” switch in the cover. Pump speed shall not exceed 1,750 rpm. Pump shall be accessible for servicing without disturbing piping connections. A wye or basket strainer shall be provided at the inlet of each pump. A check valve shall be provided at the outlet of each pump. Provide a standby chilled water pump and standby condenser water pump for each chilled water plant that has these pumps. This will provide redundancy in case one pump is out for either system.

10-5.3.1 **Construction.** Shaft seal shall be mechanical-seal type. Impeller shall be statically and dynamically balanced. Each pump casing shall be designed to withstand the discharge head specified plus the static head on the system plus 50 percent of the total, but not less than 862 kPa (125 psig). Pump casing shall be close grained cast iron. High points in the casing shall be provided with manual air vents; low points shall be provided with drain plugs. Impeller, impeller wearing rings, glands, casing wear rings an shaft sleeve shall be bronze. Shaft shall be carbon or alloy steel, turned and ground. Bearings shall be ball-bearings, roller-bearings, or oil-lubricated bronze-sleeve type bearings and be efficiently sealed or isolated to prevent loss of oil or entrance of dirt or water. Pump and motor shall be mounted on a common cast iron or steel “bent-frame” base. Pump and motor shall be standard coupled. C-face, close-coupled or any non-standard coupling will not be allowed.

10-5.3.2 **Mechanical Shaft Seals.** Seals shall be single, inside mounted, en-face-elastomer bellows type with stainless steel spring, brass or stainless steel seal head, carbon rotating face and tungsten carbide or ceramic sealing face. Glands shall be bronze and of the water-flush design to provide lubrication flush across the face of the seal. Bypass line from pump discharge to flush connection in gland shall be provided, with filter or cyclone separator in line.

## 10-6 AIR DISTRIBUTION SYSTEMS

10-6.1 **Air handling units.** Units shall include fans, coils, airtight insulated casing, adjustable V-belt drives, belt guards for externally mounted motors, access sections for maintenance, combination sectional filter mixing box, internal vibration isolators and appurtenances required for required operation. Air handling unit shall be provided with continuous high output ultraviolet (UV) lamps on the downstream side of the cooling coil for improved air quality. Air handling unit shall have published ratings based on tests performed according to ARI 430. All sections shall be double walled, constructed of a minimum 18 gauge galvanized steel and 50 mm (2 inch) thick insulation. Casing shall be designed and constructed with an integral structural steel frame such that exterior panels are non-load bearing. Casing shall be provided with inspection doors, access sections and access doors. Inspection and access doors shall be insulated, fully gasketed, double-wall type, of a minimum 18 gauge outer and 20 gauge inner panels. Drain pans shall be

constructed water tight, treated to prevent corrosion and designed for positive condensate drainage. Coils shall be fin-and-tube type constructed of seamless copper tubes and copper fins mechanically bonded or soldered to the tubes. Cooling coils shall have a maximum of 315 fins/m (8 fins/inch) to allow for easy cleaning, and shall be sized for a maximum face velocity of 2.8 m/s (550 fpm) to preclude moisture carryover. Coils shall be rated and certified according to ARI 410. Filters shall be listed according to the requirements of UL 900. Filters shall be 50 mm (2 inch) depth, sectional, disposable type of the size indicated and shall have an average efficiency of 25 to 30 percent when tested according to ASHRAE 52.1. Filters shall be UL Class 2. Air handling units with multiple fans shall be double-inlet, centrifugal or plug type with each fan in a separate scroll. Fan bearings shall be sealed against dust and dirt and shall be precision self-aligning ball or roller type. Bearing life shall be L50 rated at not less than 200,000 hours as defined by AFBMA Std 9 and accessible at the drive side of the unit. Motor shall be of sufficient size to be non-overloading at any point on the fan curve and shall be premium efficiency. Motor enclosures shall be of the totally enclosed type. Motor shall be equipped with an across-the-line magnetic controller in a NEMA 250 rated enclosure, appropriate for its location, with a “HAND-OFF-AUTO” switch in the cover. Provide constant speed or variable speed motors as indicated. Motors shall be non-overloading on any point of the fan curve.

Provide duct mounted dial thermometer (0°F to 100°F) in the supply air duct of each air handling unit so that maintenance personnel can check the supply air temperature to see if the unit is operating properly.

Variable frequency drive (VFD) motor and controls shall have the following characteristics.

1. Input power shall be as indicated. Voltage may vary by +/- 10%. Motor base frequency shall be 60 +/- 2 Hz. Motor design speed shall be 3550 RPM. Output frequency range shall be between 65% and 100% motor speed.

2. The VFD shall be capable of 100% full load continuous output.

3. Minimum drive efficiency shall be 97% at motor base speed and rated torque. Losses shall include all control power and cooling system losses associated with the drive. Displacement power factor shall be 95% throughout the entire operating speed range as measured at the drive input terminals.

4. Fixed utility power (voltage and frequency) shall be converted to a variable voltage and frequency. The drive shall consist of three basic power sections. The first, a converter section consisting of a full-wave fixed diode bridge rectifier, shall convert incoming fixed voltage/frequency to a fixed DC voltage. The second section, a DC Link, shall filter and smooth the converted DC voltage. The third section, a transistorized inverter and control regulator, shall convert the fixed DC voltage to a sinusoidal wave, pulse width modulated (PWM) waveform.

5. The drive shall employ PWM modulation to minimize motor heating. An asynchronous carrier shall be employed to eliminate torque pulsations. Switching frequency shall be adjustable at 2, 4 or 8 kHz.

6. A DC Link reactor shall be included for each rating to minimize harmonic distortion and maximize input power factor.

7. The drive shall be housed in a unit-mounted cabinet, formed, assembled, front accessible and braced, NEMA rated enclosure appropriate for its location.

8. Enclosures shall be single bay, sheet steel with hinged access doors and a lockable, through-the-door handle operator mechanism.

9. Construction safety features shall include:

    a. Provisions to padlock main disconnect handle in the “OFF” position.

    b. Mechanical interlock to prevent opening cabinet door with disconnect in the “ON” position or moving disconnect to the “ON” position while the door is open.

    c. Warning signs on terminals that are energized with the power disconnect “OFF”.

10. The operator interface panel shall consist of a door mounted back-lit LCD display, capable of controlling the drive and air distribution system settings for proper drive operation. The drive parameters will be preset in the factory using the keypad on the door of the drive.

10-6.2 **Terminal units.** Variable air volume (VAV) boxes shall be certified under the ARI Standard 880-94 Certification program and carry the ARI seal. The VAV box casing shall be minimum 22 gauge galvanized steel, internally lined with 1/2 inch dual density glass fiber insulation which complies with UL 181 and NFPA 90A. All exposed insulation edges shall be coated with NFPA 90A approved sealant to prevent entrainment of fibers into the airstream. The discharge connection shall be slip and drive construction for attachment to metal ductwork. The damper shall be fabricated from heavy gauge steel with the shaft rotating in bronze self-lubricating bearings. Nylon bearings are not acceptable. VAV box shall have a multi-point, center averaging velocity sensor. Sensor shall provide control signal accuracy of +/-5%. Control shall be pressure independent, analog electric type. All controls shall be installed in an attached NEMA 1 enclosure.

10-6.3 **Fans.** Fans shall be provided in accordance with UFGS. V-belt drives shall be designed for not less than 150 percent of the connected driving capacity. Motors shall not exceed 1800 rpm. Fans shall be belt-driven or provided with speed controllers for direct-drive fans. Three phase motors of 1 HP or larger shall be premium efficiency electric motors. Motors exposed to the weather shall have totally enclosed type enclosures.

10-6.4 **Ductwork.** Provide duct systems conforming to UFGS and to the recommendations of the SMACNA Duct Construction Standards including seal class requirements. Fire and smoke dampers and smoke detectors shall be provided where required by code. Balancing dampers shall be provided at all branch takeoffs and for all air devices. Provide permanent access to dampers through concealed actuators, through access panels or through accessible ceilings (i.e. T-bar). Internally lined ductwork shall not be allowed. Pressure sensitive tape shall not be used as a sealant.

10-6.4.1 Flexible ductwork shall be limited to runouts, shall be adequately supported to prevent kinks and shall not exceed 3.2 m (10 feet) in length. Runouts shall be pre-insulated, factory fabricated and conform with NFPA 90 and UL 181.

10-6.4.2 Ducts conveying grease laden air shall be in accordance with NFPA 96 and be constructed of stainless steel. Access panels shall be provided as required by code.

10-6.5 **Supply diffusers and registers.** Diffusers shall be located to ensure that the air distribution will completely cover all surfaces of exterior walls with a blanket of conditioned air or may be of a compact design so long as “dead spots” within air conditioned spaces are avoided. At least one diffuser shall be provided in each habitable room. Diffusers shall be provided with integral opposed bladed damper. Diffusers shall be provided with air deflectors as required for proper air flow in the space. Diffusers shall be aluminum. Core velocity shall be limited to 3 m/sec (600 fpm) maximum, with a maximum pressure drop of 0.82 Pa/m (0.1 inch water gauge). Ceiling mounted units shall have factory finish to match ceiling color, and shall be installed with rims tight against ceiling. Sponge-rubber gaskets shall be provided between ceiling or wall and surface-mounted diffusers for air leakage control. Diffuser boots shall be sealed tight to the wall or ceiling they penetrate using duct mastic or caulking. Suitable trim shall be provided for flush-mounted

diffusers. Duct collar connecting the duct to the diffuser shall be airtight and shall not interfere with the volume controller. Wall supply registers shall be installed atleast 150 mm (6 inches) below the ceiling.

10-6.6 **Transfer, return and exhaust registers and grilles.** Grilles shall be fixed horizontal or vertical louver type similar in appearance to the supply diffuser face. Registers shall be provided with integral opposed blade dampers. Registers shall be aluminum. Core velocity shall be limited to 2 m/sec (400 fpm) maximum, with a maximum pressure drop of 0.5 Pa/m (0.06 inch water gauge). Grilles shall be provided with sponge-rubber gasket between flanges and wall or ceiling. Register/grille boots shall be sealed tight to the wall or ceiling they penetrate using duct mastic or caulking. Wall return grilles shall be located atleast 150 mm (6 inches) above the floor or below the ceiling.

10-6.7 **Fire dampers.** Fire dampers shall be located and installed in accordance with NFPA requirements, and shall conform to the requirements of UL 555. Fire dampers shall be automatic operating, and shall be rated for the maximum system velocity and pressure. Fire dampers shall be equipped with a steel sleeve or adequately sized frame installed in such a manner that disruption of the attached ductwork, if any, will not impair the operation of the damper. Damper shall not reduce the duct or the air transfer opening cross-section area. Access doors shall be provided at all fire dampers.

10-6.8 **Smoke dampers.** Smoke damper and actuator assembly required per NFPA 90A shall meet the Class II leakage requirements of UL 555S. Dampers shall be rated not less than 10 m/s (2000 fpm) air velocity.

10-6.9 **Duct smoke detectors.** Duct smoke detectors shall conform to the requirements of UL 268A. Duct smoke detectors shall have perforated sampling tubes extended into the air duct. Detector circuitry shall be mounted in a metallic enclosure exterior to the duct. Detectors shall have manual reset. Detectors shall be rated for air velocities that include air flows between 2.5 and 20 m/s (500 and 400 fpm). Detectors shall be powered from the HVAC control panel. At minimum, detectors shall have two sets of normally open alarm contracts and two sets of normally closed alarm contacts. Detectors shall be connected to the building fire alarm panel for alarm initiation. A removable annunciation lamp and accessible removable reset switch shall be provided for duct detectors that are mounted eight feet or more above the finished floor and for detectors that are not readily visible.

10-6.10 **Access doors.** Provide in ductwork and plenums at all air flow measuring devices, automatic dampers, fire dampers, coils, thermostats and other devices requiring service and inspection.

10-6.11 **Exterior penetrations.** Outside air intakes and exhaust penetrations through the building envelope, excluding the roof, shall be located in existing building openings (i.e. window openings) and be of minimum sizes indicated on the plans. These penetrations shall be provided with louvers of sufficient free area to prevent water from passing through the building envelope. Details including size, location and appearance shall be included in the design submittal for Government approval.

10-6.12 **Roof penetrations.** Roof penetrations shall be as indicated on the attached drawings. Details including size, location and appearance shall be included in the design submittal for Government approval.

## 10-7 PIPING SYSTEMS

10-7.1 **Piping systems.** System design, component selection and system installation, including pressure containing parts and material, shall be based upon a minimum service pressure of 862 kPa at 66 degrees C (125 psi at 150 degrees F); minimum ANSI Class 125. Condenser and chilled water piping shall be steel pipe, with the exception that piping 100 mm (4 inches) and smaller may be copper tubing.

1. Steel pipe shall conform to ASTM A 53/A 53M, Schedule 40, Type E or S, Grades A or B. Type F pipe shall not be used.

2. Copper pipe shall conform to ASTM B 88, Type K or L.

10-7.1.2 **Casing.** Polyvinyl Chloride (PVC) casings shall conform to ASTM D 1784, Class 12454-B with a minimum thickness equal to the greater of 1/100 the diameter of the casing or 1.50 mm.

10-7.1.3 **Condensate drain pipe.** Condensate drain pipe shall be copper tubing, Type L. Pipe size shall be 25 mm (1 inch) for drains serving one piece of air handling equipment and 40 mm (1-1/2 inch) for drains serving multiple pieces of air handling equipment.

10-7.2 **Water treatment.** Provide water treatment based on the attached water analysis report in accordance with UFGS to mitigate corrosion and scale and to prevent biological growth in the condenser water and chilled water systems.

10-7.3 **Makeup water.** Provide a water pressure reducing valve with pressure gauge at the chilled water makeup point of connection. Pressure gauge shall be located downstream of the pressure reducing valve.

## 10-8 INSULATION

### 10-8.1 Pipe Insulation

1. Aboveground cold pipe except condensate drains. Provide cellular glass type insulation, ASTM C 552, Type II, and Type III in accordance with UFGS.

2. Aboveground condensate drains. Provide flexible elastomeric cellular insulation, ASTM C 534, Type I or II in accordance with UFGS.

3. Aboveground hot pipe. Provide mineral fiber type insulation, ASTM C 547, in accordance with UFGS.

4. Below ground cold and hot pipe. Provide prefabricated insulated pipe and fittings. Foam insulation for prefabricated insulated pipe and fittings shall be polyurethane foam meeting the requirements of ASTM C 591 having a density of not less than 32 kg per cubic meter (2 pcf). Carrier pipe shall be metallic as indicated in paragraph 10.7 Piping Systems.

10-8.2 **Duct Insulation.** Duct insulation shall be limited to the following and shall be installed in accordance with UFGS.

1. Rigid Mineral Fiber, ASTM C 612, Type IA, IB, II, III and IV.

2. Flexible Mineral Fiber, ASTM 553, Type I or Type II up to 121 degrees C (250 degrees F). ASTM C1290 Type III.

## 10-9 INSTRUMENTATION AND CONTROLS

All pressure gauges and thermometers exposed to the weather shall have either a stainless steel casing, aluminum casing with an epoxy coating, or chrome plated brass case with stainless steel ring and be weatherproof. All electrical panels exposed to weather shall be NEMA 4X type.

A pressure gauge and thermometer shall be provided at the inlet and discharge of each chiller, pump, air handling unit and fan coil unit.

Motor control centers (MCC's) shall be provided with reverse phase and phase failure relay to detect phase unbalance or reverse phase condition. Upon detection of 10% phase unbalance or a reverse phase

condition, all motors shall stop, an audible alarm activated and green pilot light de-energized Provide a green pilot light located on the starter labeled “Power Normal”. This panel is not required for starters with internal; phase monitor.

Individual barracks sleeping rooms shall be provided with individual room temperature control.

Control system shall be direct digital control (DDC). Provide all devices required, including current transducers, transformer, thermostats, sensors, controllers, actuators, control valves, dampers, transmitters, flow meters, etc., to provide a complete and operable system. All equipment and systems shall be automatically controlled by the control system. Written and posted control system instructions shall be provided for each system. The instructions shall include half-size laminated drawings and shall include the control system schematic, equipment schedule, ladder diagram, sequence of operation, panel arrangement drawings, wiring diagram, and valve and damper schedules. Building controllers shall be fully BACNET compatible and be expandable to be able to tie into a central DDC building and energy management system at DPW HQ. Points shall include, at minimum:

1. Central Plant (includes chillers, cooling towers, pumps, hot water plant)

   Chiller on/off (each chiller)
   Chiller status (each chiller)
   Flow switch
   Load limit startup/pull down
   Chilled water temperature reset
   Chilled water supply temperature
   Chilled water return temperature
   Chilled water supply setpoint temperature
   Condenser water supply temperature
   Condenser water return temperature
   Condenser water supply setpoint temperature
   Hot water supply temperature
   Hot water return temperature
   Hot water supply setpoint temperature
   Cooling tower fan on/off (each fan)
   Cooling tower fan speed (for multi-speed fans)
   Cooling tower fan status (each fan)
   Pump on/off (each pump)
   Pump status (each pump)
   Flow alarm – no chilled water flow.
   Flow alarm – no condenser water flow.

2. Air handling units

   Fan on/off
   Fan status – differential pressure sensor
   Fan speed (for VFD AHU’s)
   Fan high static limit switch
   Filter status – differential pressure sensor
   Chilled water control valve position
   Supply air temperature
   Supply air temperature setpoint
   Supply air duct pressure (for VFD AHU’s)
   Supply air duct pressure setpoint (for VFD AHU’s)
   Return air temperature (for non-VFD AHU’s)
   Return air temperature setpoint (for non-VFD AHU’s)

Alarm – high supply air duct pressure
Alarm – power phase failure
Alarm – smoke detector (for AHU's requiring smoke detectors)

3. Variable Air Volume Boxes (through VAV unit controller)

   Room temperature sensor
   VAV box on/off
   VAV box actuator
   VAV box damper position
   VAV box max CFM setpoint
   VAV box min CFM setpoint
   VAV box CFM
   Room temperature setpoint
   Room temperature readout

4. Fans

   Fan on/off
   Fan status – current sensor

**10-10 TESTING, ADJUSTING AND BALANCING.** Testing, adjusting and balancing of each system shall be the Contractor's responsibility. Testing and balancing of the air and hydronic systems shall be accomplished by a firm certified for testing and balancing by the Associated Air Balance Council (AABC) or National Environmental Balancing Bureau (NEBB). Prior to testing, adjusting, and balancing, the Contractor shall verify that the systems have been properly installed and are operating as specified. Testing of individual items of equipment shall be performed by a person authorized to perform such testing and startup by the equipment manufacturer. The contractor shall correct all systems and equipment not found in compliance, and shall be responsible for all labor and materials required for this effort. AABC MN-1, NEBB-01, SMANCA-07 or ASHRAE 111 shall be used as the standard for providing testing of air and water systems. The selected standard shall be used throughout the entire project. All recommendations and suggested practices contained in the selected standard shall be considered mandatory. Instrumentation accuracy shall be in accordance with selected standard.

10-10.1 **Piping systems.** Each piping system including pipe, valves, fittings and equipment shall be hydrostatically tested and proved tight at a pressure of 1-1/2 times the design working pressure, but not less than 699 kPa (100 psi) for a period of not less than two hours with no appreciable loss in pressure. Piping shall not be insulated until testing is completed and acceptable. Upon completion of installation and prior to startup, each hydronic system shall be balanced. All balancing data, including deficiencies encountered and corrective action taken, shall be recorded. Following final acceptance of certified reports by the Contracting Officer, the setting of all HVAC adjustment devices shall be permanently marked by the Contractor's balancing engineer so that adjustment can be restored if disturbed at any time.

10-10.2 **Equipment.** Each item of central operating equipment provided, including air handling units shall be tested in accordance with the equipment manufacturer's standard testing procedures. A factory representative shall be present for the startup and testing of each item of equipment. A certified report shall be provided for each item of equipment tested.

**10-11 COMMISSIONING.** All HVAC systems and equipment including controls shall be commissioned in accordance with the UFGS and ASHRAE Guideline 1.

**10-12 TRAINING.** The Contractor shall conduct a training course for the operating for all HVAC operating systems and individual items of equipment. The field instructions shall cover all the items of equipment provided as well as the overall systems. The training period shall consist of a total of 40 hours of

normal working time and shall start after the systems are functionally completed and testing, adjusting and balancing have been completed. Training shall also include a minimum of two days on-site training. Factory representatives shall be present to assist in training for every item of operating equipment provided. Contractor shall provide eight copies of operation and maintenance instructions for each item of equipment provided. Training shall consist of startup, normal operation and shutdown, as well as demonstrations of routine maintenance operations. The Contracting Officer shall be notified at least 14 days prior to date of proposed conduction of the training course.

# CHAPTER 11
# ENERGY CONSERVATION

## 11-1. ENERGY RECOVERY EQUIPMENT.

11-1.1. **Heat recovery coils.** Coil assembly shall be factory fabricated and tested air-to-liquid-to-air energy recovery system for transfer of sensible heat from exhaust air to supply air stream. System shall deliver an energy transfer effectiveness without cross-contamination with maximum energy recovery at minimum life cycle cost. Components shall be computer optimized for capacity, effectiveness, number of coil fins per inch, number of coil rows, flow rate and frost control. Coils, pumps, controls and piping materials shall conform to Chapter 10 – Heating, Ventilating, and Air Conditioning.

11-1.2. **Heat pipe.** Device shall be a factory fabricated, assembled and tested, counterflow arrangement, air-to-air heat exchanger for transfer of sensible heat between return and supply streams or outside air and supply air streams. Device shall deliver an energy transfer effectiveness without cross-contamination. Heat exchanger tube core shall be seamless aluminum or copper tube with extended surfaces, utilizing wrought aluminum Alloy 3003 or Alloy 5052, temper to suit. Tubes shall be fitted with internal capillary wick, filled with an ASHRAE 15, Group 1 refrigerant working fluid, selected for system design temperature range, and hermetically sealed. Heat exchanger frame shall be constructed of not less than 16 gauge galvanized steel and fitted with intermediate tube supports, and flange connections. Tube end-covers and a partition of galvanized steel to separate exhaust and supply air streams without cross-contamination and in required area ratio shall be provided. A drain pan constructed of welded Type 300 series stainless steel shall be provided. Heat recovery regulation shall be provided. Coil shall be fitted with pleated flexible connectors.

11-1.3 **Heat recovery.** Heat recovery from the air conditioning system shall be provided. Heat recovery shall be a complete and usable system to include heat recovery unit, heat exchangers, storage tanks and pumps. Recovered waste heat from the air conditioning system shall supplement the hot water system in generating domestic hot water. Equipment, piping and appurtenances shall conform to Chapter 8 - Plumbing and Chapter 10 - HVAC.

# CHAPTER 12

# FIRE PROTECTION

## 12-1 GENERAL REQUIREMENTS

12-1.1. **Fire Protection scope.** The fire protection requirements for the project, as indicated in this Chapter, are generally contained within this chapter unless otherwise noted. Other fire protection scope indicated by other Chapters and the Attachment Concept Design Documents (Drawings, Fire Protection Analysis), which are to be used for the design of this project, are subject to requirements within this section. All requirements within this Chapter shall take precedence over any conflicting requirement in other Chapters, Attachment Concept Design Documents or any other criteria and shall be brought to the attention of the Contracting Officer for resolution in writing. All definitions and acronyms used in this section are intended to be used for this section only unless otherwise noted. All installed materials and equipment are in general to be listed by an independent laboratory such as Underwriters Laboratory. Catalog cuts in the attachments are not intended to be exact equipment provided. Equipment shall be similar to catalog cuts and based on design developed after award.

12-1.2. **Design Standards and Codes.** The design of this project shall be in accordance with the design standard and codes stated within this paragraph. The following list is not complete. Other applicable references are to be used when required by other Chapters and other references used within these standards and codes.

12-1.2.1. UFC 3-600-01 (UFC), Design Fire Protection Engineering for Facilities, 2003 edition.

12-1.2.2. International Building Code (IBC) 2000 edition.

12-1.2.3. NFPA 10, Portable Fire Extinguishers, 2002 edition.

12-1.2.4. NFPA 13 (FSC), Installation of Sprinkler Systems, 2002 edition.

12-1.2.5. NFPA 13R, Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and including Four Stories in Height, 2002

12-1.2.6. NFPA 17A, Wet Chemical Extinguishing Systems, 2002.

12-1.2.7. NFPA 20, Stationary Pumps for Fire Protection, 1999.

12-1.2.8. NFPA 24, Private Fire Service Mains, 2002 edition.

12-1.2.9. NFPA 30, Flammable and Combustible Liquids Code, 2000 edition.

12-1.2.10. NFPA 70, National Electrical Code, 2002.

12-1.2.11. NFPA 72 (FAC), National Fire Alarm Code, 2002 edition.

12.1.2.12. NFPA 75, Electronic Computer/Data Processing Equipment, 2003.

12-1.2.13. NFPA 80, Fire Doors and Fire Windows, 1999.

12-1.2.14. NFPA 90A, Standard for the Installation of Air Conditioning and Ventilating Systems, 2002.

12-1.2.15. NFPA 96, Ventilation Control and Fire Protection of Commercial Cooking Operations, 2001 edition.

12.1.2.16. NFPA 101 (LSC), Safety to Life from Fire in Buildings and Structures, 2003 edition.

12-1.2.17. ER 1110-345-700, Engineering and Design Analysis, Drawings and Specifications, 30 May 1997.

12-1.2.18. ADA Accessibility Guidelines for Buildings and Facilities (ADAAG).

12-1.2.19. MIL-HDBK-1022A (1022), Petroleum Fuel Facilities, 01 November 1999.

12-1.2.20. UL Fire Protection Equipment Directory (ULFPED), 2002 edition.

12-1.2.21. UL Building Materials Directory (ULBMD), 2002 edition.

12-1.2.22. UL Fire Resistance Directory (ULFRD), 2001 edition.

12-1.2.23. TI 800-01, Technical Instructions Design Criteria, 20 Jul 98.

12-1.2.24. Unified Facilities Guide Specification (UFGS).

12-1.2.24.1. Section 7840a, Firestopping, April 2003.

12-1.2.24.2. Section 13920A, Fire Pumps, December 2001.

12-1.2.24.3. Section 13930A, Wet Pipe Sprinkler System, Fire Protection, March 2003.

12-1.2.24.4. Section 13945A, Preaction and Deluge Systems, Fire Protection, March 2003.

12-1.2.24.5. Section 13851A, Fire Detection and Alarm System Addressable, February 2002.

**12-2 APPENDIX AND RECOMMENDATIONS.** Fire protection criteria in general that are stated in any reference, which are either in the appendix, stated as a recommendation or addressed with a “should” shall be considered to be mandatory requirements and will be incorporated into the design.

**12-3 DEFINITIONS**

12-3.1. **General.** Definitions as indicated in LSC shall be used unless otherwise noted.

12-3.2. **Fire Protection Work.** All construction materials and installation necessary to install complete fire alarm systems, automatic fire sprinkler systems, fire rated partitions, fire rated doors & hardware, fire rated windows & hardware, firestopping, fire rated construction, exit signs, automatic fan shutdown, all means of egress and any other work as designated by the DAHJ.

**12-4 AUTHORITY HAVING JURISDICTION (AHJ):** The AHJ is HQUSACE, CEMP-ET, Mr Robert Diangelo. The District Authority Having Jurisdiction (DAHJ) is the Honolulu Engineer District Fire Protection Engineer, CEPOH-EC-Q and will be consulted for all interpretations of fire protection criteria to be used in this project through the Contracting Officer or his representative. Contractor shall not contact the AHJ and shall direct all questions, interpretations and clarifications to the DAHJ. All requests for information by the Contractor shall be submitted to the DAHJ in writing through the Contracting Officer with the appropriate sketches, basis for waiver, specific question and any other information deemed necessary by the DAHJ. In general, a minimum of 7 calendar days is required by the DAHJ to respond to all inquiries. The 7 days will start from the day of receipt by the DAHJ. In the event interpretation or approval is required from AHJ, an additional 7 calendar days will normally be required.

**12-5 WAIVER TO CRITERIA.** All waivers to be processed in accordance with UFC shall be

forwarded to the DAHJ for preliminary assessment. Waivers are to be forwarded to AHJ for approval if deemed necessary by DAHJ.

**12-6 PRIORITY OF CONFLICTING REQUIREMENTS.** In general, Contractor to use UFC & UFGS as the main document for fire protection criteria and these documents shall take precedence over any other document in accordance with UFC. ETL's and specific code requirement will supercede general requirements found in UFC, otherwise the most restrictive requirement shall be provided. DAHJ shall be consulted on all conflicting requirements and reserves the right to make final determination or by coordinating with the AHJ if deemed necessary. Conflicting requirements of Life Safety and historical preservation shall be brought to the attention of the Contracting Officer in writing and resolved by the DAHJ and historical preservation officer.

**12-7 FIRE PROTECTION ENGINEER SERVICES.** Contractor shall hire a qualified Fire Protection Engineer licensed as a Professional Engineer to consult, design, inspect and prepare design drawings, specifications, calculations and supervise construction as necessary. Qualifications must be submitted in writing to the Contracting Officer for approval. Any other licensed professional engineer or architect, who is a current Member status of the Society of Fire Protection Engineers with qualifying experience can act as the Fire Protection Engineer. Approval through the Contracting Officer, in writing, by the DAHJ is required prior to commencement of the building design.

**12-8 IBC REQUIREMENTS**

12-8.1. **Allowable area and allowable height.** Design analysis shall confirm the allowable construction type and allowable area/height in accordance with IBC by calculating the allowable areas and submitting them in the design analysis. Any type of construction allowed by the IBC will be allowed on this project as long as IBC allowable area and height restrictions are provided.

12-8.2. **Location on property.** Design analysis shall show the exterior wall/opening protection required in accordance with IBC.

12-8.3. **Occupancy Separation walls.** IBC occupancy separation walls are required to be installed throughout the building in addition to the Protection from Hazards separation walls required in LSC.

**12-9 LIFE SAFETY REQUIREMENTS**

12-9.1. **General.** LSC with UFC amending portions of LSC are to be provided.

12-9.2. **Stairs.** All required stairs shall be protected in accordance with LSC.

12-9.3. **Magnetic Card Locks.** Use of magnetic card type locks shall meet LSC for egress.

12-9.4. **Firefighter Access.** Firefighter access shall be provided in accordance with UFC.

12-9.5. **Fire Rated Shafts.** Use of fire rated shafts shall be minimized on all buildings. All pipe risers shall be separated from the duct risers and be firestopped at the floors. All duct risers, which penetrate more than 1 floor shall be enclosed in a 1 hr fire rated shaft. Use of subducts are prohibited. Fire dampers shall be listed with ULBMD or FM and conform to Chapter 10 – HVAC.

12-9.6. **Interior Finishes.** Interior finishes shall be provided in accordance with LSC.

12-9.7. **Exit Signs.** Internally illuminated signs using Light emitting diode (LED) type shall be used.

12-9.8. **Portable fire extinguishers**. Provide portable fire extinguishers in semi-recessed cabinets throughout the building in accordance with NFPA 10 and shall be listed with ULFPE or FM.

12-9.9. **Fire rated assemblies.** Fire rated doors/door frames and windows (glazing and window frame) shall be listed by ULBMD or FM and shall be installed in accordance with the door/window manufacturer and NFPA 80.

12-9.10. **Fire rated construction.** All fire rated walls, floors, ceilings, floor/ceilings, roof/ceilings shall meet ULFRD or FM.

12-9.11. **Firestopping.** All penetrations of fire rated walls by ducts, pipe or conduit must be protected with listed firestopping and installed in accordance with the manufacturer's listed installation instructions. Listed installation instructions shall be submitted for approval to the Contracting Officer prior to installation. Firestopping shall be listed with ULFRD or FM.

12-9.11.1 Firestopping ID plate: A permanent wall identification plate (WID) and a pipe tag are required to be permanently mounted adjacent to every fire barrier penetration on both sides of the wall or floor. The WID plate shall be minimum 4" X 3"(102mm X 77 mm) in size and the pipe tag shall be minimum 1.5" X 1.5"(38mm X 38mm) in size, have raised letters & constructed of 20 gage minimum corrosion proof metal. In the event there are multiple pipe penetrations with the same firestopping system, a single wall ID plate can be used if each pipe penetration is listed on the WID plate separated with commas and each pipe is identified with a pipe tag. Information on the WID must be clearly readable from a minimum of 5 feet (1524 mm) Shop drawings to be submitted for approval. All WID and pipe tags to be submitted for approval prior to installation.

The wall ID plate shall contain the following:

___hr Fire Barrier Penetration
Pipe # _____
UL System #_____
Description: _____
_____
F rating: _____hr
T rating: _____hr
Wall/Floor Material: _____
Sealant ID _____
Manufacturer _____
Certified Installer:
Name: _____
Address: _____
_____
Installation Date: _____

Example:

1 hr Fire Barrier Penetration
Pipe # _1, 2, 5__
UL System #_WL2078_____
Description: _Plastic pipe thru 1 hr gypsum wall_____
F rating: _1_hr
T rating: _1_hr
Wall/Floor Material: Gypsum wall
Sealant ID: Hilti CP 642_____
Manufacturer _Hilti_____
Certified Installer:
Name: Mr Chester Yamamoto___

Company: Firestopping Inc.
Address: 1920 Ala Moana Blvd_
Honolulu, HI 96818__
Installation Date: 30 June 2003___

The pipe tag shall contain the following:

Pipe # _____
Insulated: _____
Pipe Material: _____
Pipe Size: _____
Use: _____

Example:

Pipe # 5__
Insulated: No
Pipe Material: CPVC
Pipe Size: _4"_____
Use: domestic CW

**12-10 FIRE SPRINKLER AND FIRE PUMP REQUIREMENTS**

12-10.1. **General.** All the buildings shall be provided with new wet pipe sprinkler system meeting FSC, FSCR, UFC and UFGS 13930. Sprinkler flow switches, pressure switches and tamper switches are to be connected to the building fire alarm panel.

12-10.2. **Design area and density.** Area/density method in accordance with the UFC shall be used. Hydrant flows shall be added to all hydraulic sprinkler calculations as indicated in UFC. Available water supply must provide the fire demand equivalent to the sum of sprinkler demand + hose stream(s) demand + domestic demand. Hydrant flow test shall be performed by Contractor to obtain available water supply capacity. Hydraulic calculations are to be performed using approved computer software. Minimum design hydrant pressure shall be 20 psig at full fire demand.

12-10.3. **Fire pump.** Listed engine driven fire pumps shall be provided in a building as indicated in accordance with UFC. Water storage tanks shall be provided in the event the available water supply flow capacity is exceeded and shall meet NFPA 22. Water tank capacity shall meet UFC. Fire Pump controller shall be NEMA type 4X. Fire Pump shall meet requirements in UFGS 13920A. Fire Pump Building shall be located 50 feet minimum from Quad C buildings (follow NFPA 20) and as indicated.

12-10.4. **Fire sprinklers.** Quick response sprinkler shall be used as a minimum in all Light Hazard occupancy areas throughout the building in accordance with FSC. Decrease in design area allowed by FSC for use with quick response sprinkler heads will be allowed.

12-10.5. **Fire Department Connections.** Fire department connections must be within 150 feet of hydrant.

12-10.6. **Backflow Preventers.** Double check type backflow preventers are required on all sprinkler system connections to the potable water supply, which are listed for fire service by an independent testing agency such as UL.

12-10.7. **Sprinkler flow farther than 10 feet from building.** All valves controlling sprinkler water flow farther than 10 feet from building shall be chain and locked open and all the valves 10 feet or closer to the

building shall be supervised with a weather resistant tamper switch connected to the fire alarm panel supervisory alarm circuit.

12-10.8. **Seismic requirements.** Seismic earthquake requirements in FSC are required.

12-10.9. **Plastic piping.** Plastic piping/fittings are not allowed.

12-10.10 **T drill fittings.** “T drill” method are not allowed.

12-10.10. **Post Indicator Valve.** Post indicator valve (PIV) is required on all sprinkler system supplies, NFPA 24. Elimination of the PIV will be allowed if the backflow preventer/shutoff valve assembly is located in the same location as the PIV, according to NFPA 24. Backflow preventer isolation valves to be indicating type with supervision.

12-10.11. **Hydrant flow test data.** Contractor shall use attached flow data and calculations for bidding purposes. The successful contractor shall perform a hydrant flow test to validate the project design after award. The hydrant flow test shall be performed in accordance with NFPA 291 and with the Schofield Barracks Water Treatment Plant clearwell pumps off. Flow data shall be submitted in accordance with Section Design After Award.

## 12-11 FIRE ALARM REQUIREMENTS

12-11.1 **General.** All buildings shall have fire alarm system including fire alarm panel, transmitter, and fire alarm annunciator, meeting FAC, ADAAG, LSC, UFC and UFGS 13851. All fire alarm systems shall be Class A, looped, addressable systems. Each building shall have a fire alarm panel and annunciator located inside the building on the 1st floor in an approved location. Special fire alarm requirements are found in UFC.

12-11.2. **T tapping.** T tapping of any fire alarm circuit is not allowed.

12-11.3. **Occupant notification.** All buildings shall be provided with visible and audible occupant notification appliances in accordance with ADAAG and FAC.

12-11.4. **Sequence of operation.** Fire alarm sequence of operations shown in the Fire Alarm Control Matrix (MATRIX) contained in Attachment 5.

12-11.5. **Server and Telecom Rooms.** Automatic smoke detection system shall be provided for the Server and Telecom rooms below raised floor and below ceiling, NFPA 75.

## 12-12 ROOF ACCESS

12-12.1 **Access Points.** Provide two roof access points for each of the buildings in this RFP (Bldgs 355, 356, 357 and 358), in accordance with the subsequent paragraphs.

12-12.2 **Access Locations.** For Building 355, the two roof access locations shall be on the third floor at the top landing of open exit stairs at grid lines "3" and "18". For Buildings 356, 357, and 358, the two roof access locations shall be on the third floor at the top landing of enclosed exit stairs at grid lines "2" and "20". Multiple roof access from a single exit stair shall not be permitted.

12-12.3 **Roof Access.** Roof access shall consist of hatch opening to the roof with an appropriate ladder. Clear hatch opening must be not less than 1.5 $m^2$ (16 $ft^2$) in area, with a minimum dimension of 610 mm (2 ft). Ladder shall conform to 29 CFR 1910.27, *Fixed Ladders*.

## 12-13 MISCELLANEOUS FIRE REQUIREMENTS

12-13.1. **Fuel tanks.** Fuel tanks installed for the fire pump shall be installed in accordance with UFGS

13920A, local and Federal requirements.

12-13.1.1 Provide single walled fuel tank as indicated on the attached drawings or aboveground concrete encased steel storage tank in an approved location. Aboveground concrete encased steel storage tanks are preferred by the Director of Public Works. Aboveground tank shall be located minimum 50 feet from above ground power lines. Distance from building and property lines shall be ½ of that indicated in 1022, 8.3.5.2.

12-13.1.2 Provide all appurtenances in 1022, Table 2 and NFPA 30, 2.3.2.3.3. General requirements of 1022, 8.5 shall be provided. Tank capacity shall not exceed 12,000 gallons. 40 CFR 112 requirements shall be provided, if the tank storage capacity exceeds 1320 gallons or a single container exceeds 660 gallons.

12-13.2. **Air handling units.** All air handling systems shall be provided with automatic shutdown in accordance with NFPA 90A. Air handling systems shall meet NFPA 90A and LSC.

12-13.4. **Server and Telecom Rooms.** Fire/smoke dampers are required in all ducts penetrating the Server and Telecom rooms. Other fire protection requirements of NFPA 75 shall be provided for the Server and Telecom rooms.

# CHAPTER 13

## SUSTAINABLE DESIGN

13-1. **SUSTAINABLE DESIGN GOALS**. This project shall be designed and constructed using sustainable design principles (within practical funding constraints) and an integrated team approach to provide a facility that:

- use resources efficiently and minimize raw material resource consumption, including energy, water, land and materials, both during the construction process and throughout the life of the facility.
- maximize resource reuse, while maintaining financial stewardship.
- move away from fossil fuels towards renewable energy sources.
- create a healthy and productive work environment for all who use the facility.
- display long-term value.
- protect and, where appropriate, restore the natural environment.

13-2. **PROJECT REQUIREMENTS**. The sustainable design integrated team approach will be summarized in the Sustainable Project Rating Tool document (SPiRiT). A SPiRiT Gold level is highly desired for this project. Sustainable design techniques shall be considered as they relate to site and building design, construction, and operation. Techniques that conserve energy, improve livability, and can be justified by life cycle cost analysis as cost effective are encouraged.

13-2.1. Engineer Technical Letter (ETL) 1110-3-491 provides basic criteria and information pertaining to the incorporation of sustainable design concepts in the design and construction of Military facilities. The level of incorporation of sustainable design principles will be measured through use of the Sustainable Project Rating Tool (SPiRiT). SPiRiT is the Army's version of the LEED Green Building Rating System™, developed by the U.S. Green Building Council (USGBC). The USGBC consists of the nation's foremost coalition of leaders from across the building industry working to promote buildings that are environmentally responsible, profitable, and healthy places to live and work. The ETL and SPiRiT are available from the following website: http://www.cecer.army.mil/sustdesign/.

13-2.2. Each offeror will complete and submit the SPiRiT document. The total point score will determine the SPiRiT Sustainable Project Level: Bronze, Silver, Gold, or Platinum. The SPiRiT document and additional sustainable design resources are found at Army's Sustainable Design and Development website: http://www.cecer.army.mil/sustdesign/.

13-2.2.1. The SPiRiT categories all follow the format:

- Intent: A statement of the primary goal for point credit.
- Requirement: Quantifiable conditions necessary to achieve stated intent.
- Technologies/Strategies: Suggested guidance on how to achieve the requirement.

13-2.3. The minimum requirement is a SPiRiT Silver level. Designs that do not achieve a SPiRiT Silver level shall be considered non-conforming. The proof-of-concept design is not intended to limit alternate designs that meet the Silver level of performance utilizing alternate methodologies.

13-2.4 Areas under consideration will include the following:

- Design strategies to minimize water runoff and promote percolation of water into the water table.
- Minimize or eliminate the need for irrigation of landscaped areas. This is a project requirement.
- Use of recycled or renewable construction materials.

- Use of low VOC materials. This is a project requirement for paint and carpet.
- Solar hot water heating.
- Use of water conservation plumbing fixtures. This is a project requirement.
- Natural ventilation in lieu of air-conditioning where possible. Use of ceiling fans and similar air movement devices.
- Use of high efficiency HVAC systems. This is a project requirement.
- Computerized Energy Management and Control System (EMCS)
- Maximizing use of daylight to augment conventional lighting.
- Energy efficient lighting fixtures. Energy-saving switching systems including multiple switching and occupancy sensors.
- Solar-powered site lighting.
- Photovoltaic energy production.

13-3. **SPiRiT REQUIREMENTS**. There are eight SPiRiT categories: Sustainable Sites, Water Efficiency, Energy & Atmosphere, Materials & Resources, Indoor Environmental Quality (IEQ), Facility Delivery Process, Current Mission, and Future Missions. Four of the eight categories have requirements or prerequisites. These are minimum requirements that must be met. No further points within each category will be allowed unless the minimum is achieved. Proposals that do not meet these requirements or prerequisites listed in the SPiRiT document will be considered non-conforming.

13-3.1. SPiRiT minimum requirement 1.R1: Erosion, Sedimentation, and Water Control. Design a site sediment and erosion control plan and a pollution prevention plan that conforms to best management practices in the EPA's Storm Water Management for Construction Activities, EPA Document No. EPA-833-R-92-001, Chapter 3, OR local Erosion and Sedimentation Control standards and codes, whichever is more stringent. The plan shall meet the following objectives:

- Prevent loss of soil during construction by storm water runoff and/or wind erosion, including protecting topsoil by stockpiling for reuse.
- Prevent sedimentation of storm sewer or receiving streams and/or air pollution with dust and particulate matter.
- Prevent hazardous material discharge into storm water systems.
- Prevent petroleum oils and lubricants (POL) discharge into storm water systems.

13-3.2. SPiRiT minimum requirement 3.R1: Fundamental Building Systems Commissioning. Verify and ensure that fundamental building elements and systems are designed, installed and calibrated to operate as intended. Implement all of the following fundamental best practice commissioning procedures.

- Engage a commissioning authority.
- Develop design intent and basis of design documentation.
- Include commissioning requirements in the construction documents.
- Develop and utilize a commissioning plan.
- Verify installation, functional performance, training and documentation.
- Complete a commissioning report.

13-3.3. SPiRiT minimum requirement 3.R2: Minimum Energy Performance. Establish the minimum level of energy efficiency for the base building and systems. Design to meet building energy efficiency and performance as required by Technical Instruction (TI) 800-01 (This Design Criteria is available from the following website: http://www.hnd.usace.army.mil/techinfo/ti.htm). Weather data for Schofield Barracks area is shown in Attachment 15.

13-3.4. SPiRiT minimum requirement 3.R3: CFC Reduction in HVAC&R Equipment. Zero use of CFC-based refrigerants in new base building HVAC&R systems.

13-3.5. SPiRiT minimum requirement 4.R1: Storage & Collection of Recyclables. Facilitate the reduction of waste generated by building occupants that is hauled to and disposed of in landfills. Provide an easily accessible area that serves the entire building that is dedicated to the separation, collection and storage of materials for recycling including (at a minimum) paper, glass, plastics, and metals.

13-3.6. SPiRiT minimum requirement 5.R1: Minimum Indoor Air Quality (IAQ) Performance. Establish minimum IAQ performance to prevent the development of indoor air quality problems in buildings, maintaining the health and well being of the occupants. Meet the minimum requirements of voluntary consensus standard ASHRAE 62-2001, Ventilation for Acceptable Indoor Air Quality and approved Addenda.

13-3.7. SPiRiT minimum requirement 5.R1: Environmental Tobacco Smoke (ETS) Control. Prevent exposure of building occupants and systems to Environmental Tobacco Smoke (ETS). Zero exposure of nonsmokers to ETS by prohibition of smoking in the building, OR, by providing a designated smoking room

designed to effectively contain, capture and remove ETS from the building. At a minimum, the smoking room shall be directly exhausted to the outdoors with no recirculation of ETS-containing air to the non-smoking area of the building. The smoking room shall also be enclosed with impermeable structural deck-to-deck partitions and operated at a negative pressure compared with the surrounding spaces of at least 7 Pa (0.03 inches of water gauge). Performance of smoking rooms shall be verified using tracer gas testing methods as described in ASHRAE Standard 129-1997. Acceptable exposure in non-smoking areas is defined as less than 1% of the tracer gas concentration in the smoking room as detected in the adjoining non-smoking areas. Smoking room testing as described in the ASHRAE Standard 129-1997 is required in the contract documents and critical smoking facility systems testing results must be included in the building commissioning plan and report or as a separate document.

## CHAPTER 14

## COMPREHENSIVE INTERIOR DESIGN

14-1 **THE COMPREHENSIVE INTERIOR DESIGN (CID) PACKAGE**. This proposal requires the completion of a CID Package. The CID package is the design of the total interior environment. It requires a Building Interior Design (BID) and Furnishings Interior Design (FID). The two categories of interior design cover different aspects of the interior environment and are funded through different sources. The Design Build Offerers' must discuss the CID package with the customer and obtain their written approval of the CID.

14-1.1 **Building Interior Design**. BID is the design of related interior finishes such as walls, ceilings, floor coverings, and built-in casework. It involves the selection and sampling of all applied finishes for the building's interior features. With the exception of furniture systems, which are funded with operations and maintenance (O&M) or non-appropriated funding (NAF), Building Interior Design is funded with military construction funds (MILCON) appropriated by Congress. This proposal is funded by MILCON appropriations.

14-1.1.1 Building Interior Design will include interior floor plans, finish schedules, and interior color samples. If necessary, it should include interior elevations showing finish placement. The products and materials specified are procured and installed by the contractor.

14-1.2 **Furnishings Interior Design (FID).** FID is the design of interior furnishings and the finishes related to them. FID designs are typically funded by the installation with operations and maintenance (O&M) funds.

14-1.2.1 Furnishings Interior Design (FID) involves the selection and sampling of the furnishings components of the interior environment. This may include furniture systems, freestanding furniture, beds, desks, chairs, conference tables, and accessories including artwork. The FID will include furniture placement plans, information on all freestanding furnishings and accessories, furniture cost estimates, and order data sheets. These products and materials coordination with the Government to procure these items in order for them to be in place before the building is occupied. The products and materials specified are procured by the Government and installed by the contractor.

14-1.3 **Décor Theme**: the Design Build Offerers' are responsible to provide a Theme for the Dining Facility CID submission. The Design Build Offerers' shall discuss the theme with and obtain approval of the theme from the customer before submitting the final CID Package.

14-2 **PRESENTATION FORMATS.**

14-2.1 **Binders**. Building Interior Design and Furnishings Interior Design information and samples are to be submitted in 8-1/2" x 11" format in three-inch or four-inch D-ring binders. Fold out items should have a maximum spread of 25-12 inches. Each binder should be labeled on the outside spine and front cover with the following information:

- Building Interior Design or Furnishings Interior Design.
- Project Title and Number.
- Location.
- Date.
- Volume Number (example: Volume 1 of 3).

14-2.2 **Color Boards**. Color boards should be sturdy enough to support all samples. Large samples, such as ceiling tiles or carpet samples can be provided separately from the color board in a loose sleeve that can be moved from one scheme to another. Use page protectors that are strong enough to keep pages from tearing out. Anchor large or heavy samples with mechanical fasteners, velcro, double-faced foam tape, or contact cement. Do no use rubber cement or glue. Samples which can not be adequately fastened

should be labeled so they can be identified independently.

14-2.3 Material and finish samples should indicate true pattern, color and texture. Label all finish samples with material codes used in the project submittal. Photographs or colored photocopies of materials or fabrics are not preferred. Carpet samples should be large enough to show a complete pattern or design. If the specified carpet has a large pattern, provide a color photograph showing the overall pattern in addition to the carpet sample. Color photocopies of artwork and plants are acceptable.

## 14-3 DRAWING INFORMATION REQUIREMENTS

14-3.1 **Composite Floor Plan**. The floor plan should show all panels, components and free-standing furniture in relationship to the building and the building systems. This includes information on locations of light switches, fire pull boxes, mechanical devices, and other wall mounted items. The composite floor plan should be a full size contract drawing showing furnishing item numbers (where applicable), and gross and net areas of each floor.

14-3.2. **Workstation Panel Plan**. The panel plan should include a panel symbol legend, panel placements, critical dimensions, of aisles widths, and critical dimensions tying the panels to the building's structural, electrical and mechanical systems. Panels must not block access to mechanical, electrical or fire controls. Each panel should be coded with the following system:

| PANEL | WIDTH | HEIGHT |
|---|---|---|
| N (non-powered) or P (powered) | centimeters | centimeters |

For example, a non-powered panel 610 mm (2 feet wide) and 1727 mm (five feet eight inches high) would be noted on the plan as "**N 61 172.7**".

14-3.3 **Workstation Electrical, Voice, & Data Plans**. The electrical, voice and data plans should show any panel placements, all receptacles used in each workstation, height and location of all light switches and mechanical control devices, and a symbol legend. The workstation design must be coordinated with the building's communication and mechanical engineering drawings.

14-3.4 **Furniture Systems**. In the color guide specifications on furniture systems, indicate the fabric width, fiber content, and construction method for the workstations. The vendor should be indicated on the drawings and in the color guide specifications.

14-3.5 **Workstation Types and Number Codes**. The workstations should be classified into groups of like configuration and features. Each group or type should be given a single letter code (A, B, etc.). For example, all similar reception stations might be type A and all similar offices might be type B. Each workstation should also be given a unique number code similar to a room number but separate from the building room numbering system. Every workstation should be identified on every plan with the composite code composed of the letter identifying the type and the workstation number code. For example, "A110" would indicate that workstation number 110 is a type A station.

14-3.6 **Workstation Isometric/Elevation and Inventory Drawings**. These drawings should show an elevation or isomeric of each type of workstation with a related inventory list of all the panels and components used, and the method of attachment. The inventory list should describe components generically rather than using specific part numbers.

14-3.7 **Workstation Finishes**. It is suggested that three fabric finishes be used for furniture systems: one color for panels and one for tackboards and flipper doors. A third color will be used to unify workstations used by the same organizational group.

14-3.8 **Workstation Components**. An ergonomically designed chair should be included in the

workstation. The following items are some of the typical workstation components and options that must be selected and specified.

14-3.8.1 Panels.

| | |
|---|---|
| Acoustical/non-acounstical | Powered/non-powered |

14-3.8.2. Components.

| | |
|---|---|
| Work Surfaces | Drawers |
| Shelves (with/without doors) | Files (lateral, panel hung/bins) |
| Task Lights/Special purpose | Counter tops |
| Drafting surface | Freestanding Components |

14-3.8.3. Accessories.

| | |
|---|---|
| Tackboards | Locks |
| Shelf dividers | Reader stands |
| Paper flow devices | Market/chalk boards |
| Computer turntable | Printer stand |
| Coat rack | Wire guides |
| Keyboard trays | Mouse pads |
| Wrist rest/Foot rest | Disc storage |

14-3.8.4. Signs.

| | |
|---|---|
| Organizational signs | Workstation name signs |

14-3.9 **Health, Safety, Accessibility, and Environmental Quality**. Designers must consider safety, health, disabled access, and environmental standards. Many of these concerns are regulated by code authorities and quantified by standardized testing. Designers should be aware of pertinent regulations and should cite them in the submittals.

14-3.9.1 Health and Safety Criteria. Fire safety is one of the most important aspects in any design. Designers must comply with all appropriate fire safety codes and provide for safe egress in the event of fire. Code requirements on this issue are stringent, and there are several regulations relating to flammability of interior materials and furnishings. See Section 2, Criteria References.
Designers should provide protection against injury and death from falls, chemical emissions, electronic emissions, and microbial conditions. Indoor air quality should not be compromised.

14-3.9.2 Accessibility. All designs, including signage, must comply with the American Disabilities Act (ADA) or the Uniform Federal Accessibility Standards, whichever is the most stringent. The only exceptions to this requirement are facilities which limit their access to able bodied military personnel. These facilities are described in Sections 13 through 19.

14-3.9.3 Environmental Quality. Designers must provide an environment that is comfortable, welcoming, and conducive to work. Contributing factors include ergonomically correct furniture, appropriate efficient lighting, and good acoustical control.

14-3.9.3.1 Furnishings and equipment should be comfortable, sturdy, and designed for anthropomorphic fit and stability.

14-3.9.3.2 Lighting is an important tool in shaping the ambiance of the environment. Careful consideration should be given to lighting in order to produce a comfortable environment that is easy to live and work in. Reflectance should be minimized and task lighting should provide glare-free illumination of work surfaces.

14-3.9.3.3 Provide adequate acoustical control to ensure a good working environment.

14-4 **BUILDING INTERIOR DESIGN SUBMITTAL ITEMS.** Some items that are usually included in the Building Interior Design are listed below.

| | |
|---|---|
| Carpet | Resilient Floor Coverings |
| Ceramic Tiles and Stones | Terrazzo |
| Paint | Wallcoverings |
| Wood Stains | Wall Base |
| Ceiling Tiles and Grid | Plastic Laminates |
| Solid Surfacing Materials | Built-in Casework |
| Blinds and other Window Coverings | Marker Boards and Bulletin Boards |
| Toilet Partitions | Moveable Room Dividers |
| Cubicle Curtains | Signage |
| Trim and Hardware Finishes | Decorative Light Fixtures |

14-5 **FURNISHINGS INTERIOR DESIGN SUBMITTAL ITEMS.** Some items that are usually included in the comprehensive interior design are listed below.

| | |
|---|---|
| ADP Tables/Printer Stands/Support Furnishings. | Artwork. |
| Office Furniture | Desks, Chairs, Lamps, & Accessories. |

14-5.1 **Manufacturer's Summary List**. The Manufacturer's Summary List is a list of all the manufacturers whose products are used in the FID package. For each manufacturer, provide name, address, phone number, fax number, and a point of contact.

14-5.2 **Furniture Placement Plans**. This is a plan of one room showing each furniture component in the room. There will be one Furniture Placement Plan for each room in the Composite Floor Plan that contains furniture. Furniture Placement Plans are drawn at 1:50 (1/4" = 1'-0") if possible, or at 1:100 (1/8" = 1'-0") if the room or area is very large. Each Furniture Placement Plan should include the following information:

- The job name, location and date.
- The footprint of the room.
- The furnishings.
- The room name and number.
- A Furnishing Item Number for each furnishing item.
- Quantity of each product specified for the FID.

14-5.3 **Furniture Illustration Sheets**. Provide one Furniture Illustration Sheet for each item of furniture in the FID. The Furniture Illustration Sheet should include the following information:

- The job name, location and date.
- A picture or line drawing of the product specified.
- The Furnishing Item Number which keys the product to the Composite Floor Plan and Furniture Placement Plan.
- The options specified, if any.
- Specification data on the finishes and fabric.
- Samples of the finishes and fabric.
- A comprehensive list giving all occurrences of the item, sorted by room. For instance:

| | | |
|---|---|---|
| 4 each | Room 103 | Commander |
| 2 each | Room 104 | Receptionist |

Furniture Illustration Sheets should be arranged in numerical order by furnishing item number. The furnishing item numbers should begin with 001.

14-5.4 **Artwork Placement Plans**. Artwork Placement Plan shows the spatial relationship between the furniture and the artwork in a room. There will be one Artwork Placement Plan for each room in the Composite Floor Plan that contains artwork. Assign a furnishing item number to each piece of artwork. The Artwork Placement Plan will show the artwork but it will not show the furniture item number for clarity. Artwork Placement Plans are drawn at 1:50 (1/4" = 1'-0") if possible, or at 1:100 (1/8" = 1'-0") if the room or area is very large. Each Artwork Placement Plan should include the following information:

- The job name, location and date.
- The room name and number.
- A plan of the room locating the artwork.
- An elevation of each wall containing artwork showing mounting height.
- A Furnishing Item Number for each artwork item.
- Quantity of each product specified for the FID.

14-5.5 **Artwork Illustration Sheets**. Provide one Artwork Illustration Sheet for each piece of art in the FID. The Artwork Illustration Sheet should include the following information:

- The job name, number, location and date.
- The title of the artwork and the artist's name.
- A picture of the proposed artwork. Color photos are acceptable.
- The furnishing item number, which keys the product to the Composite Floor Plan and the Artwork Placement Plan.
- Name and number of the room where artwork will be displayed.
- Quantity of each product specified for the FID.
- Name and number of the room where artwork will be displayed.
- Frame description and sample of mat colors.
- Mounting height and installation instructions.
- Specify security mounting if required.

14-5.6 **Itemized Furniture Cost Estimate**. The itemized cost estimate lists all furnishings and indicates quantities, unit costs and totals. It is organized according to UNICOR and GSA/FSC Group, Part, and Section of the FSC Schedules. The cost estimate should also include a 10% general contingency and 7% installation listed as separate line items. Estimated freight charges that are not included in the furniture cost should be listed as a separate line item.

14-5.7 **Order Data Sheets**. The Order Data Sheets provide all information necessary to order the furnishings specified in the FID. Only one item should be listed per data sheet. The sheets should be in numerical order. The Order Data Sheet should include the following information:

- A Furnishing Item.
- The job name, location and date.
- FSC Group, Part, and Section.
- GSA contract No., Special Item No. (SIN), and contract expiration date.
- Maximum Order Limitation.
- Source and manufacturer's name, ordering address, telephone number and FAX number.
- Product name.
- Product model number or National Stock Number (NSN).
- Finish name and number.

- Fabric name and number.
- Dimensions.
- Weight.
- Description (construction information, fabric content, finish application, etc.).
- Justification. (Example: These guest chairs are coordinated to match the task seating at each workstation. The size of the guest chairs is critical because of the limited space where they are to be placed. If this company is not selected, coordinate the newly proposed finishes with furniture item numbers 001, 002, and 003.)
- Item location by room number.
- Quantity per room.
- Total quantity.
- Unit Price.
- Total Price.
- Estimated freight charges, 7% of item cost. (note whether or not freight charges are included in the price of the FID item.)
- Special instructions (if any).

14-5.8 **FID Cost General Information**.

14-5.8.1 Furnishing Sources. Furniture may be obtained from three source categories: UNICOR, GSA FSC/FSG, and open market. UNICOR is the trade name for the Federal Prisons Industries Inc. (FPI), a wholly owned government corporation established in 1934. General Services Administration Federal Supply Class/Federal Supply Groups list products on GSA contract. Government contracts with private manufacturers that have a fixed price, a maximum order limitation, and fixed expiration date. Every effort should be made to use UNICOR or GSA. There may be on occasions when there is no current FSS/GSA or UNICOR resource for a furnishing requirement, or when items available on FSS/GSA contract or from UNICOR do not meet the functional requirements of the project. If the latter occurs, the Contracting Officer must submit a Request of Waiver to UNICOR. The FID designer shall assist in the waiver process by providing required information. GSA sources are not mandatory for DoD projects, but all procurement procedures must be followed as stated in the FAR, Federal Acquisition Regulations. Open market line items over $2,500 will require a justification letter. Open market line items over $25,000 will have to be solicited by bid, and solicitation documents including detailed specifications will be required. Line items under a General Service Administration (GSA) contract that exceed the maximum order limitation will also require a formal solicitation for bid.

# CHAPTER 15

## HISTORIC PRESERVATION

15-1 **DESIGN BACKGROUND.** Quad C is recognized as a historically significant group of structures, and is a contributing element in the Schofield Barracks Historic District, which is listed on the National Register of Historic Places. Every effort has been made in this design to retain the historic fabric of the buildings that constitute Quad C. Specific character-defining features and their treatment in the proposed design are discussed below.

15-2 **GUIDELINES.** Rehabilitation of Quad C and all new construction shall be consistent with The Secretary of the Interiors Standards for Rehabilitation & Illustrated Guidelines for Rehabilitating Historic Buildings, (1997). Both the exterior and the interior work will retain, repair, or replace, in-kind, all character defining features.

15-3 **DEMOLITION.** No additional or unapproved demolition work shall be proposed to any of the four buildings at Quad C. Wherever possible, additions previously constructed that are not original to the four buildings, shall be removed.

15-4 **ADDITIONS.** No new additions shall be constructed to any of the four buildings at Quad C.

15-5 **WINDOWS.** The rhythm of original window openings and window size and shape of the exterior windows shall be retained. The windows will match their original height, eliminating the blank panels and vents that exist in the existing building. New windows shall be installed in the openings to match the original windows in appearance. Real or false muntins will be installed that match the patterns in the original windows. If false muntins are used, muntins shall be installed on both sides of each window.

15-5.1 If metal window frames are utilized, window frames, finish, and color shall match those used at Quad F. Glass provided at Quad F are “All Season Commercial 5/16 tint lam (1/8 Solex, Ann, 060clr, 1/8 clear ann) with 0.62 shading coefficient, 72% visible light transmittance”. Paint finish is “Fluoro Guard Powder Coating, color #14284, Sierra Tan”. Contractor to verify all finishes and colors. All exposed surfaces of the metal should be painted. Window frame style, finish and color shall be approved by the CRM.

15-5.2 Structural glazing system should be utilized to allow the required thickness of the window sash frame to be reduced. Sash frame and muntin and mullion thickness that match the original dimensions as closely as possible should be used.

15-5.3 Window glazing shall be visibly clear, and tinting shall not be dark or reflective. Glazing shall be the same as used at Quad F, and shall be approved by the CRM.

15-5.4 Louvers used in original window openings shall be painted the same color as the window frames.

15-5.5 All hardware selected shall be of an appropriate historic style to be compatible with the original historic style windows. All hardware selections shall be approved by the CRM.

15-5.6 All existing window openings adjacent to the exterior walkways shall be almost entirely retained. The only window openings that will not be retained are where fire safety code requirements do not allow an opening adjacent to a fire exit. Here the opening shall be in-filled with a reveal so that the shape of the original opening is still apparent.

15-6 **DOORS.** All original door openings, especially those adjacent to the exterior walkways, shall be almost entirely retained. Where original door openings have been filled in, or partially in-filled to provide a

window, the opening shall be returned to a door. Doors shall match the appearance of the original doors. Where operable doors are not desired, fixed doors or a false door shall be used that has the same appearance as the original doors.

15-6.1 All hardware selected shall be of an appropriate historic style to be compatible with the original historic style doors. All hardware selections shall be approved by the CRM.

15-7 **EXTERIOR WALKWAYS.** All exterior balcony walkways on the quadrangle side of the buildings shall be kept open, and shall not be enclosed. If enclosure is absolutely unavoidable, the arched openings shall not be affected. Wherever possible, walkway areas that have previously been enclosed shall be returned to the original open layout.

15-7.1 The open breezeway at the first floor of Building 355 shall be kept open.

15-7.2 Exterior rails: Galvanized steel pipe rails will be installed to match the original rail design (see original drawings or the railings at Quad B for original rail size and style). Compliance with current code requirements for a maximum of 4" spherical clearance between rails will be accomplished with the addition of 3-inch steel pipe railing and post (typical) with 1/8-inch diameter cable pickets, and 1-1/2-inch steel pipe railing and post (typical) with 1/8-inch diameter cable pickets at the open stairwell. This will restore the basic appearance of the rails while improving safety in as unobtrusive a manner as possible. The existing concrete railings shall be retained.

15-8 **ROOF.** Where the roof structure is to be replaced, the original decorative eave soffit details shall be reconstructed and installed. Original construction drawings and historic photographs shall be consulted for the design.

15-9 **MECHANICAL AND ELECTRICAL EQUIPMENT.** To the maximum extent possible, mechanical equipment will be housed out of sight. Large utility equipment will be kept out of the quadrangle courtyard area as much as possible, and will be located to negatively impact the historic structures to the minimum extent possible.

15-9.1 Existing interior space will be utilized to house new mechanical, electrical, and communication equipment. All existing mechanical and/or electrical conduits or chases shall be removed, reduced or entirely relocated, wherever possible, to reduce visual impact to the historic character of Quad C. No chiller lines or condensate drain lines will be visible on the exterior of the building. This will be an improvement from the existing condition.

15-10 **ELEVATOR.** The new elevator shall be designed and installed to minimize visual impact to the historical character of Building 355 and to Quad C, as a whole.

15-11 **GYMNASIUM.** The gymnasium was originally used as a theater, and is one of the few areas in the four buildings that still remains in a layout similar to the original. This room shall remain as a large open space, and shall not have any enclosures or divisions constructed on the interior. The original operator's room and stair leading to it shall be retained, as well as the historic small wood windows inside the operator's room. The arched impressions, decorative moldings, and windows to the operator's room located at the gymnasium walls shall be retained. Structural analysis has indicated that the existing concrete walls require strengthening to meet current codes and standards. The RFP or DB designers shall attempt to find a solution for the strengthening of the walls in the gymnasium that will not obscure the decorative moldings at the walls. This may require ending the wall thickening below the molding, or strengthening the wall from the outside. Recommend reference to Quad F's solution for this challenge.

15-12 **PAINTING.** Exterior walls shall be entirely painted the light color of the standard paint color scheme except for the bottoms of the walls, which may be painted the darker color. The decorative frieze at the top of the building walls and the horizontal band between floor levels shall not be painted a contrasting

color, and shall be painted the same light color as the walls. Doors and door frames may be either the dark color of the base, or the medium tone color of the window frames or base trim color.

15-12.1 Painting schedule and all paint colors shall be approved by CRM.

# CHAPTER 16

## ENVIRONMENTAL REQUIREMENTS

16-1 **ENVIRONMENTAL ISSUES:** Overall environmental goal for the Whole Barracks Renewal Brigade Complex QUAD C is to provide a safe and healthy environment for residents, facility users and the installation.

16-2 In general, there are six potential environmental concerns:

1) Proper removal of asbestos building materials and deteriorated lead paint;
2) Proper disposal of barracks and administrative space demolition debris which contain asbestos and lead paint;
3) Proper handling and disposal of the PCB containing light ballast from the fluorescent light fixtures;
4) Proper disposal of excavated soil resulting from removal and disposal of possible leaking underground heating oil storage tanks associated with former boiler room activities;
5) Proper handling and disposal of mercury lamp switches.
6) Worker safety protection due to exposure during construction.

16-3 **ASBESTOS:** An asbestos survey for QUAD C has been completed. A copy of the report prepared by Soil and Land Use Technologies, Inc. is provided in the Appendix.

16-3.1 **Notification**. Under 40 CFR Part 61, Subpart M, owners of buildings and/or their Contractors are required to notify applicable State and Local agencies and/or EPA Regional Office prior to any demolitions, or renovations of “facilities” where asbestos material will be disturbed. In addition, the Asbestos National Emissions Standards for Hazardous Air Pollutants (NESHAPS) requires special removal, handling, and disposal practices to be followed during demolitions and renovations of all facilities. Contractor shall complete EPA notification form, postmarked at least 10 working days prior to the start of any demolition (including where no asbestos is present) or renovation activity that will disturb asbestos.

16-3.2 **Removal:** The selected offeror shall remove all asbestos containing material identified on project drawings for the renovation. The removal shall be in accordance with 29 CFR 1926.1101, Asbestos in Construction and Hawaii Administrative rules (HAR) Chapters 11-501 - 11-504. If additional asbestos is identified, that was not identified in the report, it shall be brought to the attention of the Government before proceeding with any action. After abatement, encapsulation shall be applied to these surfaces. Please see Asbestos Specification 13280 - Asbestos Abatement in the appendix.

16-3.3 **Disposal**. Asbestos containing building material shall be disposed of an approved Federal/State or local landfill. Please see applicable State of Hawaii Laws under Section 16.9. Please review the document, State of Hawaii Department of Health Solid and Hazardous Waste Branch Office of Solid Waste Management Disposal of Asbestos-Containing Waste Materials (Eff. January 1, 2003).” All applicable laws under this guidance must be followed.

16-4 **LEAD**: Due to the age of the facility (Quad C), it is assumed that lead is present on all painted surfaces.

16-4.1 **Removal.** The selected offeror shall remove lead in accordance with 29 CFR1926.62 and be a listed EPA certified lead firm on the EPA Region 9 website. Contractor shall remove all loose and flaking paint observed above the false ceiling and on walls, pillars that will not be demolished. Please see Specification 13281 Lead in Construction in the Appendix.

16-4.2 **Disposal**. Please review the document “State of Hawaii Department of Health Solid and Hazardous Waste Branch Office of Solid Waste Management Disposal of Lead-Based Paint Waste (eff.

January 1, 2003." Please see applicable Federal and State Laws under Section 16.9. The waste generated for Quad C is exempt from hazardous waste laws.

16-5 **PCB LIGHT BALLASTS.** The PCB Containing Ballasts in the fluorescent light fixtures must be removed prior to the disposal of the light fixture. A hazardous material survey has been conducted for Quad C. Please see Appendix for Hazardous Material Survey Report.

16-5.1 **IDENTIFICATION OF PCB LIGHT BALLASTS (CAPACITORS):**

The following guidelines should be used in identifying capacitors that contain PCB's:

- All capacitors manufactured through 1979 contain PCB's
- Capacitors manufactured after 1979 that do not contain PCBs are labeled "NO PCBs".
- If a capacitor is not labeled "NO PCBs", it is assumed to contain PCBs.

16-5.2 **Disposal Options.** Disposal of the PCB containing light ballasts is to be accomplished in accordance with 40 CFR 761, Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce, and use Prohibitions.

16-5.2.1 Subtitle D Landfills: Many small capacitors are disposed of in this manner due to low cost; however, the PCB's are not eliminated from the environment.

16-5.2.2 PCB Removal/Recycling. This option involves the removal of the four-ounce capacitor and the potting material from the ballast. This remaining materials are recycled for scrap metal. The only PCB recycling company on island is Saleesco USA, Honolulu HI and can be reached at 1-800-368-9095.

16-6 **UNDERGROUND STORAGE TANKS:** Disposal of contaminated soil resulting from the removal of underground heating oil tanks shall be sampled to determine if it is to be considered hazardous/non-hazardous or State of Hawaii Department of Health (HDOH) chemicals of concern in accordance with the Technical Guidance Manual for Underground Storage Tank Closure and Release Response. Chemicals of concern are associated with past site activities. If the soil is hazardous, it must be remediated locally or shipped to the mainland for disposal at a RCRA permitted landfill or incinerated. If the soil is non-hazardous it can be handled locally provided HDOH criteria are observed.

16-6.1 When petroleum impacted soil (discoloration and strong petroleum odor) is uncovered by the Contractor while excavating soil for the project, the Contractor shall immediately notify the Directorate of Public Works (DPW) and excavation shall stop. A representative from the Corps of Engineers, Environmental Technical Branch shall also be notified of the discovery. The Corps of Engineers technical advisor will visit the site and indicate the quantity of samples to be taken.

16-6.2 The Contractor will be requested to conduct a Site Investigation (SI) at the project site by collecting subsurface soil samples (using hydraulic direct push technique or drilling of borings) to fully delineate the vertical and horizontal extent of the contamination. Soil samples shall be analyzed in accordance with *Table 7.2 - Recommended Chemical Analysis for UST Closure and Release Response dated 9/18/92 of the Hawaii Department of Health (HDOH) Technical Guidance Manual for Underground Storage Tank Closure and Release Response (UST-TGM).* Based on the laboratory analytical, and the site's characteristics, the Contractor shall evaluate the migration pathways of the contaminant through the soil and the potential receptors of such contamination. Any required remediation of contamination shall be done under a separate action.

16-6.3 **Sampling Analysis Plan (SAP)**

16-6.3.1 The Contractor shall prepare a site specific sampling and analysis plan. The plan shall identify responsibilities and qualifications of all personnel, the Contractor's methods, equipment, procedures and

tentative schedule for conducting field work. The SAP shall contain maps showing the tentative sampling locations and rational for selecting those locations. The plan shall be reviewed by the Government before the start of field work. The plan shall include a detailed discussion of the technical approach to be used to implement the requirements for field activities, laboratory activities, and report of analytical data.

16-6.3.2 The SAP shall address chemical quality management including data quality objectives (DQOs) for on-site testing as well as laboratory testing. The SAP shall propose the process for assigning sample identification, field documentation, QA/QC samples, test methods, sample packing, chain of custody, and shipping etc. The SAP shall include provision for collecting and analyzing ten percent field QA/QC samples. The Government will designate an USACE validated laboratory for QA sample analysis.

16-6.3.3 **Test Items and Suggested Analytical Methods**

| *Analyses and Sites* | *Method* |
|---|---|
| *-Polynuclear Aromatic Hydrocarbons (PAHs)* | *8100*<br>*8310*<br>*8270C* |
| *Aromatic and Halogenated Volatile Organic Compounds (including Methyl Ethyl Ketone)* | *8021B*<br>*8260B* |
| *Lead/Cadmium* | *6000/*<br>*7000* |
| *PolyChlorinated Biphenyls (PCBs)* | *8082* |
| *TPH- Diesel/Oil Range Organics (excavated area)* | *8015B* |
| *TPH-Gasoline Range Organics* | *8015B* |
| *TCLP (stockpile)* | *TCLP* |
| *TPH- Diesel/Oil Range Organics (stockpiles)* | *8015B* |

16-6.3.4 **Site Investigation (SI) Report.** The Contractor shall prepare a SI report to be submitted after evaluation of laboratory data.

The report shall, at a minimum, include the following elements:

- Summary of work performed including but not limited to the narrative of the field work, mobilization and demobilization, site set up, analytical data and location maps were samples were taken, etc.
- Relevant Conversation Records that had impacted the SOW, project costs.
- Evaluation of potential migration pathways and receptors.
- Source of contamination and recommended course of action.

The report shall be reviewed by the USACE's Environmental Technical Branch. Should the levels exceed the regulatory clean up levels, determination of the disposal method will be discussed with the Government Environmental Technical representative and the State of Hawaii Department of Health, Hazard Evaluation & Emergency Response (HEER) Office.

16-7 **MERCURY SWITCHES.** The mercury containing switches, usually found in thermostats and silent light switches must be removed and disposed of properly prior to building demolition. Each switch may contain approximately 3,500 milligrams of mercury in a small electrical switch. The mercury may be

disposed of at a hazardous waste landfill or recycled. A hazardous material survey has been conducted for Quad C. The report is located in the Appendix.

16-8 **SAFETY.** Occupational Safety and Health Administration (OSHA) 29 CFR 1926, Safety and Health Regulations for Construction, will be followed at all times during construction for worker safety protection. Debris and soil containing fuels and hazardous construction materials are assumed to be a concern to worker health and the appropriate personnel protection equipment shall be used.

16-9 **APPLICABLE FEDERAL AND STATE LAWS AND ACTIONS.** Except as specified otherwise in the RFP, design and construction facilities shall comply with the latest editions (as of the date on the RFP) of the following. Major environmental federal/State and local guidance and regulations are listed below:

16-9.1 **Asbestos**

16-9.1.1 29 CFR 1926.1101 Asbestos in Contstruction

16-9.1.2 Hawaii Revised Statute (HRS) Chapter 342P.

16-9.1.3 Hawaii Administrative Rules (HAR), Title 11, Chapters 501 - 504.

16-9.1.4 Hawaii Administrative Rules, Title 12 Chapter 145.1, HIOSH Construction Standard, Asbestos.

16-9.1.5 Hawaii Administrative Rules, Title 16, Chapter 77, Subchapter 19, Asbestos Contractors, Department of Commerce and Consumer Affairs (DCCA)

16-9.1.6 Resource Conservation Recovery Act , Subtitle D

**16-9.2 Lead**

16.9.2.1 According to Section 403 of the Toxic Substance Control Act (TSCA), as amended, the Environmental Protection Agency (EPA) defines lead-based paint (LBP) as paint with lead levels equal to or exceeding 1.0 milligrams per square centimeter (mg/cm2) or 0.5% by weight.

16-9.2.2 The Department of Housing and Urban Development (HUD) had similarly defined lead-based paint as any paint, varnish, shellec or other coating that contains lead equal of greater than 1.0 mg/cm2 as measure by x-ray fluorescent (XRF) or laboratory analysis, or 0.5% by weight (5,000 ug/g, 5,000 ppm or 5,000 mg/kg) as measured by laboratory analysis.

16-9.2.3 In 1978, the consumer product Safety Commission (CPSC) banned the sale of residential paint containing greater than 0.06% lead (a trace amount). The CPSC also prohibited the used of such paint in residences and other areas where consumers have direct contact with painted surfaces.

16-9.2.4 The EPA policy entitled, “Update on Lead-base Paint”, dated August 2000 states that residential LBP waste is not subject to Resource Conservation & Recovery Act (RCRA) Subtitle C (federal hazardous waste) regulations. “Contractors can manage residential lead based paint waste as household waste.” Residential sources of LBP waste include, but are not limited to single-family homes, apartment buildings, row houses, **military barracks** and college dormitories.

16-9.2.5 EPA defined “residential lead-based paint waste” in a Federal Register “Proposed Rule”, October 23, 2001 (Vol. 66, No. 205). Residential lead-based paint waste is waste generated as a result of lea-based paint activities (including abatement, renovation, rehabilitation, and remodeling) in homes and other residences. The term includes, but is not limited to lead-based paint debris, chips, dust, and sludges.

The term does not include LBP waste from demolition activities.

16-9.2.6 The EPA interprets residential LBP waste to be household waste under 40 CFR 261.4(b)(1).

16-9.2.7 Hazardous waste regulations, known on the federal level as RCRA Subtitle C are enforced within the State of Hawaii Under Hawaii Revised Statutes (HRS) 342J and Hawaii Administrative rules (HAR) Title 11, Chapters 261 through 280. Chapter 11-261, HAR defines “household waste” as “any material derived from households (including single and multiple residences, hotels and motel, bunk houses, ranger stations, crew quarters, campgrounds, picnic grounds and day use recreation areas)

16-9.2.8 Solid waste regulations, are enforced within the State of Hawaii under HRS 342H and HAR Title 11, Chapters 58.1 (11-58.1), and provide broader authority to the Department of Health (DOH) than Federal regulations, known as RCRA subtitle D.

16-9.2.9 Hawaii Administrative Rules, Title 12 Chapter 148.1, HIOSH Construction Standard, Lead.

16.10 **MERCURY 7 UST**

Solid and Hazardous Disposal Act as amended by the Resource Conservation and Recovery Act, and amendments (RCRA), Public Law 94-580, Solid Waste Disposal Act. Among other items, this Act requires Federal Agencies must obtain permits for their hazardous waste treatment, storage and disposal facilities. Proper shipping papers (manifests), packaging, and labeling must be used when transporting hazardous waste. The 1984 amendments apply the requirements to persons who generate as little as 100 kilograms of hazardous waste in any month and require registration and controls on underground tanks used for storing oil and hazardous waste.

16-11 **Polychlorinated Biphenyls (PCB)**

16-11.1 Hawaii Administrative Rule (HAR) 11-273 and 40 CFR Part 273, Hazardous Waste Management Standards for Universal Waste Management.

16-11.2 Toxic Substances Control Act, Public Law 94-469, as amended. This Act requires Federal Agencies to properly manage the use and disposal of all toxic substances and management of Polychlorinated Piphenols (PCB) and items that contain PCB.

16. 12 **SAFETY AND HEALTH**

Hawaii Revised Statute, Chapter 396, Occupational Safety and Health Law.

# CHAPTER 17

# LANDSCAPE DESIGN

17.1 **OBJECTIVES**: The landscape of Quad C shall provide an aesthetically pleasing setting and a quality environment that creates a sense of place and pride for the Soldiers who will work and live in the barracks complex. The streetscape plantings of Foote Avenue and the Quad C parking lots shall integrate the various functional areas to unify the historic district of Schofield Barracks. The landscape plan shall enhance the installation's image by implementing the recommendations of the Exterior Architectural Plan and the Cultural Resources Management Plan. The plan shall conform to antiterrorist/force protection guidelines and apply the principles of sustainable design and traffic calming. The design shall promote simplicity, apply best management practices, and select appropriate materials to achieve visual quality at low to moderate maintenance costs.

17.2 **References**. The following references are available for review at the Engineering Section (Agronomy) , Directorate of Public Works, located at Building 104 3rd Floor, Wheeler Army Airfield, Oahu, Hawaii.

17.2.1 Schofield Barracks: Installation Exterior Architectural Plan (IEAP), U.S. Army Corps of Engineers, October 1`986.

17.2.2 Schofield Barracks: Cultural Resource Management Plan, U.S. Army Corps of Engineers, April 2000.

17.2.3 Streets and Sidewalks, People and Cars, The Citizen's Guide to Traffic Calming, Dan Burden, April 2000.

17.2.4 Sustainable Training Regimen for Planners, Architects, and Engineers, Department of Defense, 2000.

17.2.5 How to Save Trees During Construction, Tree City USA Bulletin No. 7, National Arbor Day Foundation.

17.2.6 Trees and Development: A Technical Guide to Preservation of Trees During Land Development, Nelda Matheny and James Clark, 1998.

17.2.7 City and County Ordinance No. 00-54, Exceptional Trees, City and County of Honolulu.

17.3 **Design Considerations**

17.3.1 Antiterrorism/Force Protection (AT/FP). The AT/FP guidance discourages landscape plantings that exceed 6 inches in height within 33 feet of a barracks building. This requirement shall result in the removal of the existing shrubs, hedgerows, groundcover, and the majority of trees growing close to the structures of the quad. New landscape plantings are allowable within the 33 feet standoff distance as long as the trees have single trunks and have upright (columnar or round-shaped) canopies. Canopies of mature trees shall not have low hanging branches and shall clear the building by 15 feet.

17.3.2 Historic Preservation Landscape Program. The large, mature trees such as monkey pods, ear pods, banyans, silk oaks, and tall Norfolk Island pines and royal palms are characteristic of the landscape of the quads and the preservation of these heritage trees is important in maintaining the ambience of the historic district. In addition, tree gaps created by earlier tree removals shall be filled in with new plantings of the same tree species to re-establish the rhythmic pattern of the streetscape. Another important feature of

the historic district is the open spaces such as the green belt along Meigs Avenue and the central court of the quad that were key elements of the original installation layout.

17.3.3 There are no Exceptional Trees protected by City and County of Honolulu ordinance in the project site.

17.3.4 Foote Avenue Corridor (Glennan Avenue to Meigs Avenue). The establishment of street trees along the length of Foote Avenue shall define this major thoroughfare and create a strong visual edge of the historic district. The Foote streetscape shall mirror the existing shade tree plantings of Waianae Avenue that borders the quads on the north. The tree plantings shall also reduce the scale of the quad building facade, calm traffic, and provide shade to the area. Hedge plantings shall screen the parking lots to visually unify the area and reinforce the integrity of the historic district. Wide walkways on both sides of this main corridor shall promote pedestrian and bicycle traffic.

17.3.5 Screens and Buffers. The use of trees, hedgerows and other landscape screening methods shall conceal unsightly areas or structures to enhance visual image.

17.3.6 Plant Selection. The landscape plants shall reinforce a tropical theme with emphasis on the use of palm trees. When possible, material selection shall reflect the orange and yellow colors of the 25$^{th}$ Infantry Division's insignia. Plant species shall be easy to maintain, locally hardy, and tolerant to the specific site conditions. The use of suitable native species is encouraged. Poisonous plants and trees that bear edible fruit, are very littersome, or have aggressive root systems shall not be utilized.

17.3.7 Sustainable Sites Design. The project shall minimize site disturbance to prevent soil erosion and to protect the existing trees and their roots. The design shall minimize off-site storm water runoff by promoting the use of pervious surfaces. The landscape design shall integrate water conservation measures by installing hardy native plants, drip irrigation systems, and mulches. The design shall apply alternative treatments to minimize lawn areas and landscape for energy conservation by planting appropriate shade trees in locations to cool adjacent streets, parking lots, walkways, and buildings.

17.3.8 Minimize Tree Conflicts. The design shall select tree species with non-aggressive root systems to minimize tree root conflicts with foundations, sidewalks, and underground utilities. Tree selection shall also fit (size and shape) the species to match the available growing space above and below ground. The design shall locate new tree plantings to avoid potential conflicts. In new planting locations and existing tree sites where root conflicts are inevitable, install treatments that will mitigate the situation.

## 17.4 LANDSCAPE MINIMUM REQUIREMENTS

17.4.1 Tree Preservation and Removal

17.4.1.1 The preliminary inventory of existing trees for the project area is shown in the attached RFP reference drawing entitled LANDSCAPE MASTER PLAN. (Note that additional existing tree inventory information will be shown on the topographic survey and will be provided to the Offeror during the advertising period.) This plan classifies each individual tree into one of three classes as indicated below:

17.4.1.2 Refer to RFP Concept Design Drawings for tree preservation and removal requirements.

17.4.1.3 Reserved.

17.4.1.4 Reserved.

17.4.1.5 Reserved.

17.4.1.6 Tree Protection Zone. No grading, compaction, or construction activity shall occur in this zone immediately surrounding a Class A tree. All underground utilities, storm drains and irrigation lines should be routed outside the tree protection zone. If utilities must traverse the tree protection zone, they shall be tunneled or bored at a depth of 4 feet or greater within the zone. For broad spreading canopy trees, the zone shall extend radially outward to 20 feet from the external surface of the trunk. For all other broadleaf type of tree species, the zone shall extend to 15 feet. For all palm trees, the zone shall extend to 10 feet. The zone shall be entirely enclosed by a temporary fence prior to any demolition work and shall remain in place until all site work and building construction are completed. The location of all Class A trees shall be identified in the offeror's Demolition Plan, Landscape Plan, Grading, and Utility Plans.

17.4.1.7 Tree Protection During Demolition and Construction

17.4.1.7.1 The Contractor shall retain the services of an arborist who has been certified for at least 5 years with experience in tree protection during construction, tree pruning and transplanting trees. The Contracting Officer shall approve the selection of the certified arborist. The arborist shall provide consulting services and perform quality assurance duties during the contract period. The arborist shall serve as the Contracto's liaison with The Outdoor Circle on matters pertaining to the protection of the trees on the project site. The arborist shall also ensure that branch and root pruning and tree relocation work are performed in accordance with standards of the National Arborist Association and the International Society of Arboriculture; proper measures are taken to protect the canopies and root systems of the trees from unnecessary damage from construction activity; when potentially damaging construction activity is performed, that such activity is performed in a manner that will minimize damage to the tree; and trees are provided with irrigation and proper care and remain in good health during the demolition and construction period.

17.4.1.7.1.2 The Contractor shall arrange a pre-construction meeting attended by the Contractor, subcontractors, Contracting Officer, DPW Agronomist, and the Contractor's certified arborist to review procedures for performing tree-related work, work in the areas of saved trees, access routes, storage areas, and measures to protect trees during construction.

17.4.1.7.1.3 Protection Fence. The Contractor shall erect a temporary fence around each saved tree such that the fence encloses the tree protection zone as a minimum (Diagram 1). The fences shall be erected prior to the commencement of any work and shall not be removed until all work that is potentially injurious to the trees is completed. If an existing structure prevents proper enclosure of the tree protection zone prior to demolition, the Contractor shall initially erect the fence around the tree to the extent that is reasonably possible. After demolition, the fence shall be reconfigured to enclose the tree protection zone. Protection fences shall not be relocated or removed without the written permission of the arborist.

17.4.7.1.4 Limitation of Construction Activities under Existing Tree Canopies. The Contractor shall limit activities under the canopy of existing trees to only those activities explicitly required to complete the construction under and/or adjacent to the tree's canopy as shown and specified. All excavation work required under the canopy of the tree shall be performed under the direction of the arborist. Material and topsoil stock piling, vehicle parking, temporary roadways, construction material mixing, portable latrine, and field office will not be allowed under the canopy. Spoils, waste, and washout water shall not be deposited or stored, either temporarily or permanently, under the canopy.

17.4.1.7.1.5 Tree Pruning. A certified tree worker under the general supervision of a certified arborist shall perform the tree pruning and root pruning work.

17.4.1.7.1.6 If injury should occur to any tree during construction, the Contractor shall immediately report the injury to the certified arborist. The certified arborist shall evaluate the injury and apply appropriate treatments. The Contractor shall submit a written report of the tree injury and treatment to the Contracting Officer.

17.4.1.7.1.7 Tree Maintenance. The Contractor shall irrigate the trees as necessary to maintain their health during the course of the demolition and construction period. Groundcover growth within the fenced-in area shall be maintained at a height not to exceed 250 mm (10 in). The application of herbicides is prohibited under the canopy of the trees.

17.4.1.7.1.8 Root Pruning. Before grading, pad preparation, or excavation for foundations, footings, walls, or trenching, prune roots that are greater than two (2) inches in diameter by manually digging a trench and cutting exposed roots with a saw, vibrating knife, rock saw, narrow trencher with sharp blade, or other approved root pruning equipment. Any roots damaged during grading or construction shall be exposed to sound tissue and cut cleanly with a saw.

17.4.1.7.1.9 If temporary haul or access roads must pass over the root area of trees, a roadbed of 6 inches of mulch or gravel shall be created to protect the soil. The roadbed material shall be replenished as necessary to maintain a 6-inch depth.

17.4.2 New Tree Plantings for Restoration. Provide Silk Oak (Grevillea robusta) trees to fill in gaps in the street lawns bordering parking areas on the west-side of Flagler Avenue, the north-side of Foote Avenue, and the west-side of Meigs Avenue.

17.4.3 Landscape Building 355 Front Entrance on Waianae Avenue. Provide landscaping to enhance and accentuate the entryway of the building.

17.4.4 Quadrangle C Signage. Provide lighted signage to identify “Quadrangle C”. Also, indicate its year of construction “Est. 1915". The sign architecture shall be compatible with the character of building 355. Minimum sign size 2.5 feet x 4 feet excluding base. Lettering shall be pin mounted. Place sign in an appropriate location along Waianae Avenue. Provide landscaping to accentuate signage.

17.4.5 Landscape Front Entryway Courtyards of Buildings 356, 357, and 358. Design an entrance space to the buildings that will accommodate and direct pedestrian traffic and create an atmosphere for socializing. Place more emphasis on the development of the center entryways and less on the side courtyards. As a minimum requirement, provide an informal grouping of a single-trunk type of palm species for the center entryways of each building. Each planting group shall consist of a minimum of 3 specimens. The same design shall be applied to the 3 buildings.

17.4.6 Foote Avenue Corridor Streetscape. Plant a minimum of 8 royal palm specimens in the street lawn fronting Foote on the south side of the parking lot west of building 356. The height of furnished palms shall match the 2 existing royal palms in the lawn. Provide a hedgerow to screen the parking lot with an allowance of 2 feet of car overhang into the planter strip.

17.4.7 Quad C Interior Court. Provide a minimum of 10 medium-sized canopy shade trees around the perimeter of the court that will complement the existing African Tulip tree located in the north corner. The tree species shall not be Kukui or Formosa Koa which are planted in the courts of the other quads.

17.4.8 Landscape Memorial. The memorial plaque is located at the east entry into the quad complex on Waianae Avenue. Provide paved sidewalk with a minimum width of 5 feet from the curbing to the plaque. Provide plantings to define and accentuate the memorial.

17.4.9 Screen Plantings. Provide plantings to screen unwanted views of trash enclosures, utility pad mounts, etc. that are outside of the AT/FP standoff zone of 33 feet from buildings.

17.4.10 Turf Plantings.

17.4.10.1 St. Augustine (*Stenotaphrum secundatum*): Establish grass around building 355, in center and side courtyards of buildings 356, 357, and 358 and in all other areas where sunlight conditions do not favor common bermuda grass growth.

17.4.10.2 Common Bermuda (*Cynodon dactylon*): Establish grass in the central court of the quad complex and in all other turf areas within the project site not planted with St. Augustine. Disturbed ground areas outside of the project area shall also be re-established with bermuda grass.

17.4.11 Tree Planting Material Requirements

17.4.11.1 Palm species: field stock, trunk height 10-20 feet, trunk unmarked with a diameter measurement not less than 6 inches along any point of the trunk. Specimens in a group planting shall have staggered heights. Suitable palm species are Alexander (Archontophoenix Alexandra), Joannis (Veitchia joannis), Fiji (Pritchardia pacifica), Princess (Dictyosperma album), Foxtail (Wodyetia bifurcata), Queen (Syagrus romanzoffianum), and Black (Normanbya normanbyi).

17.4.11.2 Medium-sized canopied shade tree (species not identified): pot size 25 gallons, trunk caliper not less than 2 inches, height not less than 8 feet.

17.4.12 Quality of Planting Material. All plant material furnished shall have a habit of growth that is normal for the species and shall be healthy and free from disease, insects and injuries. Trees and shrubs shall have well developed branching with vigorous root systems. Roots must fill containers, but show no evidence of being or having been root bound. Trunks shall be reasonably straight and symmetrical with crown and have a persistent main leader. Trees shall not be Apoled@ or the leader removed. Any tree or shrub with a weak, thin trunk not capable of supporting itself when planted in the open will be rejected. Plants shall equal or exceed measurements specified in the planting plan, which will be the minimum acceptable sizes after pruning. If any plant specified is not obtainable, submit a written substitution presenting either a different size of the same species or a similar alternate species. Substitutions of plant materials will not be permitted unless authorized.

17.4.13 Imported Screened Topsoil. New topsoil at a minimum of 6 inches deep shall be furnished for the newly planted areas in the front and side courtyards of buildings 650, 651, and 652. The topsoil shall be fertile, friable of loamy character, and amended with humus or composted organic material. The soil shall have passed through a 6.4 mm screen. The topsoil shall be free of weed seeds, other viable plant material such as nutgrass, stones, and other deleterious substances.

17.4.14 On-Site Topsoil. Except for the areas identified in paragraph above, all areas shall use the saved topsoil from the site. Soil tests shall be performed for pH, chemical analysis and mechanical analysis to establish the quantities and type of soil amendments required for the type and variety of plant material specified. The saved topsoil shall be amended per recommendations of the soil test. If the stored site=s topsoil is not sufficient to cover the landscaping needs, additional topsoil shall be provided by the contractor from an approved off site source.

17.4.15 Root Barriers. Root barriers shall be provided for new plantings of the broadleaf trees in the parking lots and streetscapes. In addition, provide root barriers for saved broadleaf trees located close to the pavements and foundations. Barriers shall be woven fabric, minimum 19.5 inches in width, with integral chemical nodules. Linear type of application method of the root barrier shall be used rather than encircling the tree root ball.

17.4.16 Landscape Edging. Bed dividers shall be provided to separate shrub beds, tree wells, and mulch treatments. Plastic header shall be flexible, resin-formulated edging 5.25 inches high and have a 1.12 inch diameter bead; designed with ribbed sides and a t-shaped bottom; heavy duty grade construction; and sun guarded, carbon black for UV protection.

17.4.17 Mulch Applications. Organic and/or inorganic mulch treatments shall be provided in shrub beds, planter wells, and in appropriate areas where it can serve as a cost-effective alternative to turf groundcover. As a minimum, organic mulch material shall be stable, fully composted green waste; gray to dark brown; no odor; ph 7-8; 80% of the material shall pass through a screen of 3 inches or smaller; and free of viable weed seeds, litter, and deleterious material.

17.4.18 Percolation Test. Test for percolation shall be performed to determine positive drainage of plant pits and beds. All soil and drainage conditions detrimental to the growth of plant materials shall be identified and a proposal correcting the conditions shall be submitted.

17.4.19 Installation of Plant Material. For tree pits in parking lots, minimum size of planting hole shall be 5 feet by 5 feet by 3 feet deep. Remove existing pavement, base course, and sub-base course and backfill with topsoil and compact to 70% of maximum density. When obstructions below ground or poor drainage affect the planting operation, proposed adjustments to plant location, type of plant and planting method or drainage correction shall be submitted. For all other plan pits, excavate and backfill as recommended by the trade and ANSI Z60.1.

17.4.20 Maintenance During Planting Operation. Installed plants shall be maintained in a healthy growing condition. Maintenance operations shall begin immediately after each plant is installed and shall continue until the plant establishment period commences.

17.4.21 Maintenance During Establishment Period.

17.4.21.1 The maintenance period shall begin upon written acceptance of the planting operations and continue for 365 days thereafter. During this period, provide plants with optimum growing conditions and maintain the appearance of the planted areas.

17.4.21.2 The maintenance of plants shall include, but no limited to, straightening plants, tightening stakes and guying material, repairing tree wrap, protecting plant areas from erosion, maintaining erosion material, supplementing mulch, removing dead or excessive growth by pruning, maintaining edging of beds, checking for girdling of plants, watering, fertilizing, weeding, insects and diseases pest control, removing and replacing unhealthy plants and unsatisfactory turf areas, mowing turf, and removing plant and litter debris.

17.4.21.4 Restricted use pesticides shall not be utilized. All pesticide applications, regardless of pesticide application, shall be performed or supervised by personnel that are certified by the State of Hawaii to apply pesticides in the Ornamental Plants and Turf category.

17.4.22 Automatic Irrigation System.

17.4.22.1 Provide permanent fully automatic irrigation systems for the landscape and turf areas surrounding buildings 355, 356, 357, and 358; the central court of the quad; and the street lawn of the Quad C parking lot along Foote Avenue, Meigs Avenue, and Waianae Avenue.

17.4.22.2 A computer based controller(s) shall be provided with rain sensors. For the quad court, install Hunter I-40 rotor Pop-up with check valve and stainless steel riser (or equivalent) irrigation heads with triple-swing joint connection to the lateral.

17.4.22.3 Place main lines a minimum of 18 inches and laterals 12 inches below finished grade. Place pipes and electrical wiring crossing pavement at least 18 inches below finish grade at sidewalks and 2 feet below finish grade at roadways. Install electrical wiring below irrigation pipes for protection. Provide appropriately sized sleeves for all pipes going under sidewalks and roads.

17.4.23 Reserved.

17.4.24 Disposal of green waste material shall be outside the limits of Government property, and shall be the contractor=s responsibility. The contractor may at his option dispose of trees and shrubs by chipping the green waste and applying the material as a mulch layer 100 to 150 mm (4 to 6 in.) thick over bare ground surfaces of training grounds at Schofield Barracks to control soil erosion. The Director of Public Works, Schofield Barracks, will determine the location of the disposal site.

17.4.25 Warranty.

17.4.25.1 Furnished plant materials shall be guaranteed to be in a vigorous growing until completion of the maintenance period. Plants that decline or die during the warranty period shall be replaced using the same kind and size as originally planted. The warranty shall also apply to existing trees on the job site that are either saved in place or relocated (transplanted).

17.4.25.2 Furnished irrigation system shall be guaranteed to be in full operation during the maintenance period. Material and equipment found to be defective due to faulty material or workmanship shall be immediately repaired or replaced. The contractor is responsible for damage caused by the irrigation system during the installation or the warranty period due to failure of workmanship or materials.

## B. PLUMBING:

### General

The plumbing system will consist of domestic hot and cold water, sanitary sewer [drain, waste and vent (DWV)] and gas piping systems; new fixtures and related equipment.

Domestic Water System

Domestic water will be piped to the central mechanical plant at Quad C via a 6” (150 mm) main. Static water pressure of 47 psig, measured at the site by the fire protection engineer, is deemed to be insufficient for flush valve operation in office buildings however all water closets in the modules will be of the flush tank style to minimize noise. As a result, cold water will be boosted in pressure prior to supplying fixtures and equipment including gas fired water heaters for domestic and kitchen hot water systems. The water heating system will be housed in the central mechanical plant. An aboveground reduced pressure backflow preventer will be placed in the water supply.

Sanitary Sewage System

Sanitary waste will discharge to the site sanitary piping system. Greasy waste from the kitchen and dishwashing room will flow through 5,000 gal (18,925 L) grease interceptors prior to entering the site sanitary system. The criteria used to size the grease interceptor

is based on the Uniform Plumbing Code recommended sizing procedures in lieu of the City and County of Honolulu grease interceptor sizing standard. This criteria was chosen since it is based on actual flow. The City and County method is on based on fixture units only which will result in a smaller grease interceptor. Undersized grease interceptors will require frequent pumping and maintenance. Wastewater from the elevator pit will discharge directly into a holding tank in the elevator machine room where it will be serviced by elevator maintenance personnel.

Gas System

The existing gas piping serving Quad C originates from two existing 8,000 gallon tanks located near Building 472. The Design Build team shall coordinate with the Gas Company for locations of gas regulators, gas demand for each regulator and gas piping routing.

Plumbing Fixtures

All fixtures, faucets and flush valves will be of the water conservation type. Only fixtures in the battalion HQ and dining facility will be handicapped accessible in accordance with ADAAG. All other fixtures will not be of the accessible type. Exterior hose bibbs will be provided in limited quantities. Interior hose bibbs will be provided in restrooms.

Plumbing Requirements for Central Plant and Fire Pump Buildings

Floor drains, floor sinks and hose bibbs will be provided the Central Plant and Fire Pump Buildings.

**Hot Water System**

The hot water generating and storage system consists of two (2) heat pump units with circulating hot water pumps, two (2) gas fired, finned copper-tube instantaneous type water heaters with pumps, two (2) storage tanks and two (2) building hot water recirculating pumps. Heat pump units will extract heat from returning chilled water prior to the chillers and preheat domestic water in the hot water storage tanks. The gas heaters will provide the final boost in temperature to 140°F (60 °C). Hot water will be generated and stored at 140°F (60 °C) and tempered or boosted to satisfy specific temperature requirements at various fixtures and equipment.

Hot water in the kitchen and dining facility will be tempered to 100 °F (37.8°C) for hand sinks and lavatories in the employee toilets. 140°F (60°C) hot water will be supplied to the food preparation, vegetable preparation and pots and pans sinks in main kitchen. 180°F (82.2°C) hot water will also be supplied to the dishwashers, pots and pans rinse sinks and hose bibbs at the field feeding equipment room. An in-line electric booster heater will increase the temperature to 180°F (82.2°C) in these areas.

Hot water will be tempered to 100°F (37.8°C) at service sinks, showers, lavatories and kitchen sinks in the billeting and company operation areas. Shower valves will be of the

pressure balanced type with temperature setpoint capability to minimize the potential for scalding.

**Piping**

Water piping will be Type K, hard drawn copper for underground installations and Type L, hard drawn copper for above ground areas. Fittings for copper tubing will be cast bronze or copper with soldered ends using tin-antimony solder since lead solder is not permitted. Hot water piping will be insulated. Aboveground exterior insulation and underground insulation will be factory pre-insulated or insulated with cellular glass type insulation. Interior insulation will be rigid fiberglass with vapor barrier wrap.

Drainage, waste and vent (DWV) piping will be service weight cast iron with hub and spigot DWV fittings for underground installations and no-hub cast iron with hubless fittings for aboveground installations.

## C. AIR CONDITIONING:

**General**

The air conditioned areas include:

1. Offices
2. Classrooms
3. Conference rooms
4. Learning centers
5. Dining rooms
6. Kitchen
7. Dishwashing room
8. Game rooms
9. Modules (living units)
10. Interior corridors (buildings 356 & 358)
11. Arms vaults
12. Equipment maintenance areas
13. Communication storage rooms
14. Telecommunications rooms
15. Mechanical equipment rooms with microprocessor based controllers.
16. Lounges

The following rooms will not be air conditioned but will be mechanically ventilated:

1. Electrical rooms
2. Laundry rooms
3. Toilet and restrooms
4. Janitors closets

5. Unit storage rooms
6. NBC storage rooms
7. TA-50 rooms
8. Kitchen dry storage
9. Central mechanical plant building
10. Dining facility compressor room

The following rooms will not be air conditioned nor mechanically ventilated:

1. Fire control rooms
2. General storage rooms
3. Can wash room
4. Pulper room

The air conditioning system will not be on the emergency power circuit.

A temporary 150 ton air cooled packaged chiller, chilled water pump and piping will be provided for Building 355 since it will be occupied during a portion of the construction period until such time that it is vacated for renovation.

**Design Conditions**

All air conditioned spaces will be designed to provide 75°F (23.9°C) [+/-2°F (1.1°C)] room temperature with relative humidity at 50% +/-5%RH. Kitchens and dishwashing areas will be cooled to 85°F (29.4°C) [+/-2°F (1.1°C)] room temperature. Humidity control will not be provided in the kitchen and dishwashing areas.

Outdoor air requirements will be based on ASHRAE 62-1999 and will be 30 cfm (15 L/s) per room for bedrooms and living rooms, 20 cfm (10 L/s) per person in office areas, 15 cfm (7.50 L/s) per person in waiting rooms, 0.05 cfm/sf (0.25 L/s/sm) in corridors, and 0.25 L/s/sm (0.05 cfm/sf) in storage areas. Outdoor air will be supplied at a rate that makes up for toilet exhaust and maintains positive pressure in conditioned spaces.

Cooling loads will be based on weather data for Schofield Barracks, Hawaii as follows:

2.5% Summer Dry Bulb Temperature = 85°F (29.4°C)
Mean Coincident Wet Bulb Temperature = 74°F (23.3°C)
Prevailing Wind Direction = East

**HVAC Equipment and System**

Quad C will be cooled by two (2) nominal 200 ton water cooled chillers with each unit sized to handle roughly 50% of the peak cooling capacity. Two (2) chilled water pumps (one for each chiller) will distribute chilled water to air handling units in each building via insulated copper tubing for pipe sizes 4” (100 mm) and smaller and carbon steel pipe for pipe sizes larger than 4” (100 mm). Two (2) condenser water pumps (one for each

chiller) will circulate cooling water between the chillers and the cooling towers. A 100% back-up system was deemed to be unnecessary. The new cooling towers will be located in the existing cooling tower enclosure. The chillers, pumps, heat recovery and domestic hot water boilers and storage tanks will be located in a central plant building near the cooling tower for physical protection.

Exterior underground and aboveground chilled water piping will be factory pre-insulated and covered with PVC jacketing or insulated with cellular glass with PVC jacketing. Interior aboveground chilled water piping will be insulated with fiberglass insulation.

The chillers will be of the screw type to optimize operating efficiency. Low ozone depleting potential refrigerants will be specified.

The chilled and condenser water pumps will be of the constant volume type. Pumps and motors will be standard coupled and mounted on factory provided bent base frames on housekeeping pads. Check valves will be of the "non-slam" type. Three-way valves will be provided at the air handling units.

The cooling towers will be stainless steel or fiberglass types with variable speed or 2-speed fans.

The battalion headquarters spaces and the soldier community areas including the office spaces, conference rooms and open office areas will be cooled by a variable air volume (VAV) air conditioning system using multiple AHU's serving the various zones. The floor mounted AHU's will be located in mechanical rooms for ease of maintenance and repair. The Arms Vaults will be air conditioned by chilled water, ceiling suspended VAV fan coil units (FCU). The Communication Storage rooms will be air conditioned by chilled water, ceiling suspended CAV FCU's.

The company operation administration spaces including offices, conference rooms and open office areas will be air conditioned by CAV systems with multiple floor mounted AHU's serving various zones. The Arms Vaults will be air conditioned by a chilled water, ceiling suspended VAV fan coil unit (FCU) during occupied periods and dehumidified with a packaged, off-the-shelf desiccant dehumidifier during unoccupied periods. The Communication Storage rooms will be air conditioned by chilled water, ceiling suspended CAV FCU's.

The dining and kitchen facilities will be air conditioned by CAV AHU's. AHU's will be floor mounted and located in mechanical rooms. The organizational training areas in

Building 357 will be air conditioned by a VAV system. The office areas in Building 357 will be air conditioned by a CAV system.

The billeting modules will be air conditioned by central station chilled water air handling units with VAV boxes serving each living unit in order to dehumidify outdoor air and provide proper temperature control in each unit. Interior corridors, game rooms, and lounges in Buildings 356 and 358 will be air conditioned by central station AHU's with VAV boxes.

Integral horsepower motors for pumps and fans will be of the premium efficiency type.

**Peak Loads**

The estimated peak cooling loads for the buildings are as follows:

Building 355

Cooling : 60 Tons (211.0 KW)

Building 356

Cooling : 84 Tons (295.3 KW)

Building 357

Cooling : 142 Tons (499.4 KW)

Building 358

Cooling : 84 Tons (295.3 KW)

Total: 370 Tons (1,301 KW)

Use 400 Tons (1,406.4 KW) to allow for margin of safety.

**Air Distribution System**

The air distribution system will consist of VAV and CAV systems. Floor mounted AHU's and ceiling suspended FCU's will be utilized.

The AHU's will be modular, central station type, with insulated, double-walled construction and a solid inner wall for improved indoor air quality. VAV AHU's will be

equipped with solid state variable frequency drives (VFD) and isolation transformers. All AHU's will will be equipped with ultraviolet "C" (UV-C) lights to aid in keeping the coils free of mold and mildew.

All ductwork will be galvanized sheet metal, constructed in accordance with the Sheet Metal & Air Conditioning Contractor's National Association, Inc. (SMACNA) Duct Construction Standards and insulated with a minimum of 2" (50 mm) thick exterior foil faced, fiberglass duct wrap for improved indoor air quality (exterior insulation permits duct cleaning).

Air intakes will be located 10' above grade to comply with AT/FP requirements.

**Temperature Controls**

A direct digital control (DDC) system will control and monitor the air conditioning, ventilation and domestic hot water system. The DDC system will control the chillers, pumps, cooling towers, air handling units, control valves, water heaters and provide equipment diagnostics. Strategies such as chilled water temperature reset, leaving supply air temperature reset, and schedule optimization may be programmed into the DDC system to optimize and refine the air conditioning system operation to provide the necessary cooling with a minimum expenditure of energy.

The DDC system will be BACnet compatible to enable future tie-in to a base wide DDC system.

The master controller will be located in the central plant while the user interface panel or personal computer will be located in one of the offices.

The DDC system will allow central shut down of the air distribution system as required by ATFP Guidelines.

All equipment will tie into it respective individual controller to permit stand alone operation in the case of failure of the master controller.

<u>VAV Control</u>

Microprocessor-based, wall mounted thermostats will measure space temperature and regulate their respective VAV box serving that space. Each thermostat will be provided with user adjustable occupied and unoccupied period setpoints. The 3-way chilled water valve in the air handling unit will modulate to maintain a supply air temperature of 55°F (12.8°C). The VAV boxes will modulate air flow to the space to maintain the desired room setpoint temperature.

<u>CAV Control</u>

A microprocessor-based, wall mounted thermostat will measure space temperature and modulate the 3-way chilled water valves at the air handling units to maintain a return air temperature of 75°F (23.9°C). Fan coil units will be provided with 2-position 3-way chilled water valves. The thermostat will be provided with user adjustable occupied and unoccupied period setpoints.

## D. VENTILATION/EXHAUST:

### Administrative and Office Areas

Restrooms and janitor closets within the administrative and office areas will be ventilated by transferring air from adjacent air conditioned areas and exhausting by ceiling mounted cabinet exhaust fans through the roof. The exhaust fans will be interlocked with their respective air handling unit to remove excess air.

### Electrical and Storage Rooms

The electrical rooms and storage areas will be ventilated by introducing outside air through wall louvers and exhausting by cabinet fans through exterior walls or roof.

### Mechanical Rooms

Mechanical rooms will be ventilated by transferring air from adjacent air conditioned areas. Excess air will be exfiltrated through exterior walls or door louvers.

### Dining Facility

Kitchen exhaust hoods with a hot water washdown and chemical fire protection system will be provided over grease generating and heat producing equipment. Pre-conditioned makeup air will be provided by floor mounted central station air handling units to cool the individual spaces. Dishwashing room will be ventilated by ceiling mounted cabinet exhaust fans. Steam exhaust hoods will be provided over dishwashers, pot and pan washers and pots and pans sinks. Exhaust air will be ducted through the upper floors and through the roof of the building. Air curtain fly-control units will be installed over personnel entrance and exit doors into the dining and kitchen areas.

### Dining Facility Compressor Room

Room housing the compressors for the walk-in reefers will be ventilated by transferring air from adjacent areas and exhausted by cabinet fans through exterior walls. Ventilation shall comply with ASHRAE 15-2001 in the event of a refrigerant leak.

### Billeting Modules

Bathrooms in the modules will be ventilated by transferring air from adjacent rooms and exhausting through ceiling centrifugal exhaust fans through the roof. A residential style kitchen hood will be provided over the cook tops and exhausted through the roof. Penetrations into vertical duct shafts will be protected with fire dampers. Clothes dryer exhaust will be ducted to the exterior and assisted by exhaust fans to comply with ETL 1110-3-483. Laundry areas will be ventilated by transferring air from adjacent air conditioned areas. Laundry areas and janitor closets will be exhausted to the exterior via cabinet fans.

**Central Mechanical Plant Building**

Central mechanical plant building will be ventilated by introducing outside air through wall louvers and exhausting through exterior wall mounted exhaust fans. Ventilation shall comply with ASHRAE 15-2001 in the event of a refrigerant leak.

# COOLING LOAD CALCULATIONS

# Cooling Load Summary

Building 355

First Floor: 23 Tons (80.8 KW)
Second Floor: 19 Tons (66.8 KW)
Third Floor: 18 Tons (63.3 KW)

Total: 60 Tons (211.0 KW)

Building 356

First Floor: 28 Tons (98.4 KW)
Second Floor: 28 Tons (98.4 KW)
Third Floor: 28 Tons (101.9 KW)

Total: 84 Tons (295.3 KW)

Building 357

First Floor: 50 Tons (175.8 KW)
Second Floor: 18 Tons (63.3 KW)
Third Floor: 38 Tons (133.6 KW)

Total: 142 Tons (499.4 KW)

Building 358

First Floor: 28 Tons (98.4 KW)
Second Floor: 28 Tons (98.4 KW)
Third Floor: 28 Tons (101.9 KW)

Total: 84 Tons (295.3 KW)

Grand Total: 370 Tons (1,301.0 KW)

# VAC EQUIPMENT SELECTION

# CHILLER

# Product Data

# 30HXA076-271
# 30HXC076-271
# Condenserless and Fluid-Cooled Chillers
# 50/60 Hz

75 to 265 Tons (264 to 931 kW)

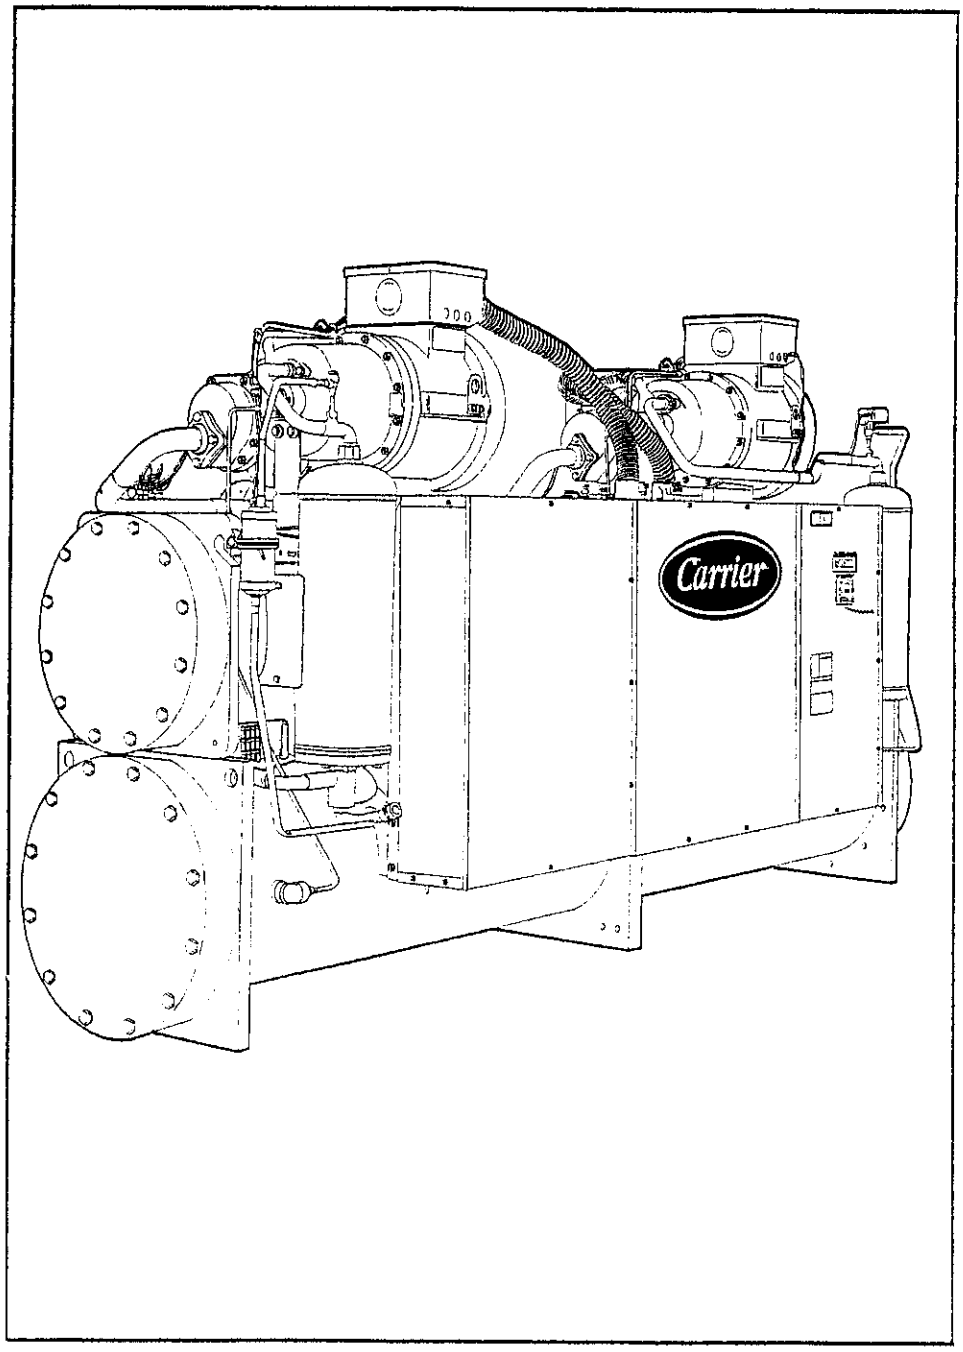
***Quality Assurance***

Carrier Corporation UL REGISTERED FIRM ISO 9002 #A2280

BSI REGISTERED FIRM

Certificate No FM 21837

**Approvals:**
ISO 9002
EN 29002
BS5750 PART 2
ANSI/ASQC Q92



Fluid-cooled and condenserless chillers designed from the ground up to meet the needs of today and tomorrow, including:

- Fits through a standard door with no disassembly required
- Chlorine-free HFC-134a refrigerant
- Dual circuit independent refrigerant
- Smooth compression using twin screw compressors
- ARI certified efficiencies to .53 kW/ton

# Features/Benefits

## Quality design and construction make the 30HXC (Fluid Cooled) and the 30HXA (Condenserless) units the preferred choice

### Easy installation

The 30HX chiller has a compact design that fits through a standard door opening and requires minimal indoor space. The 30HX chiller is delivered as a complete package for easy installation. There are no extra controls, clocks, starters, or other items to install.

The 30HX unit also provides a single location electrical power entrance (using the accessory field-installed control transformer) and quick, easy piping using either welded or accessory victaulic-type clamp-on couplings for the cooler.

The 30HX 208/230-v, 230-v, 460-v and 575-v units are designed in accordance with UL (Underwriters' Laboratory, U.S.A.) and CSA (Canadian Standards Association) standards to minimize electrical inspection time.

Copyright 2000 Carrier Corporation

A quick start-up is assured once installation is complete, since each 30HX unit is manufactured at an ISO 9002-listed manufacturing facility to guarantee quality. In addition, all 30HXC units are tested under load at the factory to provide reliable start-up.

## Easy operation

The 30HX units have a quiet, low-vibration design featuring screw compressors.

Efficiency levels of the 30HX units exceed minimums established by ASHRAE (American Society of Heating and Refrigeration Engineers) and CSA for both full- and part-load operation, thus saving on operating costs through lower electrical costs. All 30HX units are also rated in accordance with ARI (Air Conditioning and Refrigeration Institute, U.S.A.) standards. The 60 Hz 30HXC units are ARI certified.

The 30HX controls are fully automatic. The leaving-fluid temperature is directly controlled, and the entering-fluid temperature is continuously monitored to detect load and flow changes controlling to within .5° F (.3° C).

Dual, independent refrigerant circuits provide reliable, dependable cooling, and the 30HX units use medium-pressure HFC-134a refrigerant to minimize stress on the compressors and ensure a long life.

From a service standpoint, the 30HX units offer the following features:

- Use of HFC-134a refrigerant, which has no planned phase-out in its future
- Mechanically-cleanable cooler and condenser (30HXC units)
- Twin-screw compressors, which require no routine service or maintenance
- Easily accessed service information includes suction and discharge pressure and temperature using standard Navigator™ display module

SAE — Society of Automotive Engineers

* Charges listed are for 30HXC units. The 30HXA units are shipped with a holding charge only. To determine the refrigerant charge requirements for 30HXA units see the System Refrigerant Charge table in the Application Data on page 26.
† Only on units with factory-installed suction service valves.

## 30HXC206-271

NOTES:
1. OPERATING WEIGHT INCLUDES WEIGHT OF WATER AND REFRIGERANT.
2. ◐ DENOTES CENTER OF GRAVITY.
3. — DENOTES ACCESSORY OR FACTORY INSTALLED OPTION.
4. DIMENSIONS ARE IN INCHES (MM) AND WEIGHTS ARE IN LB (KG).
5. 36 IN. (914.4) RECOMMENDED SERVICE CLEARANCE AROUND MACHINE.

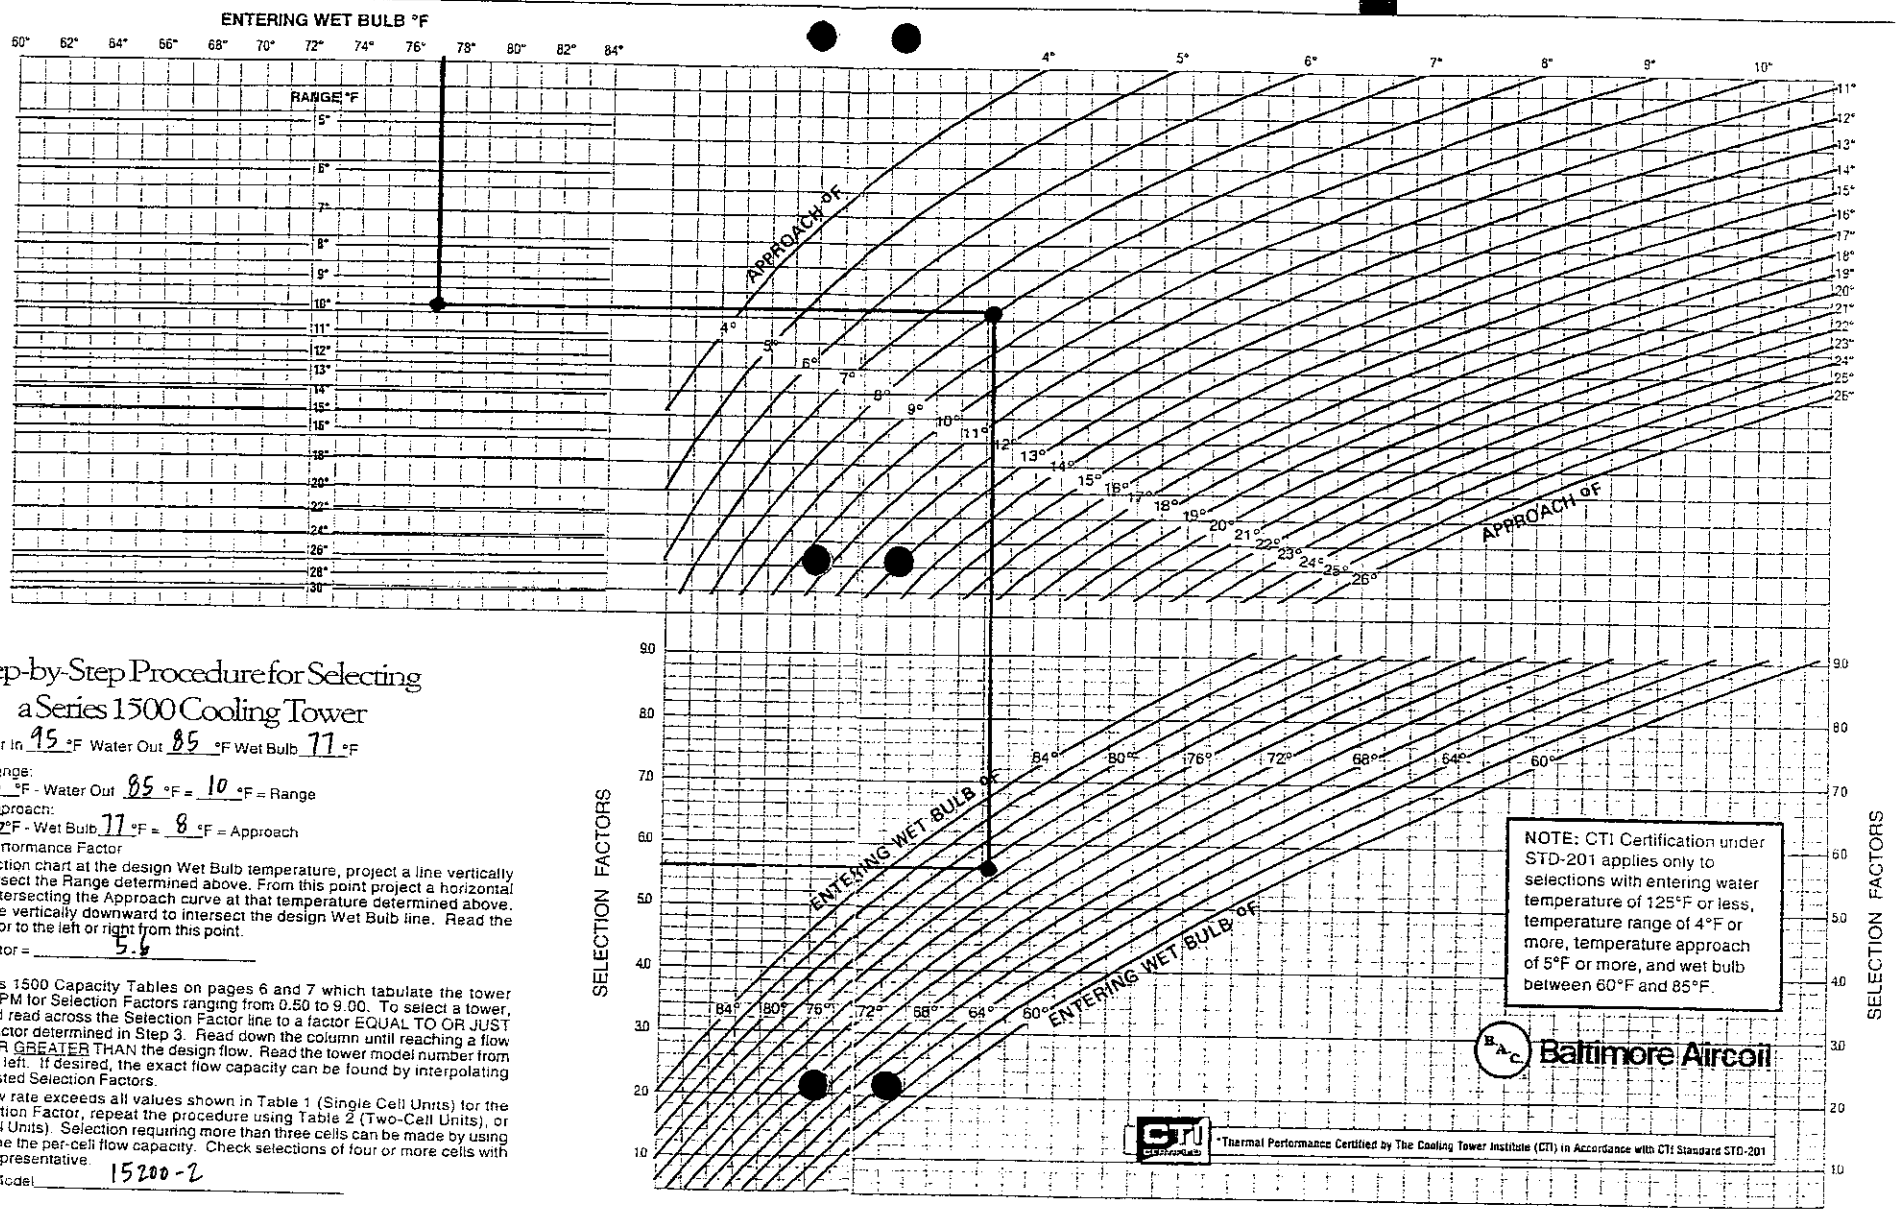
# SERIES 1500 SELECTION CHART



## Step-by-Step Procedure for Selecting a Series 1500 Cooling Tower

GPM 1200 Water In 95 °F Water Out 85 °F Wet Bulb 77 °F

1. Determine Range:
   Water In 95 °F - Water Out 85 °F = 10 °F = Range
2. Determine Approach:
   Water Out 85 °F - Wet Bulb 77 °F = 8 °F = Approach
3. Determine Performance Factor

Entering the selection chart at the design Wet Bulb temperature, project a line vertically downward to intersect the Range determined above. From this point project a horizontal line to the right intersecting the Approach curve at that temperature determined above. Then project a line vertically downward to intersect the design Wet Bulb line. Read the Performance Factor to the left or right from this point.

Selection Factor = 5.6

4. Select Unit

Turn to the Series 1500 Capacity Tables on pages 6 and 7 which tabulate the tower capacities in USGPM for Selection Factors ranging from 0.50 to 9.00. To select a tower, enter the table and read across the Selection Factor line to a factor EQUAL TO OR JUST LESS THAN the factor determined in Step 3. Read down the column until reaching a flow rate EQUAL TO OR GREATER THAN the design flow. Read the tower model number from the column on the left. If desired, the exact flow capacity can be found by interpolating directly between listed Selection Factors.

If the required flow rate exceeds all values shown in Table 1 (Single Cell Units) for the appropriate Selection Factor, repeat the procedure using Table 2 (Two-Cell Units), or Table 3 (Three-Cell Units). Selection requiring more than three cells can be made by using Table 1 to determine the per-cell flow capacity. Check selections of four or more cells with the local B.A.C. Representative.

Final Selection Is Model 15200-2

## Notes

1. Nominal tons are defined as 3 gpm of water per ton, cooled from 95° F to 85° F with a 78° F entering wet bulb. Unless otherwise indicated, all connections 3" and smaller are MPT. Connections 4" and larger are beveled for welding and mechanically grooved.
2. The actual size of the inlet and outlet connections will vary with the design flow rate. Consult unit print for certified dimensions.
3. The heaviest section for all models except 15214-2 through 15282-2 is the upper section.

# Greenheck

JOB: QUAD C

10/23/2002

## Kitchen Ventilation

MARK: EF1

# SWB Backward Inclined Centrifugal Utility Fan

### ENGINEERING DATA

| Appro. Fan Weight (lb.) | Max. T Motor Frame Size |
|---|---|
| 1,170 | 286 |

| Drive Type |
|---|
| Variable |

### CONFIGURATION

| Arrangement | Rotation | Discharge Position |
|---|---|---|
| 10 | CW | UB |

### INSTALLATION

| Air Stream Temp. (°F) |
|---|
| 85 |

### STANDARD CONSTRUCTION FEATURES

HOUSING: Heavy gauge steel housing with Lock-seam construction • Unit support angles with prepunched mounting holes • Adjustable motor plate • Corrosion resistant fasteners • Entire unit is phosphatized and coated.

BEARINGS, SHAFT, AND WHEEL: Heavy duty lubricatable, self-aligning ball bearing pillow blocks • Polished, solid steel shafts • Backward inclined fan wheel (Fans with EXP. motors include: aluminum wheel, aluminum rub ring, and shaft seal)

### SELECTED OPTIONS & ACCESSORIES

Permatector - Standard Coating on Entire Fan
Steel Wheel Construction
Two Groove Pulley and Belt System

### MOTOR SPECS

| Size (hp.) | RPM | V/C/P | Enclosure | Motor Frame Size |
|---|---|---|---|---|
| 20 | 1725 | 208/60/3 | ODP | 256 |

### PERFORMANCE

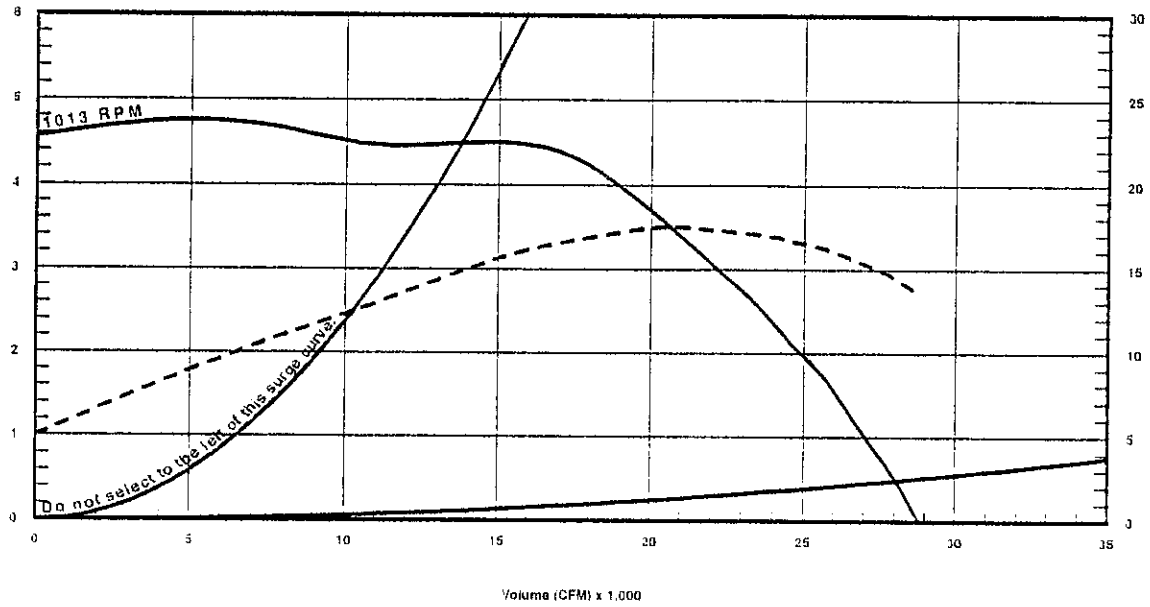
Elevation ft. = 0 Drive Loss (%)

| Qty. | Model | Volume (CFM) | SP (in. wg) | CSP (in. wg) | TS (ft./min) | OV (ft./min) | FRPM | Operating Power (hp.) | SE % |
|---|---|---|---|---|---|---|---|---|---|
| 1 | SWB-236-200 | 28,000 | 0.5 | 0.5 | 9,680.0 | 3,794.0 | 1,013 | 14.41 | 15 |

### SOUND

| Inlet Sound Power by Octave Band | | | | | | | | LwA | dBA | Noise Criteria |
|---|---|---|---|---|---|---|---|---|---|---|
| 62.5 | 125 | 250 | 500 | 1000 | 2000 | 4000 | 8000 | | | |
| 94 | 96 | 96 | 92 | 89 | 86 | 80 | 73 | 95 | 84 | 79 |

LwA - A weighted sound power level, based on ANSI S1.4. dBA - A weighted sound pressure level, based on 11.5 dB attenuation per octave band at 5.0 ft. Noise Criteria (NC) based on an average attenuation of 11.5 dB per octave band at 5.0 ft.



amca CERTIFIED RATINGS AIR PERFORMANCE AIR MOVEMENT AND CONTROL ASSOCIATION INTERNATIONAL, INC.

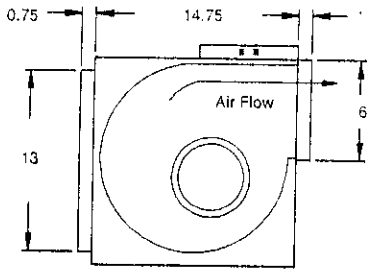
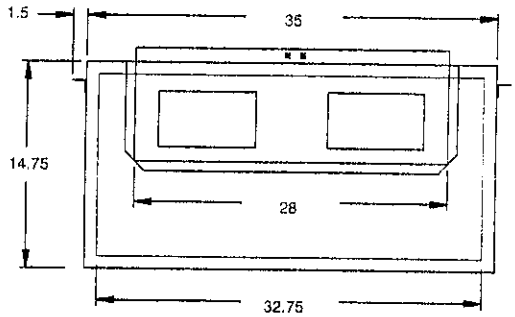
**JOB:** QUAD C

## Fan and Ventilator

**MARK:** EF2





** Optional Discharge Position

NOTES: All dimensions shown are in units of inches

Fan weight is without accessories

# CSP Inline Cabinet Fan

### CONSTRUCTION FEATURES

• Galvanized steel housing • Sound absorbing insulation • Outlet duct collar with integral backdraft damper • Forward curved wheel • Plug type disconnect • Adjustable mounting brackets • Square duct connection • Dual scroll design • Field rotatable discharge

### SELECTED OPTIONS & ACCESSORIES

Motor w/ Thermal Overloads
UL/cUL-507 - "Electric Fans"
Solid State Speed Control - 10WSSC, Shipped Loose

### DIMENSIONS

| Appro. Fan Weight (lb.) |
|---|
| 68 |

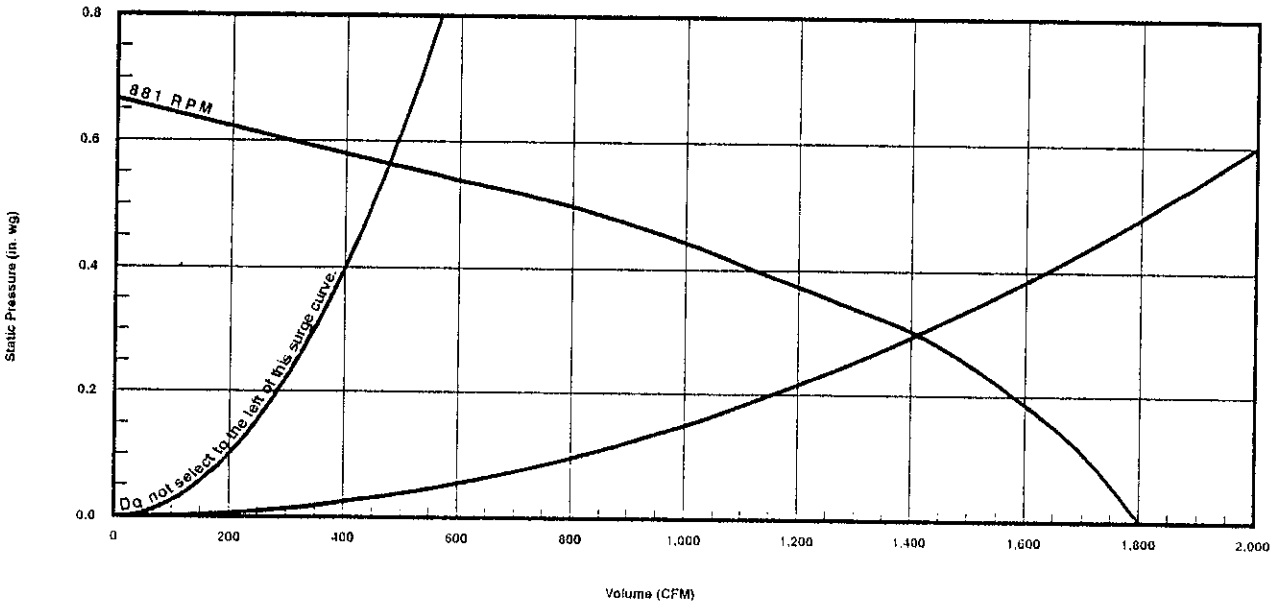
### PERFORMANCE (Elevation ft. = 0, Airstream Temperature °F = 80)

| Qty | Model | Volume (CFM) | SP (in. wg) | FRPM | Input Operating Power (W) | Motor Information | | |
|---|---|---|---|---|---|---|---|---|
| | | | | | | V/C/P | Enclosure | RPM |
| 1 | CSP-275 | 1,400 | 0.3 | 881 | 735 | 115/60/1 | ODP | 1100 |

### SOUND

| Inlet Sound Power by Octave Band | | | | | | | | Lwa | dBA | Sones |
|---|---|---|---|---|---|---|---|---|---|---|
| 62.5 | 125 | 250 | 500 | 1000 | 2000 | 4000 | 8000 | | | |
| 69 | 70 | 63 | 56 | 53 | 45 | 45 | 41 | 60 | 49 | 5.3 |

LwA - A weighted sound power level, based on ANSI S1.4.
dBA - A weighted sound pressure level, based on 11.5 dB attenuation per octave band at 5.0 ft. Sones calculated using AMCA 301 at 5.0 ft.



amca CERTIFIED RATINGS SOUND AND AIR PERFORMANCE AIR MOVEMENT AND CONTROL ASSOCIATION INTERNATIONAL, INC.

**ADJUSTMENT FOR INCREASING STORAGE CAPACITY & REDUCING RECOVERY**

AVAILABLE HOT WATER CAN BE CALCULATED FROM THE FOLLOWING FORMULA:

Qt = R + M x S / d

WHERE:

Qt = AVAILABLE HOT WATER, GPH (mL/s)
R = RECOVERY RATE AT THE REQUIRED TEMP, GPH (mL/s)
M = RATIO OF USABLE WATER TO STORAGE TANK CAPACITY
St = STORAGE CAPACITY OF THE HEATER TANK, GAL (L)
d = DURATION OF PEAK HOT WATER DEMAND, HOURS
Vt = REQUIRED AVAILABLE HOT WATER FOR PEAK, GAL (L)
Vt = Qt x d

CALCULATING REQUIRED RECOVERY RATE BASED ON Vt AND THE DESIRED STORAGE TANK VOLUME:

R = (Vt / d) - (M x St / d)

| SOLVING: | | | |
|---|---|---|---|
| ENTER M = | 0.75 | ASSUME 75% | |
| ENTER St = | 4,200.00 | GALLONS | 15,918.00 LITERS |
| ENTER d = | 1 | HOURS | |
| Vt = | 3,903.86 | GALLONS | 14,795.61 LITERS |
| R = | 753.86 | GPH | 791.55 mL/s |

CALCULATING REQUIRED HEAT INPUT:

Qin = 8.34 lb/gal x R x (To - Ti)

WHERE:

Qin = REQUIRED HEAT INPUT, BTUH (KW)
R = RECOVERY RATE AT THE REQUIRED TEMP, GPH (mL/s)
To = LEAVING TANK WATER TEMPERATURE, F (C)
Ti = ENTERING TANK WATER TEMPERATURE, F (C)

| SOLVING: | | | |
|---|---|---|---|
| R = | 753.86 | GPH | 791.55 mL/s |
| ENTER To = | 140.00 | F | 60.00 C |
| ENTER Ti = | 40.00 | F | 4.44 C |
| Qin = | 628,715.90 | BTUH | 184.21 KW |

# TYPE N

FINNED COPPERTUBE
INSTANTANEOUS DIRECT FIRED
HOT WATER SUPPLY BOILERS

JOB: _____

ENGINEER: _____

CONTRACTOR: _____

PREPARED BY: _____ DATE: _____

_____ MBH INPUT

MODEL _____

**INDOOR**

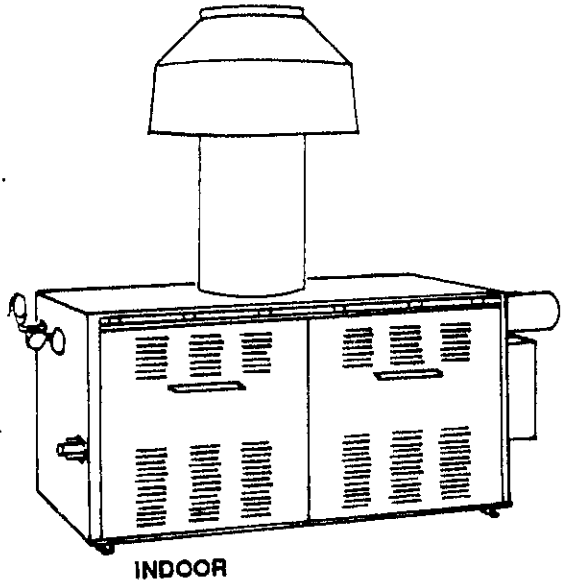
**EFFICIENT**
Thermal efficiency 82%. Highest of any atmospheric boiler available today.

**THERMAL SHOCK PROOF**
20-year warranty against thermal shock damage up to 150°F. differential. Maximum operating temperature: 230°F.

**LIGHT WEIGHT**
A floor load to 70 lbs/sq. ft. or less.

**HIGH RECOVERY**
Cuts fuel costs substantially because the standby and radiation losses normal to other boilers are eliminated.

**LOW WATER OPERATING TEMPERATURE**
Operates with water temperature as low as 105°F. without condensation.



**INDOOR**

## STANDARD EQUIPMENT

**HEAT EXCHANGER**
- ASME Inspected and Stamped 160 PSIG
- National Board Approved
- Bronze Headers
- Finned Copper Tubes
- ASME Steel Tubesheet
- Silicon O-Rings
- 125 PSIG ASME Pressure Relief Valve
- Temperature and Pressure Gauge

**CONTROL**
- 115V, 60 Hz, 1 Ph Power Supply
- 115V/24V Transformer
- 100% Pilot Shutofff/Lockout
- Pilot: Electronic, Intermittent Ignition (I.I.D.)
- High Limit Control
- On/Off Switch
- Operating Limit Control
- Flow Switch

**GAS CONTROL TRAIN**
- Manual Main Gas Shut-off Cock
- Main Gas Pressure Regulator
- Safety Shut-off Valve, Redundant
  - Control Valve
  - Modulating Firing Mode
  - AGA Design Certified. ANSI Z21.13 Requirements.

**CONSTRUCTION**
- Draft Diverter: Stack Type
- Front Controls: Enclosed
- Bolted Cabinet
- Stainless Steel Burners
- Polytuf Powder Coat Finish
- Integral Pump

## OPTIONAL EQUIPMENT

**CONSTRUCTION**
- ☐ Combustible Floor Shield

**HEAT EXCHANGER**
- ☐ Right Hand Connections
- ☐ _____

**CONTROLS**
- ☐ _____

**REGULATORY AGENCY**
- ☐ I.R.I., Industrial Risk Insurers Requirements
- ☐ F.M., Factory Mutual Insurance Requirements
- ☐ _____

BACK TO BUILT TO ORDER TANKS

## WATER TANKS
## TECHNICAL SPECIFICATIONS

These Hanson lined potable hot water storage tanks are built a tested in accordance with the A.S.M.E. Boiler and Pressu Vessel Code Section IV Division II for potable hot water stora tanks and bear the "HLW" stamp, and serial number, nation board number as required. A copy of the A.S.M.E. data she HLW-6, signed by an A.S.M.E. authorized inspector, will be se with the invoice if requested at time of order.

Standard exterior paint system is power buff to SSPC-SP3 pl one coat 2/3 MIL DFT rust resistant primer. Standard interi finish is fired porcelain enamel, aka "GLASS".

All tappings and flange openings are plugged and covered befo shipment. Manway covers are installed for shipping only, a must be adjusted and tightened before the tank is pressurized.

Sacrificial magnesium alloy anodes are shipped loose with glass lined tanks for installation at the jobsite. These must checked periodically in service and replaced if necessary protect the tank lining.

The A.S.M.E. name plate and the supplied lift lugs are installed allow clearance for tank insulation, which is available at ext cost.

Water storage tanks are guaranteed free from defects in mater and workmanship for one year from the date of shipment, FC our factory. Full limited warranty terms are available on request.

# GREASE INTERCEPTOR

PROJECT: QUAD C

PROJECT NO.: 02030
DATE: 28-Oct-02
BY: STT
STATUS: Preliminary

**DISHWASHING GREASE INTERCEPTOR SIZING FORMULA (UPC-APPENDIX H)**

M x F x T x S = Interceptor Size (Liquid Capacity in Gallons)

Where: M = Meals served at peak hour

F = Waste flow rate
- 6 Gallon flow (with dishwashing machine)
- 5 Gallon flow (without dishwashing machine)
- 2 Gallon flow (single service kitchen)
- 1 Gallon flow (food waste disposer)

T = Retention time
- 2.5 Hours (commercial kitchen waste, dishwasher)
- 1.5 Hours (single service kitchen, single service)

S = Storage factor
- 1 Fully equipped commercial kitchen (8-hr operation)
- 2 Fully equipped commercial kitchen (16-hr operation)
- 3 Fully equipped commercial kitchen (24-hr operation)
- 1.5 Single service kitchen

| | | | |
|---|---|---|---|
| Therefore | | 150 | Meals served at peak hour[1] |
| | x | 6 | Waste flow rate |
| | x | 2.5 | Retention time |
| | x | 2 | Storage factor |
| | | 4,500 | Interceptor Size (Liquid Capacity in Gallons) |

Design Selection: 5000 gallon pre-cast concrete grease interceptor

[1]Meal Count is Based on the Following:

Peak Meals Per Meal Period = 300

Allocate 50% of Meals to Dishwashing GT and 50% to Kitchen GT
Meals served per GT = 300 x 0.5 = 150

B. General

Quad C is a group of four, three-story buildings. Building 355 contains a gymnasium, storage areas, and administrative areas; Buildings 356 and 358 contain barracks; and Building 357 contains a dining facility, storage areas, and administrative areas. The total area of Building 355 is approximately 6,160sqm, Buildings 356 and 358 are approximately 6,808sqm each, and Building 357 is approximately 6,910sqm. The project is to completely renovate these four buildings to current building and life safety codes, including new underground utilities, fire suppression systems and fire alarm systems.

C. Construction and Occupancy

All four buildings are Type II-A structures. All structural components, floor construction, bearing walls, and the roof shall be constructed of one-hour fire resistive construction.

The IBC occupancy classification for the quad is as follows. Buildings 356 and 358 are both a Group R-2 occupancy. Building 355 is a mixed occupancy with Group A-3, Group B, and Group S-1 uses. Building 357 is also a mixed occupancy with Group A-2, Group A-3, Group B, and Group S-1 uses.

The NFPA 101 classification for the quad is: Buildings 356 and 358 are both New Apartment Building occupancies. Building 355 is a mixed occupancy with New Assembly,

New Business, and Storage occupancies. Building 357 is also mixed a occupancy with New Assembly, New Business, and Storage occupancies.

D. Allowable Floor Areas and Height

The tabular floor area for a Group A-2, or A-3 occupancy of Type II-A construction is 1,440 square meters. The tabular floor area for a Group B Occupancy of Type II-A construction is 3,484 square meters. The tabular floor area for a Group R-2 Occupancy of Type II-A construction occupancy is 2,230 square meters. The tabular floor area for a Group S-1 Occupancy of Type II-A construction is 2,415.5 square meters.

Building frontage on four sides of the building and fire sprinklers are used to increase the tabular floor area and building height. Since Buildings 355 and 357 contain mixed occupancy uses, the non-separated use option of Section 302.3.2 will be utilized in calculating the allowable floor area for these two buildings. Buildings 356 and 358 will also use the non-separated use option of Section 302.3.2 to determine the allowable area for the buildings.

The A-2 Occupancy has the most restrictive tabular area requirements for Buildings 355 and 357 and is used to calculate the allowable area modifications. Building 356 and 358 will be calculated using the tabular floor area of 2,230 square meters.

Allowable Area Modifications:

| | |
|---|---|
| 200% increase for fire sprinklers | (IBC section 506.3) |
| Percentage increase for frontage | (IBC section 506.2 as calculated below using Equation 5-2) |
| $I_f = 100[(F/P) - 0.25](W/9.14)$ | (Equation 5-2) |

Where:

$I_f$ = Area increase due to frontage (percent)
F = Building perimeter which fronts a public way or open space having 6.1 meters open minimum width (259 meters)
P = Perimeter of entire building (259 meters)
W = Minimum width of public way or open space

Total Allowable Area:

$A_a = A_t + (A_t\ I_f / 100) + (A_t\ I_s / 100)$

Where:

$A_a$ = Allowable area per floor
$A_t$ = Tabular floor area
$I_f$ = Area increase due to frontage (percent)
$I_s$ = Area increase due to sprinkler protection (percent)

Building 355

$A_a$ = 1,440 + (1,440 x 75/100) + (1,440 x 200/100)

$A_a$ = 5,400 square meters

$A_a$ can be multiplied by three to determine the maximum floor area. The maximum floor area for Building 355 is 16,200 square meters.

Using the same method, the allowable areas and maximum floor areas of the remaining buildings are:

Building 357 (P = 339 meters, F = 303 meters, W = 3 meters)

$I_f$ = 21.1

$A_a$ = 1,440 + (1,440 x 21.1/100) + (1,440 x 200/100)

$A_a$ = 4,623.8 square meters

The maximum floor area for Building 357 is = $A_a$ x 3 = 13,871.4 square meters

Building 356 and 358 (P = 303 meters, F = 303 meters, W=9.14 meters)

$I_f$ = 75

$A_a$ = 2,230 + (2,230 x 75/100) + (2,230 x 200/100)

$A_a$ = 8362.5 square meters

The maximum floor area for Buildings 356 and 358 is = $A_a$ x 3 = 25,087.5 square meters. All buildings are within the allowable area requirements of the IBC.

Allowable Height Modifications

The maximum building height for A-2, A-3, B, R-2 and S-1 occupancies in a Type IIA building is 19.8 meters per IBC Table 503. The building height is permitted an increase of one story and 6.1 meters due to the installation of automatic fire sprinklers per IBC section 504. The maximum number of stories permitted is 4 stories for the A-2 and A-3 occupancies, 6 stories for the B occupancies, and 5 stories for the R-2 and S-1

occupancies. All of the buildings are within the allowable height requirements of the IBC.

E. Separation of Structures

The primary exposures of the buildings in the quad are:

Building 355

North Exposure: The north side of the building is Waianae Avenue. The nearest structures are Building 301 and 314 located 38 meters away.

South Exposure: The south side of the building is the open courtyard of the quad. The nearest structures are the additions to Buildings 356 and 358 located 31 meters away.

East Exposure: The east side of the building is a one of the controlled access points into the quad, and beyond that is the fire pump house and chiller enclosure. The nearest structure is the fire pump house located 41 meters away.

West Exposure: The west side of the building is Flagler Road. Also located to the west is a parking lot for the building. The nearest structure is Building 361 located 38 meters away.

Building 356

North Exposure: The north side of the building is Waianae Avenue. The nearest structure is Building 315 located 70 meters away.

South Exposure: The south side of the building is Foote Avenue. The nearest structure is Building 360 located 44 meters away.

East Exposure: The east side of the building is the open courtyard of the quad. The nearest structure is the addition to Buildings 357 located 20 meters away.

West Exposure: The west side of the building is Flagler Road. Also located to the west is a parking lot for the building. The nearest structure is Building 361 located 14 meters away.

Building 357

North Exposure: The north side of the building is the open courtyard of the quad. The nearest structures are the additions to Buildings 357. These additions are located 3 meters away.

South Exposure: The south side of the building is Foote Avenue. The nearest structure is Building 360 located 22 meters away.

East Exposure: The east side of the building is the primary parking lot for the building. The nearest structure is Building 256 located 120 meters away.

West Exposure: The west side of the building is Flagler Road. Also located to the west is a parking lot for the building. The nearest structure is Building 450 located 195 meters away.

Building 358

North Exposure: The north side of the building is Waianae Avenue. The nearest structure is Building 300 located 69 meters away.

South Exposure: The south side of the building is Foote Avenue. The nearest structure is Building 372 located 122 meters away.

East Exposure: The east side of the building is the primary parking lot for the building. The nearest structure is Building 256 located 96 meters away.

West Exposure: The west side of the building is the open courtyard of the quad. The nearest structure is the additions to Buildings 357 located 21 meters away.

F. Exterior Wall and Opening Protection

Per MIL-HDBK-1008C, fire resistant ratings of exterior walls shall be by the building code. Per IBC, Table 602, for Type II-A construction for all occupancies listed in Section C, the fire resistance of exteriors walls shall be of one-hour fire resistive construction if the separation distance is $\geq$ 1.5 meters, but < 9.14 meters. If the separation distance is greater than 9.14 meters, there is no fire resistance construction requirement.

There are three walls on the additions to Building 357 that create an exposure to the main building on the first floor. The south wall of the men's bathroom, the south wall of the large electrical room that opens towards the dining area, and the south wall of the large electrical room and compactor room that open towards the can washing area are within the 1.5 to 9.14 meter distance. These walls create an exposure, and shall be of one-hour fire resistive construction, and the openings in these walls shall be protected by 3/4-hour rated assemblies. The remaining exposures for the quad exceed 9.14 meters and therefore do not require any fire resistance rating.

Cornices, and eave overhangs shall be of noncombustible construction.

G. Fire Walls, Fire Partitions, and Smoke Partitions

Though the allowable area calculations were based on a non-separated use, barriers are still required by other codes and standards. Protection from hazardous areas as defined by NFPA 101, Chapters 12, 30 and 38 is required. In a New Assembly or New Apartment Building occupancies, laundries, and maintenance shops, including woodworking and painting areas shall be separated from the remainder of the building by one-hour fire resistive construction and sprinkler systems as specified in NFPA 101 Section 8.4. Since the structures shall be fully sprinklered, the corridors of Buildings 356 and 358 that provide exit access shall be of minimum 1/2-hour fire resistive construction in accordance with NFPA 101, Chapter 30 New Apartment Building occupancies.

All vertical openings through the floors of the building shall be enclosed within shafts of one-hour rated fire resistive construction when penetrating three floors or less. The elevator machine room is connected to the elevator shaft. All openings shall be sealed to meet the one-hour fire resistance rating, or the machine room shall be of one-hour fire resistive construction in accordance with ASME A17-1.

Floor to floor smoke barriers shall be in accordance with NFPA 101, Chapter 8.

H. Means of Egress

The means of egress shall be in accordance with NFPA 101 including Chapters 12, 30, 38, and 42, and ADAAG, and in no case shall there be less than two means of egress from any structure. Where there is a mixed occupancy, the criteria from the most restrictive occupancy shall apply. The hazard classification per NFPA 101 is ordinary hazard for all four buildings. NFPA 101 requires no designated area of refuge since the buildings are fully sprinklered, however the New Assembly occupancies still require two accessible rooms for egress requirements. Only able-bodied military personnel inhabit Buildings 356 and 358 and therefore the accessibility requirements do not apply to these buildings. The arms vaults are also exempt from accessibility requirements.

I. Fire Sprinkler Protection Criteria

All four buildings and the new fire pump building will require the installation of new sprinkler systems in accordance with MIL-HDBK-1008C, NFPA 13, and NFPA 101.

The sprinkler system design for the first floor of Building 355 and the kitchen area of Building 357 will be a design density of 6.11 lpm/sm over 279 square meters with quick response sprinklers and a hose allowance of 1,892.5 lpm. The sprinkler system for the elevator pit and elevator machine room in Building 355 will be a design density of 8.15 lpm/sm over the entire area with standard response intermediate temperature sprinklers and a hose allowance of 1,892.5 lpm. Any room designated storage; supply, or mechanical shall be designed to a design density of 8.15 lpm/sm. The storage rooms shall not exceed a storage height of 12 feet.

The sprinkler system design for the first floor dining area of Building 357, and second and third floors of Buildings 355 and 357 will be a design density of 4.07 lpm/sm over 279 square meters with quick response sprinklers and a hose allowance of 946.3 lpm. Any room designated storage; supply, or mechanical shall be designed to a design density of 8.15 lpm/sm. The storage rooms shall not exceed a storage height of 12 feet.

The sprinkler system design for Buildings 356 and 358 will be a design density of 4.07 lpm/sm over 279 square meters with quick response sprinklers and a hose allowance of 946.3 lpm. Any room designated storage; supply, or mechanical shall be designed to a design density of 8.15 lpm/sm. The storage rooms shall not exceed a storage height of 12 feet.

The sprinkler system for the new fire pump building will be a design density of 8.15 lpm/sm over the entire area with standard response intermediate temperature sprinklers and a hose allowance of 1,892.5 lpm.

J. Fire Pump

The water distribution system is unable to provide adequate pressure for the proper operation of the fire sprinkler systems. A fire pump, installed in accordance with NFPA 20, is necessary to boost the water supply pressure for the fire sprinkler systems. A diesel fire pump rated at 1,893 lpm @ 655 kPa (500 gpm @ 95 psi) will be required to provide the minimum sprinkler system demand. The new fire pump is located in a new standalone structure between Buildings 355 and 356.

K. Water Supply

A new 200 mm underground main will be installed around the interior perimeter of Quad C in accordance with NFPA 24 to supply the fire sprinkler systems for the four buildings. The new 200 mm supply main connects to an existing 450 mm main installed along Waianae Avenue. Water flow tests were performed at fire hydrants FH-C-1 and FH-C-2 on Waianae Avenue on 12 April 2002. Static and residual pressures were measured using fire hydrant FH-C-1. The results of the test are:

| | | |
|---|---|---|
| Static Pressure: | 324.1 kPa | (47 psi) |
| Residual Pressure: | 268.9 kPa | (39 psi) |
| Flow: | 2,878.2 lpm | (760.5 gpm) |
| Flow at 137.9 kPa (20 psi): | 5,551.5 lpm | (1,466.6 gpm) |

L. Fire Alarm System

A new multiplex/addressable programmable analog fire alarm system will be required for all four buildings. Initiation devices consist of manual fire alarm pull stations, duct smoke detectors, smoke detectors, and heat detectors. Smoke detectors will be required in the

elevator machine room, in each elevator lobby, and by the fire alarm control panels. Heat detectors may be used in lieu of smoke detectors by the fire alarm control panels when conditions warrant. Smoke detectors with sounder bases will be required in all dwelling units. Heat detectors will be required in the elevator machine room and in the elevator pit adjacent to each sprinkler head, but will be used only for elevator recall (see Attachment #1). The fire alarm system will supervise detection devices, manual fire alarm pull stations, audiovisual devices, water flow switches, tamper switches, fire pump status conditions, and the rangehood suppression system alarm contacts. Audiovisual notification devices will be required in the corridors and common use areas of the buildings. Attachment #1 contains the fire alarm matrix that shall be included in the design of the fire alarm system.

M. Range Top Fire Suppression Systems

The new cook tops located in the dwelling units will not be required to be protected by a range top suppression system in accordance with MIL-HDBK-1008C.

N. Rangehood Fire Suppression System

The rangehoods in the kitchen in Building 357 are required to be protected by a wet chemical fire suppression system in accordance with NFPA 17A, NFPA 96 and MIL-HDBK-1008C.

O. Emergency Lights and Exit Signs

New emergency and exit lighting is required throughout the buildings to provide lighting in event of primary power loss and to clearly indicate the means of egress. The emergency and exit lighting shall comply with NFPA 70 and NFPA 101.

P. Portable Fire Extinguishers

Portable fire extinguishers are required per MIL-HDBK-1008C. 4A:60B:C multi-purpose dry chemical portable fire extinguishers are recommended. The size and placement of fire extinguisher cabinets will be required to comply with NFPA 10.

Q. Antiterrorism/Force Protection

Implementation of UFC 4-101-01 DoD Minimum Antiterrorism Standards For Buildings, 31 July 2002 to bring an entire building into compliance is mandatory for all DoD building renovations, modifications, repairs, and restorations where those costs exceed 50% of the replacement cost of the building. Where the 50% threshold is not met, compliance with the standard is recommended.

Though the cost of the renovation of these buildings is not expected to be greater than 50% of the replacement value, UFC 4-101-01 will be implemented in this project.

The buildings are considered inhabited structures with a personnel density greater than 1 occupant per 40 square meters. The total occupant load exceeds 50 people per structure making them primary gathering buildings. With the implementation of UFC 4-101-01, a mass notification system is required for each building.

EXCAVATION PERMIT

# EXCAVATION PERMIT
## U.S. ARMY GARRISON, HAWAII
November 2001

Date Prepared:_____

1. General Information (To be completed by contractor/unit):

   a. Contractor/Unit: _____
   b. Phone No.: _____
   c. Installation/Loc. of Excavation:_____
   d. Project Title:_____
   e. Contract Number:_____

2. Telephone, Cable, Communication, Gas, Utility Coordination:

The Contractor/Unit shall verify and coordinate all underground utilities prior to any excavation work with the following maintenance and service departments. Maintenance or service department must sign on approval line or attach document verifying that they reviewed and agree to excavation as noted above.

a. AT&T (HITS), 3375 Kuapaka Street Suite D120. Terry Robinson, 837-1498.

Remarks:_____
Approve: _____ Disapprove: _____ Date: _____

b. Verizon Hawaii, Permit Section. 3239 Ualena St, 3rd Floor. 840-1444 (LeighAnn). (Note: Provide copy of construction drawings and permit)

Remarks:_____
_____
Approve: _____ Disapprove: _____ Date: _____

c. Oceanic Cable, Engineering and Construction Div. 200 Akamainui St. (Mililani Tech Park). 625-8570. (Bus. Hrs: Mon.-Fri. 0800-1430 hrs.)

Remarks:_____
_____
Approve: _____ Disapprove: _____ Date: _____

d. Sprint, SB Building T697 McCornack Rd. (Field Office). Robert Holguin,674-4511. (Note: Valid for Schofield Barracks only)

Remarks:_____
_____
Approve: _____ Disapprove: _____ Date: _____

e. Infrastructure Management System (Telephone, Data/LAN). EMC, OSPG, Bldg S-220, Room 14, FS. 438-7352 (Charlie). (Complete A, B, C, and D first)

Remarks:_____

_____

Approve: _____ Disapprove: _____ Date: _____

f. BHP Gas Company, Locating Utility Services. 515 Kamakee St. 594-5575. (Note: Provide copy of construction drawings and permit)

Remarks:_____

_____

Approve: _____ Disapprove: _____ Date: _____

3. Directorate of Public Works. Engineering Division. WAAF 113.

The Contractor/Unit shall perform a general site survey and locate all utilities within the effected area prior to any excavation. The contractor/unit shall verify that there are no known existing utilities in question for the affected area by using current utility drawings and toning. All utilities that are not shown on the plans, but have been located in the field shall be shown on the construction as-built drawings. The contractor shall verify that all water, sewer, electrical, and drainage utilities have been identified. If any questions arise, the contractor/unit shall contact the undersigned.

The equipment operator shall closely monitor the excavated material for significant changes in color, size (gradation), and type of material. Such changes may indicate the presence of an unmarked utility. If such changes are noted, the contractor/unit shall cease all excavation by equipment, and probe by hand. If any questions arise, the contractor/unit shall contact the undersigned.

Remarks:_____

_____

Approve: _____ Disapprove: _____ Date:_____

Rod H. Oshiro
Structural Engineer
DPW 656-2942 ext. 3029

4. The contractor/unit shall submit a completed form to the contracting officer assigned to this project prior to any excavation. The contractor/unit shall maintain this permit on site at all times during excavation. This application becomes a certified excavation permit after all utility agencies have approved the appropriate sections and the contracting officer or project manager has signed below.

Completed Permit Application Received By:

_____

Contracting Officer / Project Manager Date

# LANDSCAPE DESIGN ANALYSIS

9. LANDSCAPE DESIGN

9.1 Objectives: The landscape of Quad C shall provide an aesthetically pleasing setting and a quality environment that creates a sense of place and pride for the Soldiers who will work and live in the barracks complex. The streetscape plantings of Foote Avenue and the Quad C parking lots shall integrate the various functional areas to unify the historic district of Schofield Barracks. The landscape plan shall enhance the installation=s image by implementing the recommendations of the Exterior Architectural Plan and the Cultural Resources Management Plan. The plan shall conform to antiterrorist/force protection guidelines and apply the principles of sustainable design and traffic calming. The design shall promote simplicity, apply best management practices, and select appropriate materials to achieve visual quality at low to moderate maintenance costs.

9.2 References. The following references are available for review at the Agronomy Office, Directorate of Public Works located at Building 113, Wheeler Army Airfield, Oahu, Hawaii.

9.2.5 How to Save Trees During Construction, Tree City USA Bulletin No. 7, National Arbor Day Foundation.

9.2.6 Trees and Development: A Technical Guide to Preservation of Trees During Land Development, Nelda Matheny and James Clark, 1998.

9.2.7 City and County Ordinance No. 00-54, Exceptional Trees, City and County of Honolulu.

9.3 Design Considerations

9.3.1 Antiterrorism/Force Protection (AT/FP). The AT/FP guidance discourages landscape plantings that exceed 6 inches in height within 30 feet of a barracks building. This requirement shall result in the removal of the existing shrubs, hedgerows, groundcover, and the majority of trees growing close to the structures of the quad. New landscape plantings are allowable within the 30 feet standoff distance as long as the trees have single trunks and have upright (columnar or round-shaped) canopies. Canopies of mature trees shall not have low hanging branches and shall clear the building by 15 feet.

9.3.2 Historic Preservation Landscape Program. The large, mature trees such as monkey pods, ear pods, banyans, silk oaks, and tall Norfolk Island pines and royal palms are characteristic of the landscape of the quads and the preservation of these heritage trees is important in maintaining the ambience of the historic district. In addition, tree gaps created by earlier tree removals shall be filled in with new plantings of the same tree species

to re-establish the rhythmic pattern of the streetscape. Another important feature of the historic district is the open spaces such as the green belt along Meigs Avenue and the central court of the quad that were key elements of the original installation layout.

9.3.3 There are no Exceptional Trees protected by City and County of Honolulu ordinance in the project site.

9.3.4 Foote Avenue Corridor (Glennan Avenue to Meigs Avenue). The establishment of street trees along the length of Foote Avenue shall define this major thoroughfare and create a strong visual edge of the historic district. The Foote streetscape shall mirror the existing shade tree plantings of Waianae Avenue that borders the quads on the north. The tree plantings shall also reduce the scale of the quad building facade, calm traffic, and provide shade to the area. Hedge plantings shall screen the parking lots to visually unify the area and reinforce the integrity of the historic district. Wide walkways on both sides of this main corridor shall promote pedestrian and bicycle traffic.

9.3.5 Screens and Buffers. The use of trees, hedgerows and other landscape screening methods shall conceal unsightly areas or structures to enhance visual image.

9.3.6 Plant Selection. The landscape plants shall reinforce a tropical theme with emphasis on the use of palm trees. When possible, material selection shall reflect the orange and yellow colors of the 25th Infantry Division=s insignia. Plant species shall be easy to maintain, locally hardy, and tolerant to the specific site conditions. The use of suitable native species is encouraged. Poisonous plants and trees that bear edible fruit, are very littersome, or have aggressive root systems shall not be utilized.

9.3.7 Sustainable Sites Design. The project shall minimize site disturbance to prevent soil erosion and to protect the existing trees and their roots. The design shall minimize off-site storm water runoff by promoting the use of pervious surfaces. The landscape design shall integrate water conservation measures by installing hardy native plants, drip irrigation systems, and mulches. The design shall apply alternative treatments to minimize lawn areas and landscape for energy conservation by planting appropriate shade trees in locations to cool adjacent streets, parking lots, walkways, and buildings.

9.3.8 Minimize Tree Conflicts. The design shall select tree species with non-aggressive root systems to minimize tree root conflicts with foundations, sidewalks, and underground utilities. Tree selection shall also fit (size and shape) the species to match the available growing space above and below ground. The design shall locate new tree plantings to avoid potential conflicts. In new planting locations and existing tree sites where root conflicts are inevitable, install treatments that will mitigate the situation.

9.4 Landscape Minimum Requirements

9.4.1 Tree Preservation and Removal

9.4.1.1 The preliminary inventory of existing trees for the project area is shown in the attached RFP reference drawing entitled TREE PRESERVATION AND REMOVAL PLAN. (Note that additional existing tree inventory information will be shown on the topographic survey and will be provided to the Offeror during the advertising period.) This plan classifies each individual tree into one of four classes as indicated below:

9.4.1.2 Reserved.

9.4.1.3 Class A category. Designated trees shall be saved in place.

9.4.1.4 Class B category. Designated trees shall be relocated within the project site. New location of the trees shall be indicated in the landscape planting plan.

9.4.1.5 Class C category trees shall be removed during the demolition phase of construction.

9.4.1.6 Tree Protection Zone. No grading, compaction, or construction activity shall occur in this zone immediately surrounding a Class A tree. All underground utilities, storm drains and irrigation lines should be routed outside the tree protection zone. If utilities must traverse the tree protection zone, they shall be tunneled or bored at a depth of 4 feet or greater within the zone. For broad spreading canopy trees, the zone shall extend radially outward to 20 feet from the external surface of the trunk. For all other broadleaf type of tree species, the zone shall extend to 15 feet. For all palm trees, the zone shall extend to 10 feet. The zone shall be entirely enclosed by a temporary fence prior to any demolition work and shall remain in place until all site work and building construction are completed. The location of all Class A trees shall be identified in the offeror=s Demolition Plan, Landscape Plan, Grading, and Utility Plans.

9.4.1.7 Tree Protection During Demolition and Construction

9.4.1.7.1 The Contractor shall retain the services of an arborist who has been certified for at least 5 years with experience in tree protection during construction, tree pruning and transplanting trees. The Contracting Officer shall approve the selection of the certified arborist. The arborist shall provide consulting services and perform quality assurance duties during the contract period. The arborist shall serve as the Contractor=s liaison with The Outdoor Circle on matters pertaining to the protection of the trees on the project site. The arborist shall also ensure that branch and root pruning and tree relocation work are performed in accordance with standards of the National Arborist Association and the International Society of Arboriculture; proper measures are taken to protect the canopies and root systems of the trees from unnecessary damage from construction activity; when potentially damaging construction activity is performed, that such activity is performed in a manner that will minimize damage to the tree; and trees are provided proper care and remain in good health during the demolition and construction period.

9.4.1.7.1.2 The Contractor shall arrange a pre-construction meeting attended by the Contractor, subcontractors, Contracting Officer and selected consultants, and the Contractor=s certified arborist to review procedures for performing tree-related work, work in the areas of saved trees, access routes, storage areas, and measures to protect trees during construction.

9.4.1.7.1.3 Protection Fence. The Contractor shall erect a temporary fence around each saved tree such that the fence encloses the tree protection zone as a minimum (Diagram 1). The fences shall be erected prior to the commencement of any work and shall not be removed until all work that is potentially injurious to the trees is completed. If an existing structure prevents proper enclosure of the tree protection zone prior to demolition, the Contractor shall initially erect the fence around the tree to the extent that is reasonably possible. After demolition, the fence shall be reconfigured to enclose the tree protection zone. Protection fences shall not be relocated or removed without the written permission of the arborist.

9.4.7.1.4 Limitation of Construction Activities under Existing Tree Canopies. The Contractor shall limit activities under the canopy of existing trees to only those activities explicitly required to complete the

construction under and/or adjacent to the tree=s canopy as shown and specified. All excavation work required under the canopy of the tree shall be performed under the direction of the arborist. Material and topsoil stock piling, vehicle parking, temporary roadways, construction material mixing, portable latrine, and field office will not be allowed under the canopy. Spoils, waste, and washout water shall not be deposited or stored, either temporarily or permanently, under the canopy.

9.4.1.7.1.5 Tree Pruning. A certified tree worker under the general supervision of a certified arborist shall perform the tree pruning and root pruning work.

9.4.1.7.1.6 If injury should occur to any tree during construction, the Contractor shall immediately report the injury to the certified arborist. The certified arborist shall evaluate the injury and apply appropriate treatments. The Contractor shall submit a written report of the tree injury and treatment to the Contracting Officer.

9.4.1.7.1.7 Tree Maintenance. The Contractor shall irrigate the trees as necessary to maintain their health during the course of the demolition and construction period. Groundcover growth within the fenced-in area shall be maintained at a height not to exceed 250 mm (10 in). The application of herbicides is prohibite4d under the canopy of the trees.

9.4.1.7.1.8 Root Pruning. Before grading, pad preparation, or excavation for foundations, footings, walls, or trenching, prune roots that are greater than two (2) inches in diameter by manually digging a trench and cutting exposed roots with a saw, vibrating knife, rock saw, narrow trencher with sharp blade, or other approved root pruning equipment. Any roots damaged during grading or construction shall be exposed to sound tissue and cut cleanly with a saw.

9.4.1.7.1.9 If temporary haul or access roads must pass over the root area of trees, a roadbed of 6 inches of mulch or gravel shall be created to protect the soil. The roadbed material shall be replenished as necessary to maintain a 6-inch depth.

9.4.2 New Tree Plantings for Restoration. Provide Silk Oak (Grevillea robusta) trees to fill in gaps in the street lawns bordering parking areas on the west-side of Flagler Avenue, the north-side of Foote Avenue, and the west-side of Meigs Avenue.

9.4.3 Landscape Building 355 Front Entrance on Waianae Avenue. Provide landscaping to enhance and accentuate the entryway of the building.

9.4.4 Quadrangle C Signage. Provide lighted signage to identify "Quadrangle C". Also, indicate its year of construction "Est. 1915". The sign architecture shall be compatible with the character of building 355. Minimum sign size 2.5 feet x 4 feet excluding base. Lettering shall be pin mounted. Place sign in an appropriate location along Waianae Avenue. Provide landscaping to accentuate signage.

9.4.5 Landscape Front Entryway Courtyards of Buildings 356, 357, and 358. Design an entrance space to the buildings that will accommodate and direct pedestrian traffic and create an atmosphere for socializing. Place more emphasis on the development of the center entryways and less on the side courtyards. As a minimum requirement, provide an informal grouping of a single-trunk type of palm species for the center entryways of each building. Each planting group shall consist of a minimum of 3 specimens. The same design shall be applied to the 3 buildings.

9.4.6 Foote Avenue Corridor Streetscape. Plant a minimum of 8 royal palm specimens in the street lawn fronting Foote on the south side of the parking lot west of building 356. The height of furnished palms shall match the 2 existing royal palms in the lawn. Provide a hedgerow to screen the parking lot with an allowance of 2 feet of car overhang into the planter strip.

9.4.7 Quad C Interior Court. Provide a minimum of 10 medium-sized canopy shade trees around the perimeter of the court that will complement the existing African Tulip tree located in the north corner. The tree species shall not be Kukui or Formosa Koa which are planted in the courts of the other quads.

9.4.8 Landscape Memorial. The memorial plaque is located at the east entry into the quad complex on Waianae Avenue. Provide paved sidewalk with a minimum width of 5 feet from the curbing to the plaque. Provide plantings to define and accentuate the memorial.

9.4.9 Screen Plantings. Provide plantings to screen unwanted views of trash enclosures, utility pad mounts, etc. that are outside of the AT/FP standoff zone of 30 feet from buildings.

9.4.10 Turf Plantings.

9.4.10.1 St. Augustine (*Stenotaphrum secundatum*): Establish grass around building 355, in center and side courtyards of buildings 356, 357, and 358 and in all other areas where sunlight conditions do not favor common bermuda grass growth.

9.4.10.2 Common Bermuda (*Cynodon dactylon*): Establish grass in the central court of the quad complex and in all other turf areas within the project site not planted with St. Augustine. Disturbed ground areas outside of the project area shall also be re-established with bermuda grass.

9.4.11 Tree Planting Material Requirements

9.4.11.1 Palm species: field stock, trunk height 10-20 feet, trunk unmarked with a diameter measurement not less than 6 inches along any point of the trunk. Specimens in a group planting shall have staggered heights. Suitable palm species are Alexander (Archontophoenix Alexandra), Joannis (Veitchia joannis), Fiji (Pritchardia pacifica), Princess (Dictyosperma album), Foxtail (Wodyetia bifurcata), Queen (Syagrus romanzoffianum), and Black (Normanbya normanbyi).

9.4.11.2 Medium-sized canopied shade tree (species not identified): pot size 25 gallons, trunk caliper not less than 2 inches, height not less than 8 feet.

9.4.12 Quality of Planting Material. All plant material furnished shall have a habit of growth that is normal for the species and shall be healthy and free from disease, insects and injuries. Trees and shrubs shall have well developed branching with vigorous root systems. Roots must fill containers, but show no evidence of being or having been root bound. Trunks shall be reasonably straight and symmetrical with crown and have a persistent main leader. Trees shall not be Apoled@ or the leader removed. Any tree or shrub with a weak, thin trunk not capable of supporting itself when planted in the open will be rejected. Plants shall equal or exceed measurements specified in the planting plan, which will be the minimum acceptable sizes after pruning. If any plant specified is not obtainable, submit a written substitution presenting either a different size of the same species or a similar alternate species. Substitutions of plant materials will not be permitted unless authorized.

9.4.13 Imported Screened Topsoil. New topsoil at a minimum of 6 inches deep shall be furnished for the newly planted areas in the front and side courtyards of buildings 650, 651, and 652. The topsoil shall be fertile, friable of loamy character, and amended with humus material. The soil shall have passed through a 6.4 mm screen. The topsoil shall be free of weed seeds, other viable plant material such as nutgrass, stones, and other deleterious substances.

9.4.14 On-Site Topsoil. Except for the areas identified in paragraph above, all areas shall use the saved topsoil from the site. Soil tests shall be performed for pH, chemical analysis and mechanical analysis to establish the quantities and type of soil amendments required for the type and variety of plant material specified. The saved topsoil shall be amended per recommendations of the soil test. If the stored site=s topsoil is not sufficient to cover the landscaping needs, additional topsoil shall be provided by the contractor from an approved off site source.

9.4.15 Root Barriers. Root barriers shall be provided for new plantings of the broadleaf trees in the parking lots and streetscapes. In addition, provide root barriers for saved broadleaf trees located close to the pavements and foundations. Barriers shall be woven fabric, minimum 19.5 inches in width, with integral chemical nodules. Linear type of application method of the root barrier shall be used rather than encircling the tree root ball.

9.4.16 Landscape Edging. Bed dividers shall be provided to separate shrub beds, tree wells, and mulch treatments. Plastic header shall be flexible, resin-formulated edging 5.25 inches high and have a 1.12 inch diameter bead; designed with ribbed sides and a t-shaped bottom; heavy duty grade construction; and sun guarded, carbon black for UV protection.

9.4.17 Mulch Applications. Organic and/or inorganic mulch treatments shall be provided in shrub beds, planter wells, and in appropriate areas where it can serve as a cost-effective alternative to turf groundcover. As a minimum, organic mulch material shall be stable, fully composted green waste; gray to dark brown; no odor; ph 7-8; 80% of the material shall pass through a screen of 3 inches or smaller; and free of viable weed seeds, litter, and deleterious material.

9.4.18 Percolation Test. Test for percolation shall be performed to determine positive drainage of plant pits and beds. All soil and drainage conditions detrimental to the growth of plant materials shall be identified and a proposal correcting the conditions shall be submitted.

9.4.19 Installation of Plant Material. For tree pits in parking lots, minimum size of planting hole shall be 5 feet by 5 feet by 3 feet deep. Remove existing pavement, base course, and sub-base course and backfill with topsoil and compact to 70% of maximum density. When obstructions below ground or poor drainage affect the planting operation, proposed adjustments to plant location, type of plant and planting method or drainage correction shall be submitted. For all other plan pits, excavate and backfill as recommended by the trade and ANSI Z60.1.

9.4.20 Maintenance During Planting Operation. Installed plants shall be maintained in a healthy growing condition. Maintenance operations shall begin immediately after each plant is installed and shall continue until the plant establishment period commences.

9.4.21 Maintenance During Establishment Period.

9.4.21.1 The maintenance period shall begin upon written acceptance of the planting operations and continue for 365 days thereafter. During this period, provide plants with optimum growing conditions and maintain the appearance of the planted areas.

9.4.21.2 The maintenance of plants shall include, but no limited to, straightening plants, tightening stakes and guying material, repairing tree wrap, protecting plant areas from erosion, maintaining erosion material, supplementing mulch, removing dead or excessive growth by pruning, maintaining edging of beds, checking for girdling of plants, watering, fertilizing, weeding, insects and diseases pest control, removing and replacing unhealthy plants and unsatisfactory turf areas, mowing turf, and removing plant and litter debris.

9.4.21.4 Restricted use pesticides shall not be utilized. All pesticide applications, regardless of pesticide application, shall be performed or supervised by personnel that are certified by the State of Hawaii to apply pesticides in the Ornamental Plants and Turf category.

9.4.22 Automatic Irrigation System.

9.4.22.1 Provide permanent fully automatic irrigation systems for the landscape and turf areas surrounding buildings 355, 356, 357, and 358; the central court of the quad; and the street lawn of the Quad C parking lot along Foote Avenues.

9.4.22.2 A computer based controller(s) shall be provided with rain sensors. For the quad court, install Hunter I-40 rotor Pop-up with check valve and stainless steel riser (or equivalent) irrigation heads with triple-swing joint connection to the lateral.

9.4.22.3 Place main lines a minimum of 18 inches and laterals 12inches below finished grade. Place pipes and electrical wiring crossing pavement at least 18 inches below finish grade at sidewalks and 2 feet below finish grade at roadways. Install electrical wiring below irrigation pipes for protection. Provide appropriately sized sleeves for all pipes going under sidewalks and roads.

9.4.23 Reserved.

9.4.24 Disposal of green waste material shall be outside the limits of Government property, and shall be the contractor=s responsibility. The contractor may at his option dispose of trees and shrubs by chipping the green waste and applying the material as a mulch layer 100 to 150 mm (4 to 6 in.) thick over bare ground surfaces of training grounds at Schofield Barracks to control soil erosion. The Director of Public Works, Schofield Barracks, will determine the location of the disposal site.

9.4.25 Warranty.

9.4.25.1 Furnished plant materials shall be guaranteed to be in a vigorous growing until completion of the maintenance period. Plants that decline or die during the warranty period shall be replaced using the same kind and size as originally planted. The warranty shall also apply to existing trees on the job site that are either saved in place or relocated (transplanted).

9.4.25.2 Furnished irrigation system shall be guaranteed to be in full operation during the maintenance period. Material and equipment found to be defective due to faulty material or workmanship shall be

immediately repaired or replaced. The contractor is responsible for damage caused by the irrigation system during the installation or the warranty period due to failure of workmanship or materials.

FOR OFFICIAL USE ONLY

# 1.0 INTRODUCTION

This section summarizes the tasks performed by Hinman Consulting Engineers, Inc. and includes a discussion of typical explosion effects on buildings. The site and buildings are described in Section 2. Section 3 summarizes the blast analysis, and retrofit recommendations and progressive collapse requirements are given in Section 4. Building layout sketches showing recommended retrofits and a list of drawings reviewed are included in the appendix.

## 1.1 Background

Mitsunaga & Associates, Inc. contracted Hinman Consulting Engineers, Inc. to perform an air-blast and progressive collapse vulnerability assessment and develop conceptual retrofit recommendations for Buildings 355, 356, 357, and 358 which comprise Quad "C" at Schofield Barracks in Oahu, Hawaii. This report summarizes the methods, findings and recommendations of this assessment.

## 1.2 References

The following references were used in the preparation of this report:

- *DoD Anti-Terrorism / Force Protection (AT/FP)Minimum Standards for Buildings, UFC 4-010-01*, dated 31 July 2002 [1];
- *Department of Defense Interim Antiterrorism/Force Protection Construction Standards Guidance on Structural Requirements*, dated March 5, 2001 [2];
- Excerpts from the original design drawings, dated 1917. Drawings reviewed were primarily for Building 355;
- Drawings for the Modernization of Barracks Quads C& J and Medics Area, dated 1973;
- Corps of Engineers seismic upgrade drawings for FY03 MCA PN 52068 & BUP PN 52069 PH3A, dated 2001.

A detailed list of all drawings reviewed is included as an appendix to this report.

## 1.3 Tasks Performed

Based on above listed references, Hinman Consulting Engineers, inc. has performed the following tasks for this report:

- Determined critical threat locations;
- Determined air-blast parameters for the critical threat locations;
- Performed dynamic analysis of walls, columns, floor systems, roof systems and windows to assess their response to the determined air-blast parameters;
- Performed static and dynamic analysis of perimeter structural elements to determine their resistance to progressive collapse; and
- Developed conceptual level retrofit schemes to bring the buildings into compliance with the requirements of the standards referenced above.

## 1.4 Limitations and Exclusions

The following are the limitations and exclusions of this report:

- Detailed design was not included in the scope of this work and is to be performed by the Design/Build contractor in consultation with a qualified blast consultant;
- Where specific drawings were not available, the following was assumed
  - Details provided for one building, were assumed to be the same for all buildings;
  - Where no details were available, layout and details found during our analysis of Schofield Barracks, Quad F, were assumed;
- Retrofit recommendations included in the Corps of Engineers seismic upgrade design drawings were assumed to be constructed and were therefore used in our analysis, where applicable;
- Site retrofits (i.e. installation of vehicle access arms at the entry points to the inner quad area) were assumed to be installed;
- Analysis of the recommended retrofits for standard and other abnormal loading conditions (i.e. seismic loading) was outside the scope of work and should be performed prior to final design and construction;
- Analysis of existing foundations to determine their capacity to resist the loads generated from air-blast loading was outside the scope of work and should be performed prior to final design and construction;
- Cost estimating was not included in the scope of work for this report; and
- Review of the project for overall compliance with Antiterrorism requirements aside from air-blast response and progressive collapse is beyond the scope of work for this report.

## 1.5 Explosion Effects and Building Response

The principles underlying our blast analysis and recommendations for the windows are derived from the general effects of explosions on buildings. These effects and subsequent calculations are described in the military manual TM5-1300 [3], the text on structural dynamics from Biggs [4], and ConWep [5]. In this section, we explain these effects briefly, as a background for the subsequent analysis and upgrade discussions.

### 1.5.1 Explosive Effects

An explosion is an extremely rapid release of energy in the form of light, heat, sound, and a shock wave. The shock wave consists of highly compressed air traveling radially outward from the source at supersonic velocities. As the shock wave expands, pressures decrease (with the cube of the distance), and when it meets a surface that is in line-of-sight of the explosion, it is reflected and amplified by a factor of up to thirteen.

The magnitude of the reflection factor is a function of the proximity of the explosion and the angle of incidence of the shock wave on the surface. The pressures decay rapidly over time (i.e., exponentially) and have a very brief span of existence, measured typically in thousandths of a

second, or milliseconds. Diffraction effects, caused by corners of the building, may act to confine the air-blast, prolonging its duration. Late in the explosive event, the shock wave becomes negative, creating suction. Behind the shock wave, where a vacuum has been created, air rushes in, creating a powerful wind or drag pressure on all surfaces of the building. This wind picks up and carries flying debris in the vicinity of the detonation. In an external explosion, a portion of the energy is also imparted to the ground, creating a crater and generating a ground shock wave analogous to a high-intensity, short-duration earthquake.

For an explosive threat defined by its charge weight in pounds of TNT-equivalent, **W**, and its distance from the target, or standoff, **R**, the peak pressure and impulse of the shock wave are evaluated using charts available in military handbooks. The *impulse* is defined as the area under the pressure versus time curve (i.e., the integral of pressure with respect to time). The duration of the loading, **td**, is defined in this report as the duration of a linearly decaying function having the peak impulse, **I**, and pressure, **P**, of the actual air-blast (i.e., **td = 2 I/P**). Because this duration is somewhat different from the actual duration (which is based on an exponentially decaying function), it is referred to as an "equivalent" duration.

### 1.5.2 Building Damages Due to Explosions

The extent and severity of damage and injuries in an explosive event cannot be predicted with perfect certainty. Past events show that the unique specifics of the failure sequence for a building significantly affect the level of damage.

For instance, two adjacent columns of a building may be roughly the same distance from the explosion; but in the explosion, only one fails because it is struck by a fragment in a particular way which initiates collapse. The other, by chance, is not struck and holds. Similarly, glass failures may occur outside of the predicted areas. Also, the details of the physical setting surrounding a particular building occupant may greatly influence the level of injury incurred. Moreover, the position of the person, seated or standing, facing towards or away from the event as it happens, may result in injuries ranging from minor to severe.

Despite these uncertainties, it is possible to give some general indications of the overall level of damage and injuries to be expected in an explosive event, based on the size of the explosion, distance from the event, and assumptions about the construction of the building. Additionally, there is strong evidence to support a relationship between injury patterns and structural damage patterns.

Damage due to the air-blast shock wave may be divided into direct air-blast effects and progressive collapse. Direct air-blast effects are damage caused by the high-intensity pressures of the air-blast close in to the explosion. These may induce the localized failure of exterior walls, windows, floor systems, columns, and girders.

Progressive collapse refers to propagation of structural failure to members above and to the side of the damaged area, causing extensive collapse of a portion or all of the building. Progressive collapse may or may not occur, depending on the design and construction of the building, the members lost due to direct air-blast effects, and other factors.

The shock wave is the primary damage mechanism in an explosion. The pressures it exerts on building surfaces may be several orders of magnitude greater than the loads for which the building is designed. The shock wave also acts in directions that the building may not have been designed for, such as upward on the floor system. In terms of sequence of response, the air-blast first impinges on the weakest point in the vicinity of the device closest to the explosion, typically the exterior envelope of the building. The explosion pushes on the exterior walls at the lower stories and may cause wall failure and window breakage. As the shock wave continues to expand, it enters the structure, pushing both upward and downward on the floors.

Floor failure is common in large-scale vehicle-delivered explosive attacks, because floor slabs typically have a large surface area for the pressure to act on and a comparably small thickness. In terms of the timing of events, the building is engulfed by the shockwave and direct air-blast damages within tens to hundreds of milliseconds from the time of detonation. If progressive collapse is initiated, it typically occurs within seconds of the explosion.

Severity and type of injury patterns incurred in explosive events may be related to the level of structural damage. A general summary of the relationship between the type of damage and the resulting injuries is given in Table 1.

**Table 1. Damages and Injuries due to Explosion Effects**

| Distance from Explosion | Most Severe Building Damage Expected | Associated Injuries |
|---|---|---|
| Close-in | Building Collapse | Fatality due to falling down floor levels and being crushed by falling structural components |
| Moderate | Exterior wall failure, exterior bay floor slab damage | Skull fracture, concussion |
| Far | Window breakage, falling light fixtures, flying debris | Lacerations from flying glass, abrasions from being thrown against objects or objects striking occupants |

### 1.5.3 Glass Hazards

Glass is often the weakest part of a building, breaking at low pressures compared to other components such as the floors, walls, or columns. Past incidents have shown that glass breakage may extend for miles in large external explosions. High-velocity glass fragments have been shown to be a major contributor to injuries in such incidents. For incidents within downtown city areas, falling glass poses a major hazard to passersby and prolongs post-incident rescue and clean-up efforts by leaving tons of glass debris on the street.

Explosion-related injuries are classified as primary, secondary, and tertiary. Glass breakage contributes to all three of these injury groups. The high pressure of the air-blast that enters through broken windows causes eardrum damage and lung collapse (or "primary" injuries). As the air-blast damages the building components in its path, missiles are generated which cause impact injuries (or "secondary" injuries). Airborne glass fragments typically cause penetration-

or laceration-type injuries. Larger (non-glass) fragments may cause non-penetrating, or blunt trauma, injuries. Finally, the air-blast pressures cause occupants to be bodily thrown against objects or to fall ("tertiary" injuries). These effects are summarized in Table 2.

**Table 2. Explosion-Related Injury Types**

| Injury Classification | Injury Type | Cause |
|---|---|---|
| Primary | Eardrum rupture, lung collapse | Air-blast pressure levels |
| Secondary | Lacerations and blunt trauma injuries | Missile impact |
| Tertiary | Being thrown or falling due to the force of the explosion | Air-blast pressure impact |

Lacerations due to high-velocity flying glass fragments have been responsible for a significant portion of the injuries received in explosion incidents. In the bombing of the Alfred P. Murrah Building in Oklahoma City, for instance, 40% of the survivors within the Murrah building cited glass as contributing to their injuries. Within nearby buildings, laceration estimates ranged from 25% to 30% [6].

# 2.0 SITE AND BUILDING DESCRIPTION

This section describes the site layout and building descriptions.

## 2.1 Building Location and Layout

The four buildings are grouped together to form what is referred to as Quad C in Schofield Barracks on the island of Oahu, Hawaii. Quad C is located inside the Schofield Barracks facility, more than 150 feet from the installation perimeter. The Quad is surrounded by streets on four sides (Figure 1). Access roads lead into an inner quad area, which has recreation facilities as well as limited parking. This study assumes that vehicle control devices (i.e. access arms) are installed at the entrance to these access roads so that only emergency and maintenance vehicles may gain access to this area. Trees and shrubbery are scattered on the lawns around the perimeter of the buildings. A chiller plant and fire pump house are located east of Building 358.

## 2.2 Distances to Roads and Parking Areas

The distances from the edge of pavement of roads and parking areas to the face of the building is known as the standoff distance. These distances are used in determining the critical threat locations for the air-blast analysis and are shown in Table 3 below.

**Table 3. Distances from Roads and Parking Areas to Face of Buildings**

| Building | Distance (ft) |
|---|---|
| 355 | 22.4 |
| 356 | 10.4 |
| 357 | 20.2 |
| 358 | 32.8 |

## 2.3 Building Construction

All four buildings were constructed circa 1917 and have reinforced concrete floor slabs supported by reinforced concrete beams and columns. The exterior walls are 8 inch thick reinforced concrete at the first two floors, and 6 inches thick at the third floor. The roof system originally consisted of plywood supported by wood trusses at building 355. This has since been modified to metal decking supported by steel open-web trusses. Additionally, per the seismic evaluation report by the Corps of Engineers, the roof system for Buildings 356, 357, and 358 is scheduled to be modified to metal decking supported by structural steel "I" beams. This is the system evaluated for the purposes of this report.

### 2.3.1 Buildings 356, 357, and 358

Buildings 356, 357, and 358 are all rectangular with two "bump outs" located at the one-third points on the inner quad side of the buildings (see building layout sketches in the appendix).

These buildings have exterior corridors and stairs facing the inner quad. These exterior stairs are the only means of access and egress for the upper floors.

### 2.3.2 Building 355

Building 355 is rectangular with an exterior corridor and stairs on the inner quad side of the building. Like the other buildings, the stairs provide the only means of access and egress for the upper floors. An open passageway at the center line of the building leads from the street to the inner quad area.

### 2.4 Building Classifications

The buildings will be used either for troop billeting or administrative functions (offices) and therefore are classified as 'Primary Gathering Structures' and 'Troop Billeting' by the AT/FP criteria.

### 2.5 Buildings Threat/Risk Analysis

No threat has been provided for these buildings, in this situation, the AT/FP criteria require that a 'Minimum Protection Level' is to be met. The buildings were analyzed for loads from detonation of a weapon with an Explosive Weight II per Table 1 of the Department of Defense *Minimum Antiterrorism Standoff Distances for Buildings*, (see reference section 1.2).

## 3.0 MATERIAL PROPERTIES AND EVALUATION CRITERIA

Based on conversations with Jong Namgung of Mitsunaga & Associates, the following material properties are used for the analysis of the existing structures:

| | |
|---|---|
| Reinforcing Steel: | fy= 40,000 psi |
| Concrete: | f'c = 2,500 psi |
| Structural Steel: | fy= 36,000 psi |

The evaluation criteria is based on material, structural member type and whether the analysis is for progressive collapse or air-blast response. Table 4 shows the evaluation criteria used in the analysis for this report.

**Table 4. Evaluation Criteria**

| Material | Structural Element | Air Blast Support Rotation | Air Blast Ductility |
|---|---|---|---|
| Concrete | Slabs | 2 degrees | 15 |
| | Beams | 2 degrees | 15 |
| | Walls | 2 degrees | 15 |
| | Columns | 2 degrees | 3 |
| Steel | Joists | 2 degrees | 2 |
| | Beams | 2 degrees | 10 |
| | Metal Deck | 4 degrees | 6 |

1.5

## 4.0 BLAST RESISTANT DESIGN REQUIREMENTS

All buildings were analyzed for conformance with applicable requirements for blast resistance.

### 4.1 Critical Threat Identification

Critical threats were identified for each of the building faces. For the street face of the buildings, the threat was located at the closest edge of pavement. For the sides of the buildings, it was

determined that the critical threat location was at the edge of pavement closest to the front face of the building. For the inner quad face of the building, the critical threat was located at the edge of pavement directly across from the rear corner of the building. Figure 1 shows these Threat Locations. Table 5 shows the Maximum Pressure and Impulse determined for each building.

**Table 5: Maximum Reflected Pressures and Impulses**

| Building | Reflected Pressure | Reflected Impulse |
|---|---|---|
| 355 | 67.36 psi | 110.0 psi-msec |
| 356 | 453.5 psi | 241.5 psi-msec |
| 357 | 87.19 psi | 122.5 psi-msec |
| 358 | 27.61 psi | 73.86 psi-msec |

The following sub-sections provide additional information regarding pressures and impulses used in the analysis.

### *4.1.1 Building 355*

The side of the building facing the street (Line E) was analyzed for the reflected pressure loading at a 25.4 foot standoff. The side facing the quad (Line A) was analyzed for incident pressure at an 86.9 foot standoff. The short sides of the building (Lines 1 & 20) were analyzed for incident pressure at the 25.4 foot standoff. These standoff distances consist of the actual distance to the edge of the street plus an additional 3 feet to the centerline of the vehicle carrying the weapon. In addition, building elements located in the passageway at the center line of the building, were also analyzed for 25.4 foot incident pressure.

### *4.1.2 Building 356*

The side of the building facing the street (Line E) was analyzed for the reflected pressure loading at a 13.4 foot standoff. The side facing the quad (Line A) along with the "bump outs", were analyzed for incident pressure at a 102.6 foot standoff. The short sides of the building (Lines 1 & 21) were analyzed for incident pressure at the 13.4 foot standoff.

### *4.1.3 Building 357*

The side of the building facing the street (Line E) was analyzed for the reflected pressure loading at a 23.2 foot standoff. The side facing the quad (Line A) along with the "bump outs", were analyzed for incident pressure at an 89.3 foot standoff. The short sides of the building (Lines 1 & 21) were analyzed for incident pressure at the 23.2 foot standoff.

### *4.1.4 Building 358*

The side of the building facing the street (Line E) was analyzed for the reflected pressure loading at a 35.8 foot standoff. The side facing the quad (Line A) along with the "bump outs", were analyzed for incident pressure at a 99.3 foot standoff. The short sides of the building (Lines 1 & 21) were analyzed for reflected pressure at the 56.5 foot standoff.

## 4.2 Technical Approach

Based on the above referenced air-blast loads the following calculations were performed

- Building elements were first checked to determine whether they survived the lowest pressure and impulse (corresponding to the maximum standoff distance) generated by the weapon, this occurs at Building 358. If the element failed from this load, this portion of the analysis was complete, because the other pressures and impulses at the other buildings would be greater due to their greater standoff distances;
- If the element in question survived the load at the largest standoff, it was then analyzed for the actual standoffs for each individual building;
- For elements that survived the explosion at the largest standoff, but not at the actual standoffs, retrofits are recommended on a building-by-building basis.
- Windows were analyzed using the WINGARD [7] computer program. The worst case allowable failure mode is 3B, which corresponds to fragments being propelled into the room a maximum of 10 feet from the window.

## 4.3 Findings and Recommendations

This section presents the finding of the dynamic analysis of the individual structural elements in response to the air-blast induced loads noted above.

### *4.3.1 Building 355*

Figures 2 and 3 graphically show the locations and extent of required retrofits, as noted in the following narrative.

#### *4.3.1.1 Columns*

Analysis was performed for the exterior corridor columns and interior columns. All columns were determined to respond within the defined parameters and therefore no retrofit is required. Note that the loads used for the analysis of the interior columns were reduced to account for the window opening sizes.

#### *4.3.1.2 Beams*

All interior and exterior beams on the second and third floors are determined to fail from upward blast loading due to the lack of top reinforcement at the beam mid-span. In addition second and third floor beams on grid line C & D were determined to fail in shear. A fiber-reinforced polymer (FRP) system is to be installed on top of the floor beams to provide resistance for upward loading. One steel shear plate (10 inches wide, 1/4 inch thick) is to be attached to each vertical side of floor beams to provide additional shear resistance. The length of the plates should be long enough to allow proper attachment to the columns. The failure mode and retrofit recommendations for beams is the same for all buildings analyzed. Connections are to develop the full capacity of the supports.

See the attached building layout sketches (Figures 2 and 3 in the appendix) for locations of retrofit.

*4.3.1.3 Slabs*
The interior and exterior slabs were determined to survive downward blast forces. However, they were determined to fail in upward loading since there is no top reinforcement at mid-span. A FRP system is to be installed on top of interior and exterior slabs to provide resistance for upward loading. Note that the FRP is not a wearing surface and must be protected with a floor covering.

The failure mode and retrofit recommendations for the slabs are the same for all buildings analyzed.

*4.3.1.4 Exterior Walls*
The exterior walls are reinforced concrete (8 inch thick for the first two floors and 6 inch thick for the third floor). The 8 inch wall has two rows of horizontal and vertical reinforcements (3/8 inch diameter bars at 24 inch spacing). The 6 inch wall has one layer of 6x6-#6x#6 wire mesh as the reinforcement.

> *Line B.* Walls on this line were determined to survive the incident pressure and impulse from a blast loading at the 86.9 foot standoff distance.
>
> *Lines E, 1, and 21.* Walls on these lines were determined to fail from air-blast loads. All three floors of exterior walls will be retrofitted with new shotcrete walls installed on the inside face of the exterior walls. The shotcrete walls will have one layer of #6 rebars spaced 6 inch on center in both the vertical and horizontal direction. The first floor requires an 8 inch thick shotcrete wall, while the second and third floor requires a 6 inch thick shotcrete wall. Shotcrete walls are to be thru-bolted to the slabs at the top and bottom edges.
>
> *Lines 10 & 11 (from Lines C to E).* Walls in the passageway are also determined to fail from air-blast loads. These areas require an 8 inch shotcrete wall as previously described.

See the appendix for the attached building layout sketches (Figures 2 and 3) and conceptual retrofit sketch (Figure 11) for more information about the shotcrete wall.

*4.3.1.5 Roof System*
Based on latest architectural drawings, the metal roof deck spans 6 feet. If the span is 6 feet, the metal deck should be equivalent to Verco W2 Formlok 18 Gage in order to resist the air-blast loading. If the metal deck spans 8 feet, then it should be equivalent to Verco N Formlok 18 Gage. No information was available on the existing trusses, we assumed same member as analyzed in Quad F.

*4.3.1.6 Windows*
The architectural retrofit drawings show that the windows on the side of the building facing the inner quad are to be increased in size. This will be accomplished by removing a portion of the

exterior wall under the window. Window sizes on the other sides of the building will remain as they are now. The Corps of Engineers seismic evaluation document calls for double pane windows consisting of two lites of 3/4 inch laminated thermally tempered glass separated by an air space, for all windows facing the street. All other windows are called out to be a minimum single pane 1/4 inch laminated thermally tempered glass. This report recommends different window glass lay-ups and thicknesses based on the actual pressures and impulses from the critical threat locations.

Windows were analyzed for an average pane size. Larger windows may require structural mullions to reduce window thickness. Intermediate muntins are assumed to be decorative and do not provide structural support for the panes. If operable, windows should open outward.

Window response and retrofits are summarized below. Also see the attached building layout sketches, in the appendix, for locations of retrofit. (Figures 2 and 3)

> *Line B.* With the 86.9 foot standoff, the 1/4 inch laminated thermally tempered windows are determined not to crack, and therefore are over-designed. A glass that is annealed, rather than thermally tempered would be more cost effective. A 1/4 inch laminated annealed glass with a minimum 5/8 inch bite will crack with no fragments flying into the room (i.e., failure response of 2), which meets the requirements of the criteria document.
>
> *Lines E, 1, and 20.* With the 25.4 foot standoff, the 3/4 inch laminated thermally tempered double pane windows were determined not to crack, and is therefore also over-designed. A more cost effective design would be an insulating unit comprising of an inner pane of 1/2 inch laminated thermally tempered glass, an outer pane of 1/4 inch monolithic thermally tempered glass and a 1/2 inch air space, and a minimum 5/8 inch bite. The failure mode is also 2, meets the requirements of the criteria document.

All window frames, mullions and anchorage are to be designed to develop the full capacity of the glass (typical, all buildings). Frames and Mullions will most likely be steel.

*4.3.1.7 Doors*

Exterior doors are to be blast resistant. The doors are allowed to fail but must rebound out of the frame away from the interior of the building. Table 6 below shows the pressures and impulses doors should resist, based on the location of the doors.

**Table 6: Pressures and Impulses for Building 355 Exterior Doors**

| Door Locations | Pressures | Impulses |
|---|---|---|
| Street side | 67.36 psi | 110.0 psi-msec |
| Short side | 21.90 psi | 43.73 psi-msec |
| Quad side | 2.46 psi | 14.44 psi-msec |

*4.3.1.8 Foundations*
The existing foundation was not analyzed for their capacity to resist air-blast loading. (See section 1.4, Limitations and Exclusions). The foundation, however, needs to have the capacity to resist the maximum lateral load that can be transferred from the exterior walls. For Building 355, this load is 6000 lbs per foot length of the foundation.

*4.3.1.9 Blast Base Shear*
The blast base shear is provided for comparison with the seismic base shear. For building 355, the blast base shear is 235374 lbs.

### *4.3.2 Building 356*
Figures 4, 5, and 6 graphically show the locations and extent of required retrofits as noted in the following narrative.

*4.3.2.1 Columns*
Analysis was performed for the exterior corridor columns and interior columns.
Columns were determined to survive a blast originating from the critical threat location, no retrofit is required.

*4.3.2.2 Beams*
See Building 355 for description of beam failure modes and retrofit recommendations.

*4.3.2.3 Slabs*
See Building 355 for description of slab failure modes and retrofit recommendations.

*4.3.2.4 Exterior Walls*
The construction of the exterior walls is the same as in Building 355.

> *Line B and at the two "bump outs".* These exterior walls were determined to survive the incident pressure and impulse from a blast loading at the 102.6 foot standoff distance.
>
> *Lines E, 1, and 21.* Walls on these lines were found to fail from air blast loading. All three floors of exterior walls are to be retrofitted with new shotcrete walls. The third floor will get a 6 inch thick shotcrete wall, while the second floor will get 8 inch thick shotcrete wall. These shotcrete walls are to have one layer of #6 rebars spaced 6 inches on center in both the vertical and horizontal direction. The first floor will received a 10 inch thick shotcrete wall with two layers of #6 rebars spaced 6 inches on center in both the vertical and horizontal directions.

See the attached building layout sketches (Figures 4, 5, and 6), and conceptual retrofit sketch (Figure 11) for more information about the shotcrete wall.

*4.3.2.5 Roof System*
The Corps of Engineers seismic evaluation drawings call for the removal and replacement of the existing roof with a steel framed roof with metal decking. The report calls for the use of W10

and W12 steel beams with a 1.5 inch Type "B" 18 Gage metal decking. Blast analysis requires the W10 beam to be at least W10x45, the W12 beam to be at least W12x79, and the 1.5 inch metal deck to be Verco N Formlok 18 Gage, or equal.

*4.3.2.6 Windows*

Similar to Building 355, the windows on the inner quad side of Building 356 are to be increased in size. Window sizes on the other sides of the building will remain the same. The Corps of Engineers seismic evaluation document specifies window thickness and layup identical to those for building 355. This report recommends different window glass lay-ups and thicknesses based on the actual pressures and impulses from the critical threat locations.

Windows were analyzed for an average pane size. Larger windows may require structural mullions to reduce pane size. Intermediate muntins are assumed to be decorative and do not break up the panes. If operable, windows should open outward.

Window response and retrofits are summarized below. Also see the attached building layout sketches (Figures 4, 5, and 6) for locations of retrofit.

> *Line B and at the two "bump outs".* With the 102.6 foot standoff, the 1/4 inch laminated thermally tempered windows are determined not to crack, and therefore is over-designed. A more cost effective 1/4 inch laminated annealed glass with a minimum 5/8 inch bite will crack with no fragments flying into the room (i.e., failure response of 2), which is an acceptable failure mode.
>
> *Lines E, 1, and 21.* With the 13.4 foot standoff, the 3/4 inch laminated thermally tempered double pane windows were determined not to crack, and is also over-designed. A more cost effective design is an insulating unit comprising of an inner pane of 7/8 inch laminated thermally tempered glass, an outer pane of 1/4 inch monolithic thermally tempered glass and a 1/2 inch air space, and a minimum 5/8 inch bite. The failure mode is also 2, which is acceptable.

All window frames, mullions and anchorage are to be designed to develop the full capacity of the glass (typical, all buildings). Frames and Mullions will most likely be steel.

*4.3.2.7 Doors*

Exterior doors are to be blast resistant. The doors are allowed to fail but must rebound out of the frame away from the interior of the building. Table 7 below shows the pressures and impulses doors should resist, based on the location of the doors.

**Table 7: Pressures and Impulses for Building 356 Exterior Doors**

| Door Locations | Pressures | Impulses |
|---|---|---|
| Street side | 453.5 psi | 241.5 psi-msec |
| Short side | 93.90 psi | 79.14 psi-msec |
| Quad side | 1.96 psi | 12.29 psi-msec |

*4.3.2.8 Foundations*
The existing foundation was not analyzed for their capacity to resist air-blast loading. (See section 1.4, Limitations and Exclusions). The foundation, however, needs to have the capacity to resist the maximum lateral load that can be transferred from the exterior walls. For Building 356, this load is 11500 lbs per foot length of foundation.

*4.3.2.9 Blast Base Shear*
The blast base shear is provided for comparison with the seismic base shear. For building 356, the blast base shear is 238041 lbs.

### *4.3.3 Buildings 357*
Figures 7 and 8 graphically show the locations and extent of required retrofits as noted in the following narrative.

*4.3.3.1 Columns*
Columns were determined to survive a blast originating from the street (Foote Avenue), therefore no retrofit is required.

*4.3.3.2 Beams*
See Building 355 for description of beam failure modes and recommended retrofits.

*4.3.3.3 Slabs*
See Building 355 for description of slab failure modes and recommended retrofits

*4.3.3.4 Exterior Walls*
The construction of the exterior walls is the same as in Buildings 355 and 356. The exterior walls were analyzed in the same manner as for Building 356. The walls at Line B and at the two "bump outs" were determined to be sufficient for blast loads. Walls on Lines E, 1, and 21 will be retrofitted with new shotcrete walls. First floor walls will have 8 inch shotcrete walls, while the second and third floors will get 6 inch shotcrete walls. Reinforcements for these walls will be the same as for Building 355. See the attached building layout sketches (Figures 7 and 8), and conceptual retrofit sketch (Figure 11) for more information about the shotcrete wall.

*4.3.3.5 Roof System*
See Building 356 for description of roof system retrofit.

*4.3.3.6 Windows*
Windows were analyzed in the same manner as for Building 356. New windows on lines 1, 21, and E, are to be an insulating unit comprising of an inner pane of 1/2 inch laminated thermally tempered glass, an outer pane of 1/4 inch monolithic thermally tempered glass and a 1/2 inch air space, and a minimum 5/8 inch bite. All other locations are to receive a single pane of ¼ inch laminated annealed glass with a 5/8 inch bite. If operable, windows should open outward.

All window frames, mullions and anchorage are to be designed to develop the full capacity of the glass (typical, all buildings). Frames and Mullions will most likely be steel.

*4.3.3.7 Doors*
Exterior doors are to be blast resistant. The doors are allowed to fail but must rebound out of the frame away from the interior of the building. Table 8 below shows the pressures and impulses doors should resist, based on the location of the doors.

**Table 8: Pressures and Impulses for Building 357 Exterior Doors**

| Door Locations | Pressures | Impulses |
|---|---|---|
| Street side | 87.19 psi | 122.5 psi-msec |
| Short side | 26.74 psi | 47.44 psi-msec |
| Quad side | 2.37 psi | 14.06 psi-msec |

*4.3.3.8 Foundations*
The existing foundation was not analyzed for their capacity to resist air-blast loading. (See section 1.4, Limitations and Exclusions). The foundation, however, needs to have the capacity to resist the maximum lateral load that can be transferred from the exterior walls. For Building 357, this load is 6000 lbs per foot length of the foundation.

*4.3.3.9 Blast Base Shear*
The blast base shear is provided for comparison with the seismic base shear. For building 357, the blast base shear is 236668 lbs.

***4.3.4 Buildings 358***
Figures 9 and 10 graphically show the locations and extent of required retrofits as noted in the following narrative.

*4.3.4.1 Columns*
Columns were deemed adequate for blast loading therefore no retrofit is required.

*4.3.4.2 Beams*
See Building 355 for description of beam failure modes and recommended retrofits.

*4.3.4.3 Slabs*
See Building 355 for description of slab failure modes and recommended retrofits.

*4.3.4.4 Exterior Walls*
The construction of the exterior walls is the same as in Buildings 355, 356, and 357. The exterior walls were analyzed in the same manner as for Building 356. The walls at Line B and at the two "bump outs" were determined to be sufficient for blast loads. Walls on Lines E, 1, and 21 will be retrofitted with new shotcrete walls. All three floors will receive new 6 inch shotcrete walls, Reinforcements for these walls will be the same as for the 6 inch shotcrete walls at

Building 355. See the attached building layout sketches (Figures 9 and 10), and conceptual retrofit sketch (Figure 11) for more information about the shotcrete wall.

*4.3.4.5 Roof System*
See Building 356 for description of roof system retrofit.

*4.3.4.6 Windows*
Windows were analyzed in the same manner as for Building 356. New windows on lines 1, 21, and E, are to be an insulating unit comprising of an inner pane of 1/4 inch laminated thermally tempered glass, an outer pane of 1/4 inch monolithic thermally tempered glass and a 1/2 inch air space, and a minimum 5/8 inch bite. All other locations are to receive a single pane of 1/4 inch laminated annealed glass with a 5/8 inch bite. If operable, all windows should open outward.

All window frames, mullions and anchorage are to be designed to develop the full capacity of the glass (typical, all buildings). Frames and Mullions will most likely be steel.

*4.3.4.7 Doors*
Exterior doors are to be blast resistant. The doors are allowed to fail but must rebound out of the frame away from the interior of the building. Table 9 below shows the pressures and impulses doors should resist, based on the location of the doors.

**Table 9: Pressures and Impulses for Building 358 Exterior Doors**

| Door Locations | Pressures | Impulses |
|---|---|---|
| Street side | 27.61 psi | 73.86 psi-msec |
| Short side | 10.68 psi | 44.40 psi-msec |
| Quad side | 2.05 psi | 12.69 psi-msec |

*4.3.4.8 Foundations*
The existing foundation was not analyzed for their capacity to resist air-blast loading. (See section 1.4, Limitations and Exclusions). The foundation, however, needs to have the capacity to resist the maximum lateral load that can be transferred from the exterior walls. For Building 358, this load is 4250 lbs per foot length of the foundation.

*4.3.4.9 Blast Base Shear*
The blast base shear is provided for comparison with the seismic base shear. For building 358, the blast base shear is 226709 lbs.

## 5.0 PROGRESSIVE COLLAPSE REQUIREMENTS

Per the *Department of Defense Interim AT/FP Construction Standards Guidance on Structural Requirements*, typical scenarios were reviewed which involved removal of primary load-carrying elements at the building perimeter. The perimeter of the structure is defined as the extreme outside envelope of the building.

Structural members considered included the new shotcrete walls, which are recommended to be installed, as retrofits to increase member response to air-blast loading, at the perimeter walls for the majority of the buildings, and the exterior columns and beams at the exterior corridor. Typical members were selected for both the first floor and the upper floors.

Following the procedures in the Progressive Collapse Design guidelines, the following scenarios were reviewed:

- *Walls:* analyzed based on the removal of a section of the shear wall with a length equal to two times the height of the wall;
- *Walls:* at corner of buildings, analyzed based on the removal of a section of the shear wall with a length equal to the height of the wall;
- *Beams:* analyzed to determine the efficacy of the beams with the loss of one supporting column below; and
- *Columns:* analyzed for their ability to withstand loss of lateral support at one floor level.

## 5.1 Shotcrete Walls

Typical exterior walls were reviewed for the buildings. Per the *Department of Defense Interim AT/FP Construction Standards Guidance on Structural Requirements* (see Page 3: Load Bearing Wall Systems), a width equal to two times the wall height was removed. Also at building corners, a width of wall equal to the wall height was removed in each direction.

The wall above the removal location was analyzed to determine whether it would support self-weight as well as the weights of the slabs previously supported by the wall that was removed and the wall and slab systems above, as appropriate. The new shotcrete walls (which were recommended for blast resistance) meet the requirements.

## 5.2 Beams

Beams were analyzed at the exterior corridors of Buildings 355, 356, 357, and 358. The span length of these beams was doubled, caused by the theoretical removal of one supporting column. These beams were determined to fail due to the column removal. A new beam (23 inches deep, 15 inches wide, with 6 - #8 rebar top and bottom of beam), Figure 12, is to be installed, next to and on the inside face of the existing beam. All new beams are to be continuous over supports and doweled into the existing beams and connected to the existing columns.

## 5.3 Columns

Columns were analyzed at the exterior corridors of Buildings 355, 356, 357, and 358. The unsupported height of these columns was doubled, assuming one floor slab was disconnected from the column. These corridor columns were determined to have sufficient capacity to support all tributary dead and live loads with the increase column height.

Ductility $\mu = 0.51$ < 15 => ok

Max Support Rotation $\theta = 0.37\,deg$ < 2 deg => ok

SHEAR CHECK

Shear from Ru $Vu = 79004.57\,lb$

Concrete Shear Capacity $Vc = 26344.54\,lb$

Shear Ratio $\lambda v = 0.33$ < 1 => stirrups required

SHEAR STEEL CHECK

Shear Reinf. Area (1/4"dia) $Av := 0.049 \cdot in^2$

Shear Reinf. Spacing $sv := 6 \cdot in$

Number of Legs $nv := 2$

Steel Shear Capacity $Vs = 13185.9\,lb$

Total Shear Capacity $Vn = 3.95 \times 10^4\,lb$

$\lambda = 0.5$ < 1 => No Good

CHECK BALANCED DESIGN

Ultimate Reaction from Slabs

$Mu_s := 896 \cdot lb \cdot ft$ (per 2 inch strip of interior slab width, see slab calcs)

$Mu_{slab} := Mu_s \cdot \frac{12 \cdot in}{2 \cdot in}$ $Mu_{slab} = 5376\,lb\,ft$ (per 1 ft strip of slab)

Inner Bay Slab Length $L_{in} := 16.33 \cdot ft$

Outer Bay Slab Length $L_{out} := 16.83 \cdot ft$

HE

Date 1/22/2003

San Francisco, California 94103

From Inner Slab $Ru_{in} = 2633.68\,lb$ (per 1 ft strip of slab)

From Outer Slab $Ru_{out} = 2555.44\,lb$ (per 1 ft strip of slab)

Total Reaction $Ru_{tot} = 103782.34\,lb$

Reaction Ratio $\lambda r := \frac{Ru}{Ru_{tot}}$ $\lambda r = 1.52$ > 1 => OK

This is the closest 2nd floor H beam, and it fails in shear from Ru, but is OK for blast. This means that other 2nd floor H beams in other buildings will behave the same way (OK for blast, fail from Ru).

This wall fails for pressure of 120 psi. But at a range of 13.4', the pressure is 453.5 psi. Therefore the wall will fail.

| | $d = 25\,in$ |
| | $de = 24\,in$ |

Beam Moment Capacity

AT MIDSPAN:

| | |
|---|---|
| Tension Steel Area | $Ast_m = 1.33\,in^2$ |
| Ultimate Moment Capacity at Midspan | $Mu_m = 114202\,lb\,ft$ |
| Midspan Moment due to Point Load | $M_p = 175398\,lb\,ft$ |
| Midspan Moment due to Distributed Load | $M_w = 81189\,lb\,ft$ |

San Francisco, California 94103

Total Midspan Moment demand — $Mtot = 256587\,lb\,ft$

$Mtot > Mu$ No Good

AT SUPPORTS:

Tension Steel Area — $Ast_s = 0.44\,in^2$

Ultimate Moment Capacity at Supports — $Mu_s = 38067\,lb\,ft$

(Since capacity fails at midspan, do not need to check moment at supports.)

Ductility and Rotation

Gross Mom. of Inertia — $Ig = 9841\,in^4$

Elastic Stiffness — $Ke = 801562\,\frac{lb}{ft}$

Ultimate Resistance — $Ru = 16919\,lb$

Steel Percentage — $\rho = 0.009$

Modular Ratio — $n = 10$

Neutral Axis of Transformed Section — $kd = 9\,in$

Cracked Mom. of Inertia — $Ic = 5011\,in^4$

Avg. Mom. of Inertia — $Ia = 7426\,in^4$

Totat Force — $P = 46552\,lb$

Equivalent Ductiltiy — $\mu = -0.29$

Ductility less than 0. Total force greater than Ru. No Good

## APPENDIX A: TIER 2 EVALUATION

## APPENDIX B: SEISMIC RETROFIT CALCULATIONS

# 1.0 INTRODUCTION

This report addresses seismic evaluation and rehabilitation issues for the Quad "C" buildings at Schofield Barracks, Oahu, Hawaii in accordance with the task order scope of work for **"FY03 MCA and BUP PN52069, Whole Barracks Renewal Brigade Complex, Phase 3A, Quad C, Schofield Barracks, Oahu, Hawaii** (Concept Design for Design-Build RFP package)". The site and buildings are described in Section 2. Section 3 summarizes the seismic evaluation findings and the proposed retrofit and includes building layouts incorporating the retrofit recommendations.

## 1.1 Background

The U.S. Army Corps of Engineers issued a Request For Proposal (RFP) for renovations to Quad "C" at Schofield Barracks, Hawaii. As stated in the RFP, contractors were to design and lay out Quad "C" renovations, which incorporated requirements to meet seismic and antiterrorism/ force protection (AT/FP) criteria and historical preservation requirements. AT/FP issues were addressed by Hinman Consulting Engineers, Inc. and are included in a separate report.

This report proposes a retrofit strategy designed to meet the above criteria and is a concept design only (for the design-build package). The Design Build contractor shall be responsible for providing the final design and retrofit for Quad "C" — subject to the requirements in the RFP package.

## 1.2 References

## 1.3 Scope of Work

Based on the above references and the task order indicated, Mitsunaga and Associates, Inc. performed the following tasks for this report:

- Reviewed available existing drawings and concept plans for the Quad "C" renovations;
- Reviewed seismic studies for similar adjacent buildings (Quad "F");
- Reviewed AT/FP recommendations for Quad"C" and similar adjacent buildings (Quad "F");
- Performed a general visual inspection on the condition of the existing buildings;
- Performed a full building evaluation (Tier 2 analysis) on one building in Quad "C" to identify structural deficiencies in the existing lateral load-resisting system; and
- Developed conceptual level retrofit schemes to bring the building into compliance with the above-referenced codes, standards, renovation concept plans, and AT/FP criteria.

### 1.4 Limitations and Exclusions

- Detailed design was not included in the scope of this work and is to be performed by the Design/Build contractor in consultation with a qualified, licensed structural engineer;
- Retrofit recommendations incorporated the renovation concept plans and AT/FP criteria for Quad "C" that were available at the time of this report and on material testing for similar adjacent buildings (Quad "F");
- Analysis of the existing structure for other than seismic loads was outside the scope of work for this report;
- Cost estimating was not included in the scope of work for this report; and
- This report does not address any other portions of the structure or property other than those areas mentioned, nor does it accord warranty, either expressed or implied, for any portion of the existing structures.

## 2.0 SITE AND BUILDING DESCRIPTION

This section describes the site layout and building descriptions.

### 2.1 Building Location and Layout

Quad C is a block of four multi-use buildings (355, 356, 357, and 358) within the Schofield Barracks installation on the island of Oahu, Hawaii. The buildings are arranged in a square pattern around an interior courtyard and are bounded by streets on three sides and an open parking lot on the fourth side. Access roads at the corners of the block lead to the interior courtyard.

Buildings 355, 356, 357, and 358 are three-story rectangular structures approximately 364 feet long by 61 feet wide by 42 feet high. Two "bump outs" are located on the courtyard side of Buildings 356, 357, and 358 at the one third points of the building. Building 355 houses a gymnasium on the 3rd floor. All buildings have exterior corridors and stairs facing the courtyard.

### 2.2 Building Construction

The buildings are reinforced concrete structures with a "mixed" framing system: concrete floor slabs are supported by concrete bearing walls along the exterior of the building and by concrete

frames along the interior, all running in the longitudinal direction. The columns and walls are supported on spread footings. The suspended floors are conventionally reinforced concrete slabs, 6 inches thick at the interior floors and 4 inches thick concrete at the exterior corridors. Two-inch thick concrete walls run transversely at the quarter points of the buildings.

The existing roof typically consists of 2x wood decking supported on 2x8 rafters spaced at 16 inches on center on wood trusses running over the interior columns. A grid of concrete beams below the trusses provides some stability to the roof structure and the exterior walls. The roof over the gymnasium in Building 355 was constructed more recently and consists of metal decking supported on structural steel trusses spaced at 10 feet on center and spanning transversely between the exterior walls.

For a detailed evaluation of the lateral load-resisting system, see Section 3.

## 2.3 Material Properties and Evaluation Criteria

Based on the Seismic Evaluation & Anti-Terrorism/Force Protection Study for Quad "F", the following material properties were used for the existing structure:

Reinforcing Steel Strength: fy = 40,000 psi
Concrete Strength: f'c = 2,500 psi

For new construction, and construction in conjunction with the existing structure (such as new shotcrete applied to existing walls), the following conservative material properties were used:

Reinforcing Steel Strength: fy = 60,000 psi (no contribution from existing reinforcing)
Concrete Strength: f'c = 3,000 psi

Also, based on the Quad "F" study, the following seismic parameters were used:

Short Period Spectral Response Acceleration Parameter, Ss = 0.60
Spectral Response Acceleration Parameter at 1 Second, S1 = 0.17

Seismic Use Group II
Performance Level: Immediate Occupancy (IO)
Site Class E

# 3.0 FINDINGS AND RECOMMENDATIONS

This section presents the findings on the evaluation of the existing Quad "C" buildings and the proposed seismic retrofit strategy.

## 3.1 Description of the Existing Lateral System

The primary lateral load-resisting elements for the existing structures are the exterior concrete shear walls located on all four sides of each building. Concrete frames running in the longitudinal direction at all levels offer minimal lateral resistance when compared to the walls (see rigidity calculations in Appendix A) and are therefore excluded from the lateral load-resisting system. Except for the side walls, the only structural elements having significant lateral resistance in the transverse direction are the 2-inch thick concrete partition walls typically located at the quarter points of each building. These walls are included in the system in order to limit the span-to-depth ratio of the floor diaphragms in the transverse direction.

Based on the existing drawings, the exterior walls are 8 inches thick at the ground and 2$^{nd}$ floors, and 6 inches thick at the 3$^{rd}$ floor. No.3 bars spaced at 24 inches on center are shown on each side and on each face of the walls on the ground and 2$^{nd}$ floors. On the 3$^{rd}$ floor, a 6-inch by 6-inch No.6 wire mesh is shown at the center of the wall.

Non-destructive testing did not detect reinforcing around the wall openings for Quad "F". The lateral capacity of the shear walls for Quad "C" may, therefore, be limited by the flexural capacity of the wall piers rather than by the shear capacity of the wall (since vertical reinforcing may not be present at the ends of the piers).

At the roof level, where the flexible wood diaphragm limits the allowable span between load-resisting elements, the concrete frames, spaced approximately 20 feet on center, must be used as part of the lateral system. Calculations on the capacity of the wood diaphragm are included in Appendix A. However, it does not appear from the existing drawings that adequate bracing is present to transfer loads from the roof diaphragm to the concrete frames.

## 3.2 Seismic Screening: Tier 2 Evaluation

According to FEMA Table 3-3, concrete frames with having a flexible diaphragm (at the roof), in a "High" region of seismicity and at a performance level designated as "Immediate Occupancy", cannot be evaluated by a Tier 1 checklist evaluation. A Tier 2 "full building" evaluation was, therefore, performed in accordance with TI 809-05 and FEMA 310 using the Linear Static Procedure. The Tier 2 evaluation is presented in Appendix A.

Based on the results of the Tier 2 evaluation, the following structural deficiencies were identified:

- The shear capacity of the wood roof diaphragm was exceeded;
- The shear and flexural capacities of the concrete frame beams and columns at the 3rd floor were exceeded; and
- The shear and flexural capacities of the exterior concrete shear walls were exceeded.

## 3.3 Seismic Retrofit Recommendations

The following seismic rehabilitation strategy proposes to eliminate the structural deficiencies identified in the Tier 2 evaluation while also incorporating AT/FP blast requirements for the exterior walls and the renovation concept plans and historical preservation criteria referenced. Documentation for the proposed rehabilitation is presented in Appendix B.

### *3.31 Roof System*

Replacement of the existing wood roof with a new metal deck roof and structural steel framing will provide sufficient diaphragm strength for the distribution of seismic forces to the transverse concrete frames below. The weight of the proposed roof system is comparable to the present system and will, therefore, not impose additional gravity and seismic loads to the supporting structure.

The roof system will also meet AT/FP blast requirements.

### *3.32 Exterior Walls*

The shear and flexural capacities of the exterior walls are improved by retrofitting with shotcrete applied to the interior surface of the wall. Positive connection to the existing structure is required for the entire wall to perform as designed. Additional wall reinforcing in the shotcrete increases the flexural capacity of the entire wall and its components.

Final wall thicknesses were selected to correspond with the AT/FP blast requirements. At the inner Quad walls (facing the courtyard), shotcrete was added primarily to improve the flexural performance of the wall and its components, by providing concrete cover for additional wall reinforcing. Retrofitted walls are presented in Figures 1 thru 12 at the end of this Section.

The exterior wall retrofit to the interior surfaces will also satisfy historical preservation criteria.

### *3.33 Added Transverse Walls*

Additional transverse concrete shear walls are required at the interior of the building to minimize seismic forces on the exterior walls and to reduce span-to-depth ratios of the floor diaphragms.

The added walls were aligned with the building grids and incorporated into the concept plans for the building renovations and are presented in Figures 1 thru 12 at the end of this Section.

### *3.34 Concrete Frames at the 3rd Floor*

Retrofitting one bay of each concrete transverse frame at the 3rd floor is required to transfer roof diaphragm forces to the supporting structure below. Additional interior shear walls at the 3rd floor were not considered, since the diaphragm capacity of the roof system would dictate a closer shear wall spacing than is practical.

## 3.4 Shear Wall Retrofit Figures (1-12)

The shear wall retrofit schemes for Buildings 355, 356, 357, and 358 are presented on the following Figures 1 thru 12.

FOR OFFICIAL USE ONLY

The Tier 2 evaluation includes the following:

- Dead and live load determination;
- Total building dead load and center of mass determination at each floor level;
- Seismic base shear and force distribution at each floor level;
- Roof diaphragm shear capacity check;
- Estimation of concrete frame rigidities and equivalent solid wall thicknesses;
- Rigidity calculations for shear walls with openings and equivalent solid wall thicknesses;
- Seismic shear distribution to walls based on rigid diaphragm analysis at each floor level and for the roof diaphragm in the longitudinal direction;
- Seismic shear distribution to walls and frames based on flexible diaphragm analysis for the roof diaphragm in the transverse direction; and
- Determination of shear and flexural capacities for walls and frames and comparison with the distributed seismic forces.

# ROOF DIAPHRAGM CHECK

SHEAR CAPACITY OF THE WOOD DECK ROOF IS A DEFORMATION-CONTROLLED ACTION:

FEMA Section 8.5.2

* For L/b = 20'/60.58' = 0.33 and Immediate Occupancy, m = 1

$mk V_{CE} \geq V_{UD}$

where m = 1

k = 1

Fp Diaph

Trib width for shear for frames @ 20' oc

$V_{UD} = (1625^k \times 10/363.33)(1/60.58)$

$= 738$ #/'

$V_{CE} \geq 738$ #/'

PER FEMA 273 Section 8.5.2.2, $V_{CE} = 120$ #/'

THEREFORE, WOOD DECK IS OVERSTRESSED

ANALYSIS OF TRANSVERSE FRAMES @ 20'-0" oc
AT 3RD FLOOR

FOR MOMENT FRAMES, MOMENTS ARE DEFORMATION - CONTROLLED:

$$M_{UD} = \cancel{Q_G}^{\,0\ (\text{load directly to columns})} \pm Q_E \quad \ldots\ldots \quad \text{FEMA 310 Eq (4-8)}$$

Expected strength

$$M_{CE} \geq M_{UD}/m$$

where $m = 3$ for $v \leq 3\sqrt{f'_c}$, Immediate Occupancy
$2.5$ for $v \geq 6\sqrt{f'_c}$

FOR MOMENT FRAMES, AXIAL AND SHEAR FORCES ARE FORCE-CONTROLLED:

$$P_{UF} = P_G \pm P_E/CJ \quad \ldots \quad \text{FEMA 310 Eq (4-9)}$$

and

$$V_{UF} = \cancel{V_G}^{\,0\ (\text{load supported on columns})} \pm V_E/CJ$$

where $C = 1.3$ for 1-story conc. fram (3rd Floor Only)

$J = 1.5 + S_{DS}^{0.6} = 2.1$, use 2.0 for IO

$$P_G = \begin{pmatrix} 1.1 \\ 1.1 \end{pmatrix} \begin{pmatrix} .0175 \\ .020 \times 25\% \end{pmatrix} (16 \cdot 38 \times 20) + 1.1 \times .150 \times (0.83)^2 (\overset{col}{6} + \overset{bm}{20})$$

$$= 11.1^k$$

ANALYSIS OF TRANSVERSE FRAMES @ 20'-0" ∝ AT 3RD FLOOR

BEAM CHECK (10"x10")

For a 1kip lateral load, (see RISA-2D output) $M_{max} = 2.5^{1-k}$

$V_{max} = 0.27^{k}$

Seismic force at roof, $F_{roof} = 1787.5^{k}$

Load to frame based on trib. area of flexible diaphragm $= 1787.5 \times 20/364$

$= 98.2^{k}$

$M_{UD}/m = (2.5 \times 98.2)/2.5 = 98.2^{1-k}$

check m:

$V / bwd\sqrt{f'c} = (0.27 \times 98.2)/(10 \times 7.5\sqrt{2500} \times 1.25)$

$= 6.3 > 6$, $m = 2.5$ ok

For 10"x10" beam w/ 3-#4

$b = 10"$

$d = 7.5"$

$f_y = 1.25 \times 40 = 50$ ksi

$f'c = 1.25 \times 2.5 = 3.1$ ksi

$a = \frac{A_s f_y}{.85 f'c\, b} = 1.14"$ ($3 \times .20$)

$M_{CE} = A_s f_y (d - a/2) = 208^{''-k}$

$= 17.3^{1-k} << M_{UD}/m$

∴ BEAM OVERSTRESSED IN FLEXURE

# RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: TYPICAL BUILDING

DATE: 02/07/03
TIME: 11:26 AM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH, F'c OR F'm = 2500 PSI

MODULUS OF ELASTICITY = 2850 KSI
SHEAR MODULUS = 1221 KSI

NOTE: CALCULATE R IF PIER IS SOLID. PROVIDE R IF PIER HAS OPENINGS.

WALL PORTION: GROUND FLOOR FRONT WALL

| MARK | [CANT/ FIXED] | THK (IN) | H (FT) | L (FT) | H/L | CALC R (K/IN) | PROV R (K/IN) | USE R (K/IN) | %R |

# *SEISMIC EVALUATION and REHABILITATION REPORT*

## *APPENDIX B: SEISMIC RETROFIT CALCULATIONS*

WHOLE BARRACKS RENEWAL
BRIGADE COMPLEX, PHASE 3A, QUAD C
FY03 MCA PN52068 & BUP 52069
SCHOFIELD BARRACKS, OAHU, HAWAII

February 2003

PREPARED FOR:

DEPARTMENT OF THE ARMY
U.S. Army Engineer District, Honolulu
Engineering Services Branch
Engineering and Construction Division
Fort Shafter, Hawaii 96858-5440

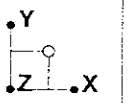
PREPARED BY:

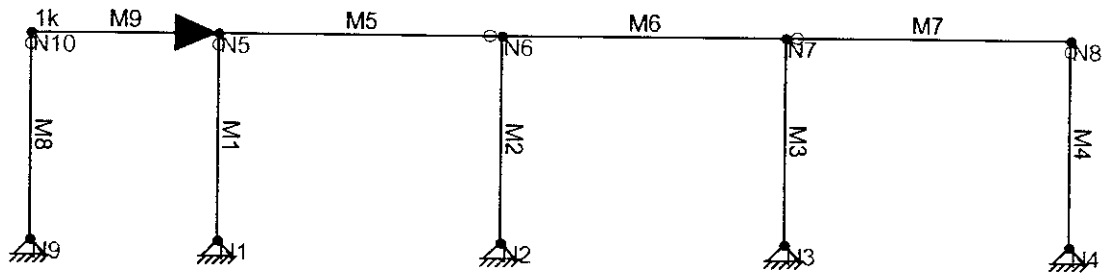
Mitsunaga and Associates, Inc.
747 Amana Street Suite 216
Honolulu, Hawaii 96814
Phone: (808) 945-7882 Fax: (808) 946-2563
Email: Mitsunaga003@hawaii.rr.com

FOR OFFICIAL USE ONLY

Documentation for the proposed seismic retrofit includes the following:

- Dead and live load determination;
- Total building dead load and center of mass determination at each floor level;
- Seismic base shear and force distribution at each floor level;
- Roof diaphragm shear capacity check;
- Estimation of concrete frame rigidities and equivalent solid wall thicknesses;
- Rigidity calculations for shear walls with openings and equivalent solid wall thicknesses;
- Seismic shear distribution to walls based on rigid diaphragm analysis at each floor level and for the roof diaphragm in the longitudinal direction;
- Seismic shear distribution to walls and frames based on flexible diaphragm analysis for the roof diaphragm in the transverse direction; and
- Determination of shear and flexural capacities for walls and frames and comparison with the distributed seismic forces.





Loads: BLC 1, LATERAL
Results for LC 1, LATERAL

DESIGN OF ONE-BAY FRAMES @ 20'-0" oc
AT 3RD FLOOR

FOR MOMENT FRAMES, MOMENTS ARE DEFORMATION-CONTROLLED:

$$M_{UD} = \cancel{M_G}^{\,0\ (\text{load directly to columns})} \pm M_E \quad \ldots\ldots \text{FEMA 273, Eq (3-14)}$$

Expected Strength:

$$M_{CE} \geq M_{UD}/m \quad \ldots\ldots \text{FEMA 273, Table 6-10}$$

$m = 2$ (Immediate Occupancy, IO)

FOR MOMENT FRAMES, AXIAL and SHEAR FORCES ARE FORCE-CONTROLLED:

$$P_{UF} = P_G \pm \frac{P_E}{C_1 C_2 C_3 J}$$

$$V_{UF} = \cancel{V_G}^{\,0} \pm \frac{V_e}{C_1 C_2 C_3 J}$$

$$P_G = \begin{pmatrix} 1.1 \\ 1.1 \end{pmatrix}\begin{pmatrix} .0175 \\ .020 \times 25\% \end{pmatrix}(16.58 \times 20)$$

$$+ 1.1 \times .150 \times (1.33)^2 (6 + 8.17)$$

$$= 12.3^k$$

$C_1 = 1.28$

$C_2 = 1$

$C_3 = 1$

$J = 1.0 + 5 \times 5^{-.6} = 1.6$

$$P_{UF} = 12.3 \pm 0.49\, P_E$$

# DESIGN OF ONE-BAY FRAMES @ 20'-0" oc AT 3RD FLOOR

## BEAM FORCES (16" x 24")

For a 1 kip lateral load, (See RISA-2D Output)

$M_{max} = 6^{1\text{-}k}$

$V_{max} = 0.735^{k}$

For flexible roof diaphragm in transverse direction, max. seismic force at 3rd Floor = $25.15^{k}$ (Bldg 356)

Load to frame based on trib area $= 25.15 \times 20/364$

$= 138^{k}$

$M_{CE} \geq M_{UD}/m = 138 \times 6/2 = 415^{1\text{-}k}$ — Use 419 1-k (PΔ effects)

$V_{CE} \geq 0.49\,V_E = 138 \times .49 \times .735 = 50.7^{k}$ — Use 51.2 k (PΔ effects)

check m:

$V/(b_w d\sqrt{f'_c}) = 51.2/(16 \times 21.5\sqrt{4000 \times 1.25})$

$= 2.10 < 3$ ok

* For non-conforming stirrups, with $\rho = \rho'$, $\boxed{m = 2}$

| | PROJECT: QUAD C | JOB NO. | SHEET OF |
| | | DATE | |

# ROOF DIAPHRAGM

SHEAR CAPACITY OF THE METAL DECK ROOF IS A FORCE-CONTROLLED ACTION:

FEMA 273 Sec. 5.8.1.3

$$V_{UF} \geq \cancel{V_G}^{\,0} \pm \frac{V_E}{C_1 C_2 C_3 J}$$

$C_1 = 1.28$

$C_2 = 1$

$C_3 = 1$

$J = 1.0 + S_{XS} = 1.6 < 2.00$ ok (0.6)

$V_{UF} \geq 0.49 V_E$

For flexible roof diaphragm in transverse direction, max. seismic force at 3rd Floor: 2515k (Bldg 356)

Diaphragm shear based on trib area: 2515x 10'/364'

(for frames @ 20'-0" oc, shear is ± 1/2 of span) = 69k/60.58'

= 1141 # per linear foot

Allowable capacity of deck

$V_{allow} = V_{UF}/2$ (SEE FEMA 273 Sec. 5.8.1.3)

$V_{allow} \geq 1/2\,(1141 \times .49) = 279\ \#/'$

∴ 22ga MIN. DECK ok

480#/' for button punch

**Title :** QUAD C **Job #**

**Dsgnr:** **Date:**

**Description :** Renovation of existing 3-story concrete buildings for seismic loads. The roof will be a new metal d

**Scope :** Perform torsional distribution of shear to walls for rigid diaphragm -- floors only.

# Rigid Diaphragm Torsional Analysis

**Description** QUAD C, BUILDING 355 -- 2ND FLOOR DIAPHRAGM

## General Information

| | | | | | |
|---|---|---|---|---|---|
| Y-Y Axis Shear | 7,511.00 k | Min. X Axis Ecc | 5.00 % | X Axis Center of Mass | 181.79 ft |
| X-X Axis Shear | 7,511.00 k | Min. Y Axis Ecc | 5.00 % | Y Axis Center of Mass | 28.16 ft |
| ...Shears are applied on each axis separately | | | | Max X Dimension | 363.33 ft |
| | | | | Max Y Dimension | 60.83 ft |

Title : QUAD C
Job #
Dsgnr:
Date:
Description : Renovation of existing 3-story concrete buildings for seismic loads. The roof will be a new metal d
Scope : Perform torsional distribution of shear to walls for rigid diaphragm -- floors only.

# Rigid Diaphragm Torsional Analysis

# RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: BLDG 355

DATE: 02/04/03
TIME: 09:27 AM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH*1.25, F'c OR F'm = 3750 PSI

REINFORCING STRENGTH*1.25, Fy 75000 PSI
SHEAR DEMAND MODIFIER, m = 2
FLEXURE DEMAND MODIFIER, m = 2

TOTAL WALL SHEAR = 1292 KIPS

*<< Use Grade 60 reinforcing in added shotcrete >>*

RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: BLDG 355

DATE: 02/04/03
TIME: 10:52 AM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH*1.25, F'c OR F'm = 3750 PSI

REINFORCING STRENGTH*1.25, Fy 75000 PSI
SHEAR DEMAND MODIFIER, m = 2
FLEXURE DEMAND MODIFIER, m = 2

TOTAL WALL SHEAR = 2209 KIPS

*<< Use Grade 60 reinforcing in added shotcrete >>*

# RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: BLDG 355

DATE: 02/04/03
TIME: 10:48 AM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH*1.25, F'c OR F'm = 3750 PSI

REINFORCING STRENGTH*1.25, Fy 75000 PSI
SHEAR DEMAND MODIFIER, m = 2
FLEXURE DEMAND MODIFIER, m = 2

TOTAL WALL SHEAR = 993 KIPS

*<< Use Grade 60 reinforcing in added shotcrete >>*

## Summary

| | | | | | | |
|---|---|---|---|---|---|---|
| X Distance to Center of Rigidity | 181.668 ft | Controlling Eccentricities & Forces from Applied Y-Y Shear | | | | |
| Y Distance to Center of Rigidity | 22.703 ft | Xcm + .05*Max-X - X-cr | = | 18.498 ft | Torsion = | 0.00 k-ft |
| | | Xcm - .05*Max-X - X-cr | = | -17.835 ft | Torsion = | 0.00 k-ft |
| X Accidental Eccentricity | 18.167 ft | Controlling Eccentricities & Forces from Applied X-X Shear | | | | |
| Y Accidental Eccentricity | 3.042 ft | Ycm + .05*Max-Y - Y-cr | = | 8.878 ft | Torsion = | 23,305.56 k-ft |
| | | Ycm - .05*Max-Y - Y-cr | = | 2.795 ft | Torsion = | 7,337.68 k-ft |

# RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: BLDG 356

DATE: 02/03/03
TIME: 10:51 AM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH, F'c OR F'm = 3000 PSI

MODULUS OF ELASTICITY = 3122 KSI
SHEAR MODULUS = 1338 KSI

NOTE: CALCULATE R IF PIER IS SOLID. PROVIDE R IF PIER HAS OPENINGS

WALL PORTION: GROUND FLOOR FRONT WALL

# RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: BLDG 356

DATE: 01/30/03
TIME: 09:11 AM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH, F'c OR F'm = 3000 PSI

MODULUS OF ELASTICITY = 3122 KSI
SHEAR MODULUS = 1338 KSI

NOTE: CALCULATE R IF PIER IS SOLID. PROVIDE R IF PIER HAS OPENINGS.

WALL PORTION: 3RD FLOOR BACK WALL

RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: BLDG 357

DATE: 02/03/03
TIME: 11:04 AM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH, F'c OR F'm = 3000 PSI

MODULUS OF ELASTICITY = 3122 KSI
SHEAR MODULUS = 1338 KSI

NOTE: CALCULATE R IF PIER IS SOLID. PROVIDE R IF PIER HAS OPENINGS.

WALL PORTION: GROUND FLOOR FRONT WALL

# RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: BLDG 357

DATE: 02/04/03
TIME: 06:32 PM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH*1.25, F'c OR F'm = 3750 PSI

REINFORCING STRENGTH*1.25, Fy 75000 PSI
SHEAR DEMAND MODIFIER, m = 2
FLEXURE DEMAND MODIFIER, m = 2

TOTAL WALL SHEAR = 3280 KIPS

*<< Use Grade 60 reinforcing in added shotcrete >>*

RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: BLDG 357

DATE: 02/04/03
TIME: 06:02 PM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH*1.25, F'c OR F'm = 3750 PSI

REINFORCING STRENGTH*1.25, Fy 75000 PSI
SHEAR DEMAND MODIFIER, m = 2
FLEXURE DEMAND MODIFIER, m = 2

TOTAL WALL SHEAR = 2752 KIPS

*<< Use Grade 60 reinforcing in added shotcrete >>*

WALL PORTION: 2ND FLOOR FRONT WALL

RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: BLDG 357

DATE: 02/04/03
TIME: 06:13 PM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH*1.25, F'c OR F'm = 3750 PSI

REINFORCING STRENGTH*1.25, Fy 75000 PSI
SHEAR DEMAND MODIFIER, m = 2
FLEXURE DEMAND MODIFIER, m = 2

TOTAL WALL SHEAR = 1224 KIPS

*<< Use Grade 60 reinforcing in added shotcrete >>*

WALL PORTION: 3RD FLOOR FRONT WALL

# RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: BLDG 357

DATE: 02/04/03
TIME: 06:26 PM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH, F'c OR F'm = 3000 PSI

MODULUS OF ELASTICITY = 3122 KSI
SHEAR MODULUS = 1338 KSI

NOTE: CALCULATE R IF PIER IS SOLID. PROVIDE R IF PIER HAS OPENINGS.

WALL PORTION: GROUND FLOOR BACK WALL

# RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: BLDG 358

DATE: 02/04/03
TIME: 04:05 PM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH*1.25, F'c OR F'm = 3750 PSI

REINFORCING STRENGTH*1.25, Fy 75000 PSI
SHEAR DEMAND MODIFIER, m = 2
FLEXURE DEMAND MODIFIER, m = 2

TOTAL WALL SHEAR = 3514 KIPS

*<< Use Grade 60 reinforcing in added shotcrete >>*

# RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: BLDG 358

DATE: 02/05/03
TIME: 06:51 AM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH*1.25, F'c OR F'm = 3750 PSI

REINFORCING STRENGTH*1.25, Fy 75000 PSI
SHEAR DEMAND MODIFIER, m = 2
FLEXURE DEMAND MODIFIER, m = 2

TOTAL WALL SHEAR = 2755 KIPS

*<< Use Grade 60 reinforcing in added shotcrete >>*

RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: BLDG 358

DATE: 02/04/03
TIME: 04:30 PM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH*1.25, F'c OR F'm = 3750 PSI

REINFORCING STRENGTH*1.25, Fy 75000 PSI
SHEAR DEMAND MODIFIER, m = 2
FLEXURE DEMAND MODIFIER, m = 2

TOTAL WALL SHEAR = 1219 KIPS

*<< Use Grade 60 reinforcing in added shotcrete >>*

# RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: BLDG 358

DATE: 01/30/03
TIME: 09:31 AM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH, F'c OR F'm = 3000 PSI

MODULUS OF ELASTICITY = 3122 KSI
SHEAR MODULUS = 1338 KSI

NOTE: CALCULATE R IF PIER IS SOLID. PROVIDE R IF PIER HAS OPENINGS.

WALL PORTION: GROUND FLOOR BACK WALL

# RIGIDITY DETERMINATION FOR WALL WITH OPENINGS

PROJECT TITLE: QUAD C
DESCRIPTION: BLDG 358

DATE: 02/04/03
TIME: 04:21 PM

CONCRETE OR MASONRY [C/M] = C
MATERIAL STRENGTH, F'c OR F'm = 3000 PSI

MODULUS OF ELASTICITY = 3122 KSI
SHEAR MODULUS = 1338 KSI

NOTE: CALCULATE R IF PIER IS SOLID. PROVIDE R IF PIER HAS OPENINGS.

WALL PORTION: SECOND FLOOR HALLWAY WALL w/ DOOR

# FOOD SERVICE DESIGN ANALYSIS

Mizo & Associates, Inc.
Food Facilities Consultants

**WBR Brigade Complex, Phase 3A**
**Quad "C", Schofield Barracks**
**Design Submittal**

**Food Service Narrative**
March 17, 2003

**Design Standard:**

- Standard Definitive Design for Enlisted Personnel Dining Facility (501 – 800 Person A La Carte) used as a guide in developing the floor plan.

**Programmatic Concerns:**

- Standard Definitive Design is directed for construction of new facilities. Quad "C" is a smaller existing facility with Historic Preservation Restraints.
- Existing facility cannot accommodate back of house s.f. requirements of Standard Definitive Design.
- Existing facility cannot accommodate dishwashing layout and flow patterns of Standard Definitive Design.

**Programmatic Design Solutions:**

Based on past experience with Division Food Services the following solutions were incorporated.

- Added soiled tray accumulator system. Existing facility could not accommodate the two soiled drop-off areas per Standard Definitive Design.
- Back of house requirements adjusted to accommodate existing facility.
- Adequate space was not available for carryout kitchen, designed for exterior order and pick-up, snack bar type operation.
- Card access system in lieu of a la carte service (cashier).

**Design Reviews:**

| | | | |
|---|---|---|---|
| Hawaii Review: | MSG Jimmy Neal<br>Food Program Management Office<br>25th ID (L) & USARHAW | Ft. Lee Review: | Wardell Carey<br>Army Center of Excellence, Subsistence<br>Ft. Lee, Virginia |

- MSG Neal design review meetings: 12/13/03, 1/16/03, 2/21/03 & 2/27/03 Final Approval (Refer to attached transmittals for submittal and approval documentation).
- Mizo & Associates request MSG Neal forward plans and equipment brochures to Mr. Wardell Carey for review (Refer to attached transmittals dated 2/21/03 & 2/27/03).
- Mizo & Associates 3/11/03 email to MSG Neal: Any comments from Mr. Carey? If not RFP package will request Contractor to include comments (Refer to attached email).
- MSG Neal email confirmation those drawings sent to Joe McKinney and that plans briefed to unit that will be responsible for the facility.

| Copies | Sheets | Description |
|---|---|---|
| 2 sets | 8 ea. | K-1 thru K-8 Equipment Schedule (Item Description) & Equipment Plans. |
| | | |
| | | |
| | | |

***Comments:***

For your review. Drawings have been revised per our last meeting and marked-up progress drawing dated 10/29/02. I have included 2 sets, one for your records and one for Wardell Carey's review. I will inform the DPW & the Architect that Mr. Carey will be reviewing kitchen plans.

I made a couple of changes to increase the dining seat count. With the revised plan the dining seat count is 300 seats, Standard DFAC Design indicates 372 seats. Is this adequate? My opinion is we're okay since this is an existing facility...please advise. Changes are:

1. Made offices smaller by using part of the area for the vendor office. The total office area ends up approximately 480 sf.
2. Created the enclosed dining area as requested. Space ended up a little larger because of the existing structural bearing wall.

Would you please request a quick turn around time response from Mr. Carey, DPW wants to issue RFP package asap. Once again, thanks for your assistance. Aloha!

Cc: Mitsunaga & Associates, Inc.

Irvin A. Mizo

| 10 ft. | 10 ft. | Two 60CH-2 |

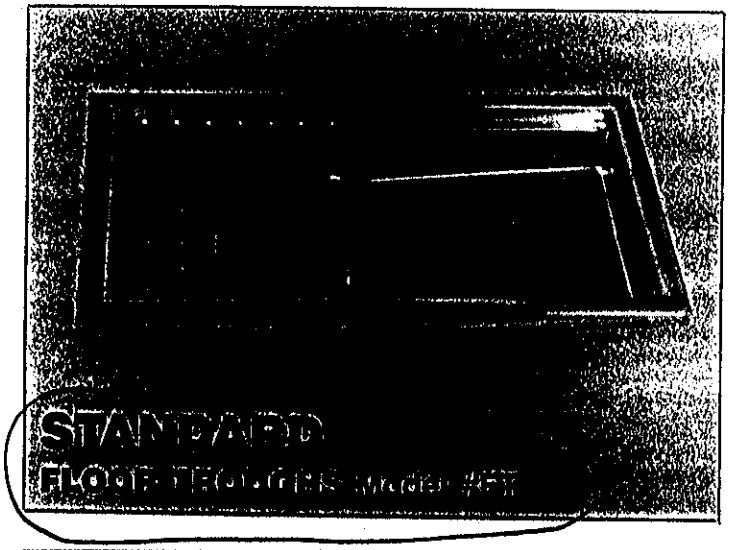
**OPTIONAL:** Micro Switch for automatic on/off operation. When door is opened, air curtain will start automatically and stop when closed. Three phase motors require magnetic controls when installing micro switch. All models have one second motor start to full capacity operation.

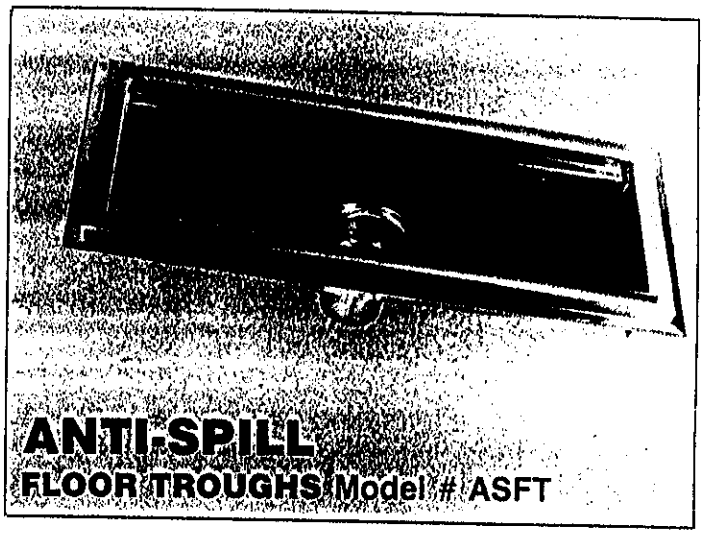
**HOUSING COLORS: WHITE** is standard production color. **GOLD, GRAY, BEIGE, DARK BRONZE** and any other decorator colors available upon request at a nominal charge.

TWO SPEED 1/2 H.P. MOTOR 115V OR 230V 1 PHASE AVAILABLE UPON REQUEST.
For unusual or problem door opening consult factory representative for suggestions regarding

ITEM #12

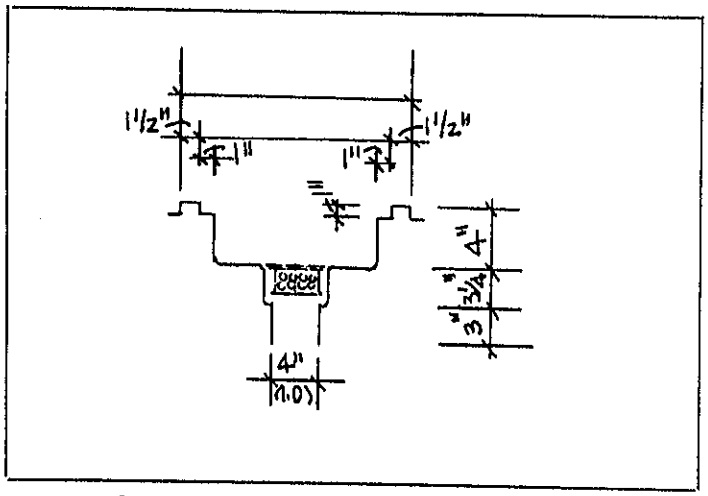
# STANDARD DEPTH FLOOR TROUGHS

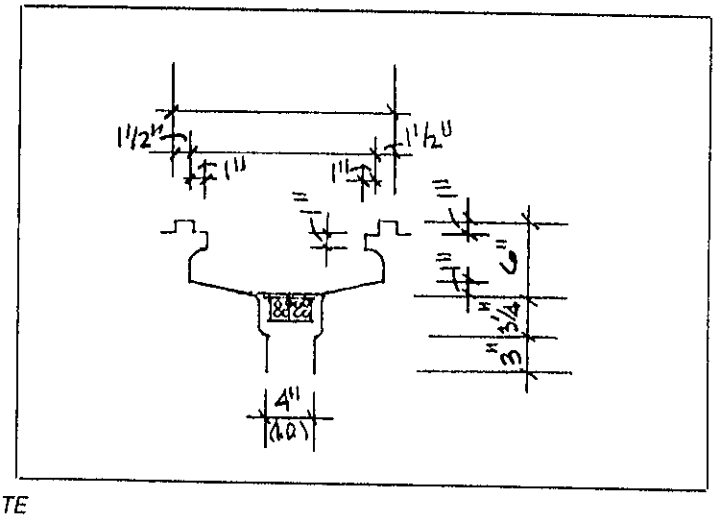




## CONSTRUCTION

All floor troughs are constructed of heavy duty 14 gauge stainless steel type 304- 18-8, completely welded and coved. All welds are ground & polished smooth. Troughs have built-in pitch towards wastes for complete drainage and anchor straps for securing. All troughs are fitted with special stainless steel waste cup with removable perforated stainless steel basket to accommodate up to 3″ waste pipe. Advise size and location of waste outlet.





*NOTE*

*For troughs less than 15″ wide 1½″ top edge will become ¾″.*

# GRATING FOR STANDARD TROUGHS

## SUBWAY GRATING/Model #SG

(All Type 304 Stainless Steel)

Grating to be constructed of 3/16″ x 1″ bars, set in a vertical position with open front and back for ease of draining.

Two (2) 1/2″ rods, set 3″ in from each edge, are wedged thru the bars full length. Three (3) 1/2″ rods are used for grating over 15″ wide.

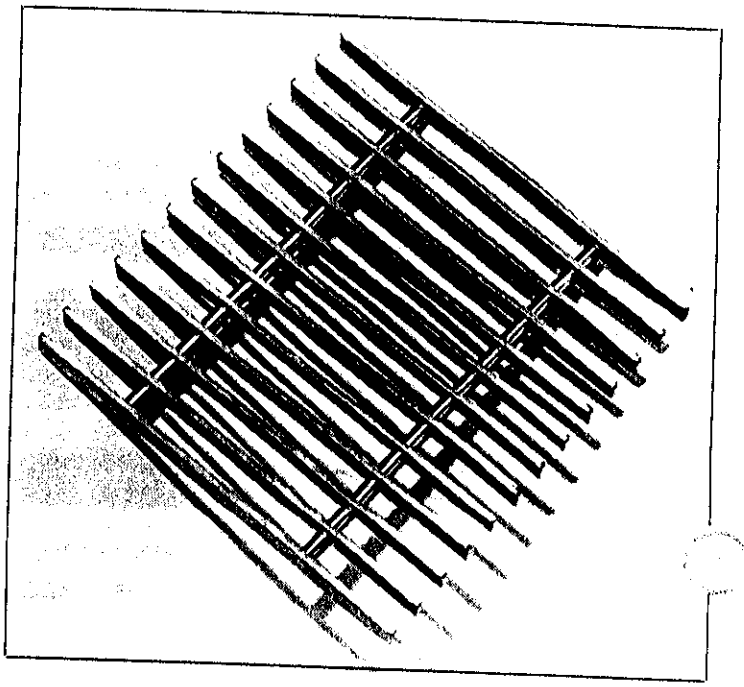
Rods are Heli Arc welded to each 3/16″ bar for rigidity thereby eliminating swaying and crevices.

There is 13/16″ clearance between bars so that wheels of mobile equipment will not become wedged.

Length of gratings are kept at maximum of 20″, for ease of handling and for cleaning in dishwasher.

(Longer lengths available upon request.)

(Bars can be had at any desired centers, specify)



## LOUVERED GRATING /Model #FG

Grating to be fabricated of 14 gauge 18-8 type 304 stainless steel.

Gratings are 1″ thick and have die formed louvers, one piece design with a #3 polished finish.

They are fabricated in approximately 20″ lengths and are easily removed for cleaning in dishwasher.

(Longer lengths available upon request.)

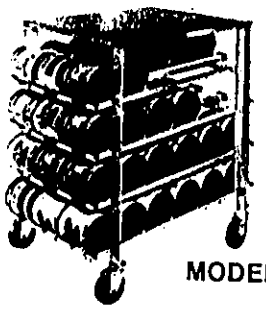
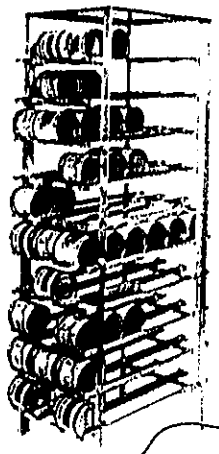
# CAN STORAGE RACKS

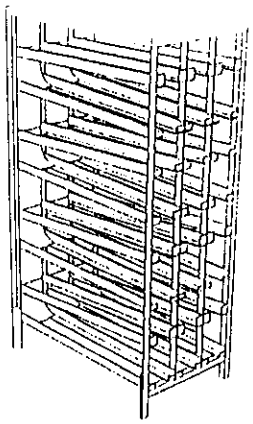
ERIES CSR



MODEL CSR-84-M



MODEL CSR-210



MODEL CSR-FF-156
Front Loading

## SPECIFICATIONS

Series CSR aluminum can storage racks.

**RAME:** The vertical corner uprights and the top and bottom cross bracing are constructed of all-welded 2" x 2" x ⅛" thick truded aluminum angles. The front and rear center uprights are 2" wide x ¼" thick aluminum, welded to the top and bottom cross ces. A solid top of either aluminum or stainless steel is securely fastened to all uprights.

**GUIDES:** The guides are 2" x 2" x ⅛" thick, formed aluminum angles with front and rear edges turned up ¾". The guides are welded to the uprights on 7¼" centers to accommodate No. 10 cans, with the rear of the guide 1½" higher than the front to allow the cans to roll forward.

**MODEL CSR-84:** The unit is mobile, mounted on four 5" diameter, heavy-duty, double ball bearing swivel casters with non-marking rubber tires. The top is 16 ga. stainless steel with all edges turned down 2". This unit is loaded from the rear.

**MODEL CSR-210:** The unit is stationary, mounted on four adjustable flanged feet welded to the uprights. The top is .060" thick aluminum with all edges turned down 2". This unit is loaded from the rear.

**MODEL CSR-308:** The unit is the same as Model CSR-210, except that it is constructed to accommodate No. 5 cans. The guides are set on 5-3/16" centers in lieu of 7¼". This unit is loaded from the rear.

**MODEL CSR-FF-156:** The unit is the same as Model CSR-210 except that it is front loading. The loading guides are inclined to the rear, where an aluminum deflector transfers the cans to unloading guides below which are inclined towards the front. Used where installation prevents rear loading.

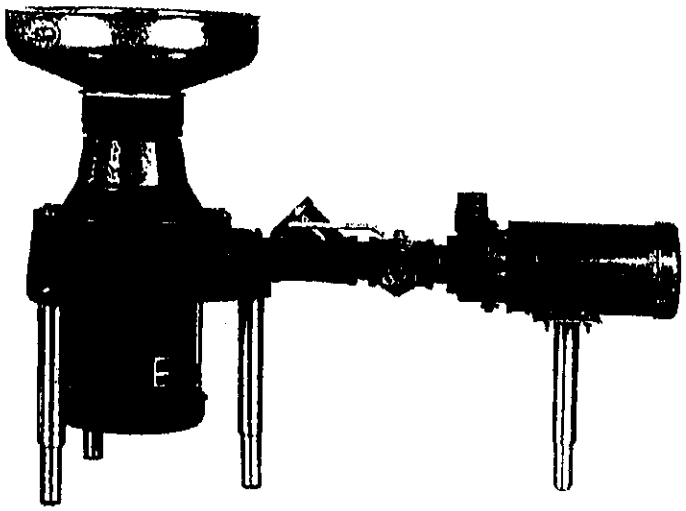
# somat®

## Remote Waste Pulping System



## Description

Standard SOMAT™ Model D-5 table mounted disposer, 18" stainless steel diameter bowl with disposer saver, 3 or 5 HP slurry pump, valve package, Som-A-Trol™ control panel, push button station.

## Benefits

- Up to 80% volume reduction
- Reduced labor cost
- Better sanitation
- Water conservation
- Improved operator morale

**Operation:** Foodservice waste enters the disposer via the bowl where it mixes with water, is processed and made into a slurry. The slurry, consisting of 5% solids and 95% water, is automatically transported through a pipeline to the Hydra-Extractor, where water is removed and the resultant semi-dry pulp is discharged into a haul-away container. The extracted water is recovered and returned to the disposer/slurry pump for re-use.

Somat equipment provides an economic and efficient answer to cutting the high and ever increasing costs associated with waste handling. Manufactured by Somat Corporation of Coatesville, Pennsylvania, originators of waste pulping systems and specialists in waste reduction technology.

**Approval:**

Item No. #15

SOMAT Model: **D-5 Disposer**

## Technical Specifications

**Disposer:** 5 HP disposer. 10" diameter cast stainless steel impeller. 3 jam resistant hardened stainless steel swivel cutting blocks with Tungsten carbide inserts. Stainless steel undercutter blade. 6 Ripper/Shredder bars and hard face beaded edge for prolonged life. Cast iron grind chamber with directional feeder ridges. Cast iron exit chamber with water injection inlet. Fan cooled motor with ball bearing construction. Hard, tough cast alloy grind ring with dual stage grinding action. Lifetime particle size control by non-wearing exit slots. Dynamically balanced for smooth long wearing operation. Screw type adjustable steel legs. Hush connection for 6" throat openings.

**Valve Package:** All valves required for proper operation (fresh water, bowl flush and drain lines).

**Som-A-Trol™ (Electrical Control Panel):** UL approved. Includes all necessary electrical components prewired to a terminal strip. Push button station in a NEMA 12 carbon steel enclosure.

**Options Available:**
(see accessory sheet for description)

- ☐ 6" Sink adaptor with disposer saver.
- ☐ NEMA 4 stainless steel Som-A-Trol
- ☐ Special electrical characteristics

**Electrical Characteristics:** 208/230/460 Volt, 3 Phase, 60 Hertz

**Capacity:** 400 pounds per hour of food waste only.

**Finish:** All exterior surfaces, except where polished stainless steel, are prime coated and finished with two coats of enamel paint.

Equipment only is supplied by SOMAT Corporation. Installation, piping and wiring is not included

## Single Section Roll-In Refrigerator- Solid Door

Model 2135

Randell Series 2000 Roll-Ins are built for years of efficient, high performance service. The top mounted, expansion valve refrigeration system offers the highest, most consistent performance available while maximizing usable interior space.

**FINISHES:**

☐ **Standard Series** **Doors/Louver:** Stainless steel.
**Exterior Sides:** Anodized aluminum. **Interior:** Anodized aluminum

☑ **E Series** Cabinet interior, exterior sides, fronts, and doors stainless steel.

ROLL THRU UNIT AVAIL.

NSF UL c UL

## Model 2135

### STANDARD FEATURES:

- Expansion Valve Thermostatic Control
- Top mounted Compressor & Evaporator Coil
- C.F.C. Free R-134a Refrigerant
- Efficient Hot Gas Condensate Evaporator
- Automatic Defrost
- 9' Cord & Plug
- Main Power Supply Switch
- Exterior Thermometer
- Self-Closing, Cam Lift Hinges with 120° Open Feature (Lifetime Warranty)
- Triple Hinged Doors
- Cylinder Door Locks
- Solid Core Stainless Steel Interior Bottom
- Polyurethane Insulation
- Snap-In Magnetic Door Gaskets
- Stainless Steel Interior Rack Guide
- Stainless Steel Removable Ramp
- Fully Coved Interior meeting N.S.F. Standard #7

### SPECIFICATIONS:

**CABINET EXTERIOR:** Cabinet body is constructed of all metal, inside & out. The top, bottom, & back are galvanized steel. Front and sides are available in finishes as listed above. Door and louver are stainless steel and are removable without tools. Provided with stainless steel removable ramp.

**CABINET INTERIOR:** Interior of cabinet is fully coved to meet N.S.F. standard #7. Solid core stainless steel interior floor is standard. The interior walls, ceiling and door liner are available in either stainless steel or anodized aluminum as listed above. Foamed in place, CFC free urethane insulation. Snap-in A.B.S. breaker strips allow access to condensate heater wires. Provided with stainless steel rack guide.

**DOORS:** Stainless steel front with either anodized aluminum or stainless steel liner, mounted on (3) heavy duty cam lift hinges with heavy duty chrome handle, and cylinder door lock.

**REFRIGERATION:** Top mounted condensing unit and evaporator coil, expansion valve system with thermostatic control, factory tested and balanced to maintain 38° F. average interior temperature utilizing CFC free 134a refrigerant. Evaporator coil is coated to resist corrosion. Unit supplied with master on/off switch and 9' cord and plug. Access to service points without tools is standard.

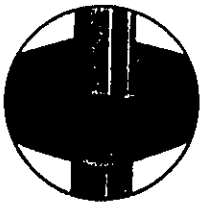
*Item #:* #17

*Model #:*

*Project #:*



*Featuring as Standard:*
**"THE PROVEN"**
ORIGINAL ADVANCE TABCO
**Adjustable Undershelf with Die Cast Leg Clamp**

### FEATURES:

Top is furnished with 1-5/8" sanitary rolled rim edges on 4 sides with rounded "bull nose" corners.

24" wide tables supplied with TWO hat channels stud welded to reinforce and maintain a level working surface. 30" and 36" wide tables supplied with THREE hat channels.

Pre-engineered welded angle adapters insure ease of future drawer installation.

Aluminum die cast "leg-to-shelf" clamp secures shelf to leg eliminating unsightly nuts & bolts. Undershelf is adjustable.

### CONSTRUCTION:

All TIG welded. Exposed weld areas polished to match adjacent surfaces.

Entire top mechanically polished to a satin finish.

Top is sound deadened.

Stud welded hat section reinforces and maintains a level working surface.

Gussets welded to support hat sections.

### MATERIAL:

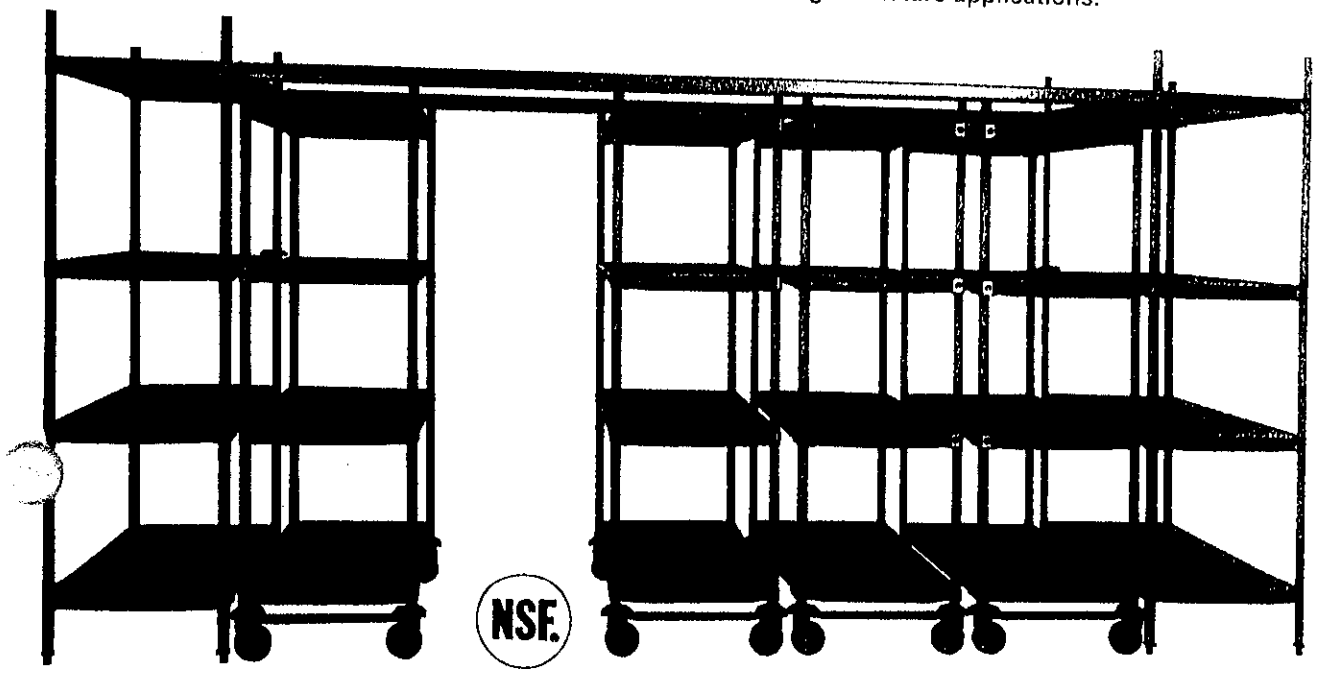
# COST-EFFECTIVE HIGH DENSITY STORAGE

**MetroMax® Top-Track™, with its open architecture and compliment of accessories, is the most versatile and cost-effective high-density storage system available. Rust proof and easy-to-clean, MetroMax Storage System components are perfect for high moisture applications.**



- **Maximizes Storage Capacity:** MetroMax Top-Track can increase the storage capacity of a given area by 30% to 40%. Mobile units are used between stationary units. Only one aisle, which can be opened between any two units as needed, is required. The MetroMax Top-Track Storage area incorporates far less aisle space and maximizes the usable storage area.
- **Cost Saving Performance:** This efficient utilization of space addresses the storage needs of new or growing operations. In a new facility, less square footage would have to be dedicated to storage. In growing operations, MetroMax Top-Track can eliminate the need to expand the facility to handle increasing storage requirements, greatly reducing the costs associated with a growing business's needs.
- **Improved Organization and Inventory Control:** MetroMax Top-Track allows better organization of stored goods and permits improved inventory control with one-stop delivery and pick-up.
- **Increased Productivity:** With reduced square footage dedicated to storage, MetroMax Top-Track maximizes the amount of productive "front of the house" space available, increasing daily revenues.
- **Safe/Accessible:** The overhead track system provides an unobstructed walking area within the system, eliminating potential safety hazards often caused by floor-mounted tracks. This also provides easy aisle access for utility carts, simplifying material handling tasks.
- **MetroMax System:** At the core of MetroMax Top-Track is the MetroMax Storage System, by far the most revolutionary and advanced system of its kind in the marketplace today. Incredibly strong, with materials that are backed by a lifetime warranty against rust, MetroMax lets you add a storage level at any time. Interchangeable solid and open grid mats, and a wide array of accessories, give it unequaled versatility.

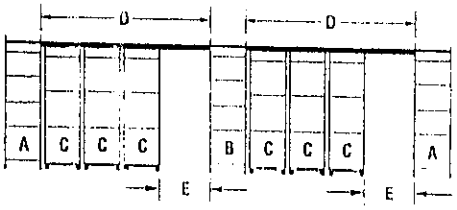
# METRO MAX® TOP-TRACK™ HIGH-DENSITY STORAGE SYSTEM

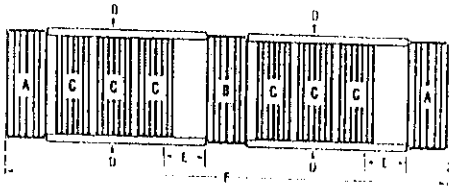
## SYSTEM COMPONENTS

A = Stationary End Units
B = Stationary Intermediate Unit (Optional)
C = Mobile Units
D = Track Set
E = Open Aisle
F = Overall System Length

### FRONT VIEW



### OVERHEAD VIEW



### STATIONARY UNIT KIT

Cat. No. TTSUX

Kit includes the hardware necessary for connecting track sets to two stationary end units or one intermediate unit. Kit components are stainless steel. Posts and shelves are sold separately. The stationary units require the use of 86" (2185mm) posts (86PX). A stationary intermediate unit is required when track length exceeds 21' (6405mm). A stationary intermediate unit may be used at the discretion of the user when track lengths are less than 21'. The stationary end and intermediate units must have a minimum of 4 shelves. The width of the stationary end and intermediate unit should be equal to or greater than the width of the mobile units.

### MOBILE UNIT KIT

One kit is required per mobile unit. Kit includes casters, caster channels, bumpers, and roller assemblies. Posts and shelves sold separately. If 18" (455mm) wide mobile units are planned, the maximum allowable size shelf is 60" (1525mm) long. If 18" wide by 60" long mobile units are planned, a maximum of 5-18" mobile units are allowable between two stationary units. 18" and 24" wide mobile units can be intermixed in a given system. The standard system requires 74" (1880mm) posts (74PX) on the mobile units. Recommended maximum load rating for a mobile unit is 900 lbs. (400kg). Floor should be level, smooth, and free from large cracks and raised obstacles.

| Shelf Width (in.) | (mm) | Cat. No. Chrome | Cat. No. Stainless Steel |
|---|---|---|---|
| 18 | 455 | TTM18ACX | TTM18ASX |
| 24 | 610 | TTM24ACX | TTM24ASX |

### TRACK SETS

Includes necessary sections of track for assembling track runs of 6' to 21' (1830mm-6405mm). Track sets are available in even 1' (305mm) increments. **Only one track set is required between stationary units.**

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 6' (1830mm) TTS6NX | 7' (2135mm) TTS7NX | 8' (2440mm) TTS8NX | 9' (2745mm) TTS9NX | 10' (3050mm) TTS10NX | 11' (3355mm) TTS11NX | 12' (3660mm) TTS12NX | 13' (3965mm) TTS13NX |
| 14' (4270mm) TTS14NX | 15' (4575mm) TTS15NX | 16' (4880mm) TTS16NX | 17' (5185mm) TTS17NX | 18' (5490mm) TTS618NX | 19' (5795mm) TT19NX | 20' (6100mm) TTS20NX | 21' (6405mm) TTS21NX |

### DIMENSIONS

**System Length:** Actual system length is equal to:

Nominal widths of end units + nominal track length + 1" (25mm). If stationary intermediate unit(s) is used, add 1" (25mm) per stationary intermediate unit.

Example: System contains 1 - 24" (610mm) wide end unit, 12' (3660mm) track length, and 1 - 18" (455mm) wide end unit. Actual system length equals 2'0" (610mm) + 12'0" (3660mm) + 1'6" (455mm) + 0'1" (25mm) = 15'7" (4750mm) actual system length.

Example: System containing 1 - 24" (610mm) wide stationary end unit, a 14' (4270mm) track length, 1 - 24" (610mm) wide stationary intermediate unit, a 12' (3660mm) track length, and 1 - 18" (455mm) stationary end unit. Actual system length is equal to 2'0" (610mm) + 14'0" (4270mm) + 2'0" (610mm) + 12'0" (3660mm) + 1'6" (455mm) + 0'1" (25mm) + 0'1" (25mm) = 31'8" (9652mm) actual system length.

**Aisle Width:** Under normal conditions, an aisle width of 30" to 36" (760mm - 914mm) is recommended. The storage of very large objects within the system, however, may require an aisle width larger than 36" (914mm). When determining aisle width, actual mobile unit widths must be considered. Actual mobile unit width is equal to the nominal mobile unit width 18" or 24" (455mm or 610mm) plus 2½" (64mm).

Example: A 12' (3660mm) track set is incorporated between stationary units. Desired aisle width is approximately 30" (760mm). 2-24" (610mm) wide and 3-18" (455mm) wide mobile units are selected. Actual width of each mobile unit is:

24" (610mm) + 2½" (64mm) = 26½" (674mm); 18" (455mm) + 2½" (64mm) = 20½" (519mm).

Overall actual track space utilized by mobile units is:
2 x (26½") + 3 x (20½") =
53" (1346mm) + 61½" (1562mm) = 114.5" (2908mm)

Overall track length equals 12' x 12" per foot = 144.0" (3658mm)
Space utilized by mobile units = 114.5" (2908mm)
Aisle space available = 29.5" (750mm) (or approximately 30" (760mm))

**Note:** If the MetroMax Top-Track System is to be installed for single side access with the rear of the unit against the wall, provide 5" (12.7cm) clearance between rear wall and system to allow for room variations and system dynamics.

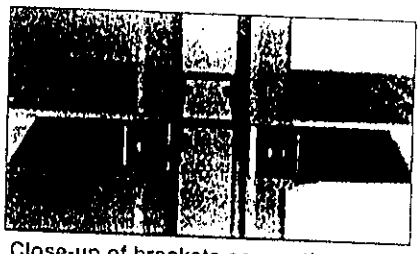
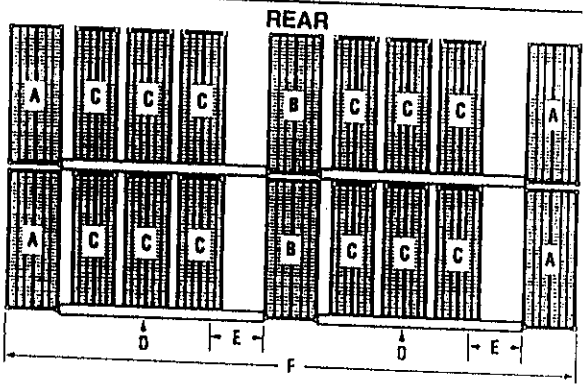
E = Open Aisle
F = Overall System Length

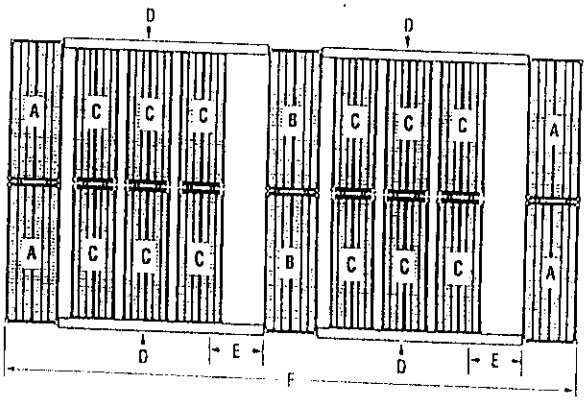


Close-up of brackets connecting units in Double Deep System end-to-end.

## SINGLE ACCESS



## DOUBLE ACCESS



### STATIONARY END UNIT KITS
Cat. No. LTTSUX

ONE KIT includes necessary components for connecting BOTH stationary end units of MetroMax Double Deep Top-Track to an overhead track set. **SHELVES AND POSTS SOLD SEPARATELY.** 86" (2185mm) posts required.

### STATIONARY INTERMEDIATE UNIT KITS*
Cat. No. LTTIUX

Includes hardware necessary for connecting intermediate stationary units in MetroMax Double Deep systems and connecting to an overhead track set on each side. **ONE KIT IS REQUIRED FOR INTERMEDIATE UNITS CONNECTED END-TO-END. SHELVES AND POSTS SOLD SEPARATELY.** 86" (2185mm) posts required.

*Required for track sets longer than 14' (4270mm).

### TRACK SETS

Includes necessary sections of track for assembling track runs of 6' to 14' (1830mm-4270mm). Track sets are available in even 1' (305mm) increments. **Only one track set is required between each pair of stationary units, including intermediate stationary units.**

| | | | | |
|---|---|---|---|---|
| 6' (1830mm) TTS6NX | 7' (2135mm) TTS7NX | 8' (2440mm) TTS8NX | 9' (2745mm) TTS9NX | 10' (3050mm) TTS10NX |

### MOBILE UNIT KIT

One kit is required per mobile unit. Kit includes casters, caster channels, bumpers, and roller assemblies. Posts and shelves sold separately. If 18" (455mm) wide mobile units are planned, the maximum allowable size shelf is 48" (1220mm) long. If 18" wide by 48" long mobile units are planned, a maximum of 5-18" mobile units are allowable between two stationary units. 18" and 24" wide mobile units can be intermixed in a given system. The standard system requires 74" (1880mm) posts (74UPX) on the mobile units. Recommended maximum load rating for a mobile aisle is 1200 lbs. (544kg), or 600 lbs. (272kg) per unit. Floor should be level, smooth, and free from large cracks and raised obstacles.

MetroMax® Double Deep Top-Track™ High-Density Storage Systems

Job_____

# METRO MAX® TOP-TRACK™ HIGH-DENSITY STORAGE SYSTEM

## CRITICAL DIMENSIONS

- **System Length:** Actual system length is equal to:

  Nominal widths of end units + nominal track length + 1" (25mm). If stationary intermediate unit(s) is used, add 1" (25mm) per stationary intermediate unit.

  Example: System contains 1 - 24" (610mm) wide end unit, 12' (3660mm) track length, and 1 - 18" (455mm) wide end unit. Actual system length equals 2'0" (610mm) + 12'0" (3660mm) + 1'6" (455mm) + 0'1" (25mm) = 15'7" (4750mm) actual system length.

- **System Depth:** Actual system depth for a **Single Deep** Top-Track System is equal to:

  Nominal Length of end and mobile units + 2½" (64mm).

  Example: System contains 60" (1525mm) long end and mobile units. Actual system depth equals 60" (1525mm) + 2½" (64mm) = 62½" (1589mm).

  Actual system depth for a **Double Deep** MetroMax Top-Track System is equal to:

  Nominal width of both end or mobile units + 4½" (115mm).

  Example: System contains 2 - 48" (1220mm) long end and mobile units. Actual system depth = 48" + 48" + 4½" = 100½" (2753mm).

- **Aisle Width:** Under normal conditions, an aisle width of 30" to 36" (760mm - 914mm) is recommended. The storage of very large objects within the system, however, may require an aisle width larger than 36" (914mm). When determining aisle width, actual mobile unit widths must be considered. Actual mobile unit width is equal to the nominal mobile unit width 18" or 24" (455mm or 610mm) plus 2½" (64mm).

  Example: A 12' (3660mm) track set is incorporated between stationary units. Desired aisle width is approximately 30" (760mm). 2-24" (610mm) wide and 3-18" (455mm) wide mobile units are selected. Actual width of each mobile unit is:

  24" (610mm) + 2½" (64mm) = 26½" (674mm); 18" (455mm) + 2½" (64mm) = 20½" (519mm).

  Overall actual track space utilized by mobile units is
  2 x (26½") + 3 x (20½") =
  53" (1346mm) + 61½" (1562mm) = 114.5" (2908mm)

| | |
|---|---|
| Overall track length equals 12' x 12" per foot | 144.0" (3658mm) |
| Space utilized by mobile units | 114.5" (2908mm) |
| Aisle space available | 29.5" (750mm) (or approximately 30" (760mm)) |

**Note:** If the MetroMax Top-Track System is to be installed for single side access with the rear of the unit against the wall, provide 5" (12.7cm) clearance between rear wall and system to allow for room variations and system dynamics.

## ACCESSORIES

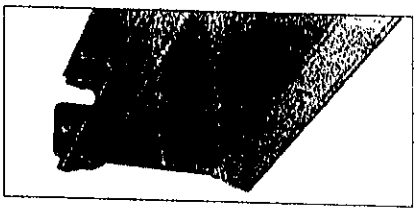

**Illustration of both the Top-Track Wall Mount Bracket Kit and Stop Kit**

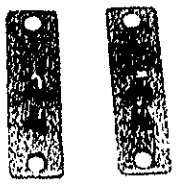
### MetroMax® Top-Track™ Wall Mount Bracket Kit

For use when mobile end unit is required for wall access, or, if access to rear of end unit is necessary.

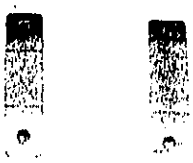
**NOTE:** Hardware for mounting bracket is not included due to wall construction variations.



Cat. No. TTWMX
(includes one pair of brackets for mounting one end of Top-Track System to wall)

### MetroMax® Top-Track™ Stop Kit

May be used in conjunction with the Wall Mount Bracket Kit to prohibit mobile end units from striking the mounting wall.



Cat. No. TTSTPX
(includes one pair of stops for one end of a system)

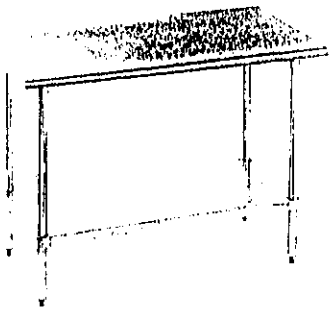
# WORK TABLES

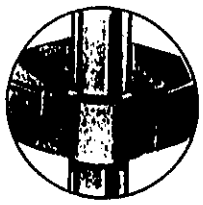
## PREMIUM Series - 1 1/2" Splash - UNDERSHELF Style



*Item #:* #21

*Model #:*

*Project #:*



*Featuring as Standard:*
**"THE PROVEN"**
ORIGINAL ADVANCE TABCO
**Adjustable Undershelf with Die Cast Leg Clamp**

NSF

### FEATURES:

Top is furnished with a 1 5/8" sanitary rolled rim edge on front, a 1 5/8" square bend on sides, and a 1 1/2" splash of single metal thickness on the rear side.

24" wide tables supplied with TWO hat channels stud welded to reinforce and maintain a level working surface. 30" and 36" wide tables supplied with THREE hat channels.

Pre-engineered welded angle adapters insure ease of future leveler installation.

Aluminum die cast "leg-to-shelf" clamp secures shelf to leg eliminating unsightly nuts and bolts. Undershelf is adjustable

### CONSTRUCTION:

All TIG welded. Exposed weld areas polished to match adjacent surfaces.

Entire top mechanically polished to a satin finish.

Top is sound deadened.

Stud welded hat section reinforces and maintains a level working surface.

Gussets welded to support hat sections.

### MATERIAL:

HOBART
FOOD EQUIPMENT

#23

• 6460
PEELER

# 6430 • 6460 PEELER

**SAVE TIME**
**SAVE WORK**
**SAVE FOOD**

Two stainless steel vegetable peelers loaded with features that meet these important kitchen needs . . . speed, no flats or bruising, reduced waste, gentle action. In three minutes or less the Models 6430 and 6460 will peel a full load of potatoes, carrots or other root vegetables.

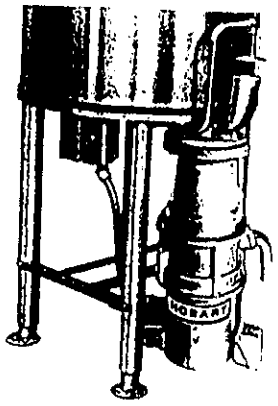
These peelers have a large disc made of durable reinforced plastic—not cast iron—with the abrasive permanently bonded to its surface. Bigger but lighter—actually weighs 48% less than the ordinary cast iron type. No struggling to remove this disc for cleaning.

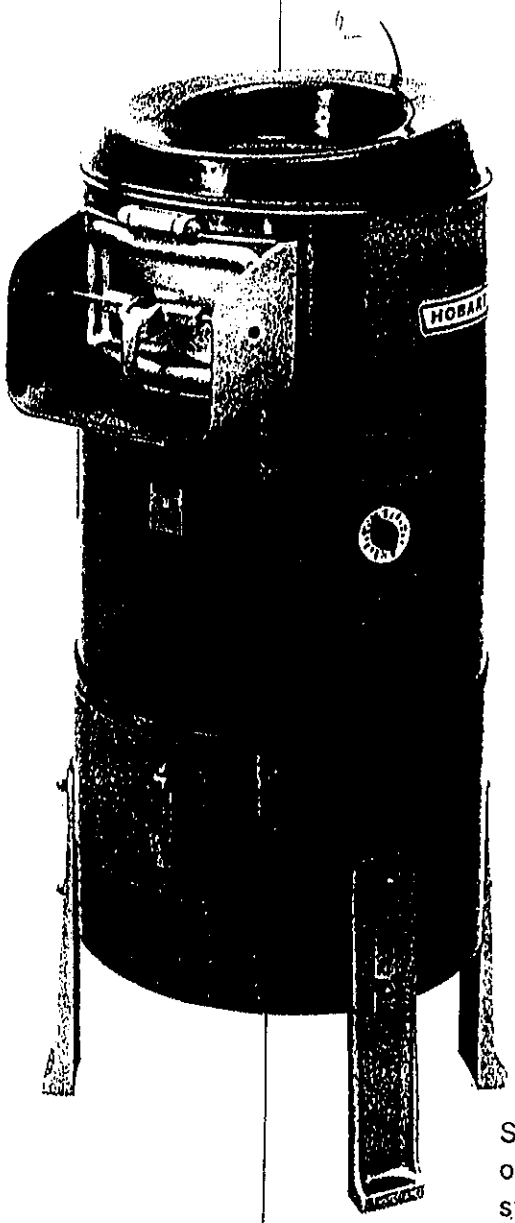
Convenience features, such as built-in peel trap, lock-on hopper cover, adjustable legs, and centralized controls make these Hobart Peelers a must for modern kitchens. Hopper with abrasives permanently bonded to its interior surface, insures constant rotation of vegetables. All combine to let you tailor this peeler to your kitchen needs.

**DISPOSER STAND** with stainless steel legs and four bolt-down adjustable, leveling feet permit installation of food waste disposer for Hobart Models 6430 & 6460. Permits continuous drain disposal of all peelings. (Peelers with stand, with or without disposer, not submitted for UL listing.) Stand is furnished with solenoid water control valve and air-gap type inlet.

Hobart Model FD2-50 with long upper housing Disposer, in single phase voltages below 250V. Specifically designed for use with the 6430 and 6460 peelers. (See illustration at right.)

Specifications, Details and Dimensions on Reverse Side.





Shown with optional peel strainer and trap.

# 6430 • 6460 PEELER

HOBART
FOOD EQUIPMENT

**SPECIFICATIONS** Listed by Underwriters Laboratories Inc and National Sanitation Foundation

**MOTOR:** ¾ H.P. Model 6430; 1 H.P. Model 6460. The motor features manual reset overload protection, grease-packed ball bearings, and ventilation within the peeler enclosure. Single phase is capacitor-start, induction run, and three phase is polyphase, squirrel-cage, induction-run type.

**ELECTRICAL SPECIFICATIONS:** 115/60/1, 200-230/60/1, 200-230/60/3, 460/60/3 UL Listed. 115/50/1, 220-240/50/1, 220-240/50/3, 380-415/50/3—Not submitted for UL Listing.

**SWITCH:** Manual tumbler type, located on right side of discharge chute as standard. Switch can be relocated to other side of chute if desired.

**TIMER—Models 6430T and 6460T:** Synchronous 4-minute timer, adjustable for any increments from ½ minute up to 4 minutes, with 15-second markings etched on a large timer dial. This timer is furnished only in single phase specifications as standard.

**DRIVE:** Multigrip, poly V-belt provides the direct speed reduction between motor and peeling disc. Belt adjustment may be accomplished from outside the machine. The stainless steel drive shaft is rigidly mounted [illegible]-packed ball bearings. Advanced [illegible]riple protection sealing prevents [illegible] water into shaft bearings.

**PEELER UNIT:** Cylindrical construction, heliarc-welded stainless steel with abrasive permanently bonded on interior surface of peeling hopper. A one piece, reinforced plastic molded, lightweight, easily removable, positive locking hopper cover is provided for easy cleaning. Quick-opening-removable aluminum hopper door and positive, cam-type pressure lock. Discharge chute is cast aluminum. To facilitate installation, the peeler unit can be positioned at 90° intervals, in relation to the peel trap unit.

**ABRASIVE DISC:** An extremely lightweight fiberglass reinforced plastic disc is 20½ inches in diameter. The silicon-carbide abrasive is permanently bonded to the disc, assuring unequaled long service. Disc can be easily and quickly removed for cleaning by removing the lightweight hopper cover. Two angle mounted wipers provide positive movement of waste into the outlet.

**OPTIONAL EQUIPMENT:**

☐ **PEEL TRAP UNIT:** This unit consists of a base, strainer and legs.

**BASE**—Constructed with a closed top which prevents moisture from entering motor and drive unit. The sloping bottom insures the diversion of water into a two inch male drain pipe connection.

**STRAINER**—The standard strainer has a stainless steel front and stainless steel rectangular drawer. The bottom of the drawer is removable for easy cleaning.

**LEGS**—There are four adjustable cast aluminum legs. The working height of the machine is 37" from the floor to the bottom of the discharge chute. The legs can be adjusted 13/16" to compensate for floor variations.

**WATER INLET:** The inlet is the air-gap type, mounted at the rear of the peeler unit at sufficient height to meet plumbing codes. The water from the inlet impinges on the curved surface of the hopper cover to form a fan pattern of water into the unit. This design promotes interior self-cleaning and forms a water curtain which prevents undesirable splash.

**WORKING CAPACITY:** Model 6430 peels 30-33 pounds in one to three minutes. Model 6460 Peeler peels 50-60 pounds in similar time.

**FINISH:** Peeler and peel trap unit are #4 polished satin-finished stainless steel. Plastic molded hopper cover is gray. Door and handle, discharge chute, and legs are cast aluminum and ball burnished for durability. Bottom of peeler unit is cushioned in resilient rubber trim molding.

As continued product improvement is a policy of Hobart, specifications are subject to change without notice.

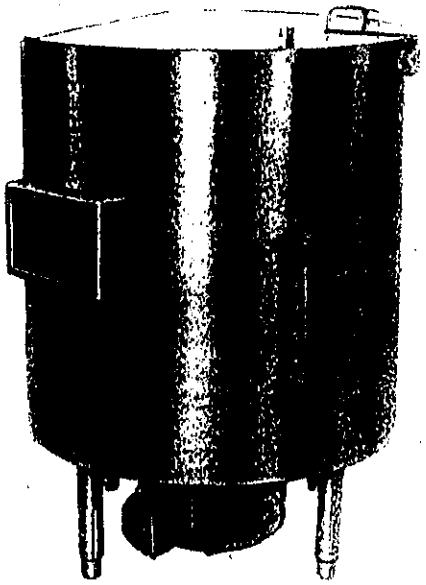
## Remote Waste Pulping System



## Description

Standard SOMAT™ Model SP-75S HT high tank pulper, hinged lid with limit switch, single trough connection, 3 HP or 5 HP slurry pump, valve package, Som-A-Trol™ control panel with water level control, push button station.

### Benefits

- Up to 80% volume reduction
- Reduced labor cost
- Better sanitation
- Water conservation
- Improved operator morale
- Reduced silverware loss
- Processes a wide variety of waste

**Operation:** Foodservice waste enters the pulping tank via the feed trough where it mixes with water, is processed and made into a slurry. The slurry, consisting of 5% solids and 95% water, is automatically transported through a pipeline to the Hydra-Extractor,™ where water is removed and the resultant semi-dry pulp is discharged into a haul-away container. The extracted water is recovered and returned to the pulping tank for re-use.

Somat equipment provides an economic and efficient answer to cutting the high and ever increasing costs associated with waste handling. Manufactured by Somat Corporation of Coatesville, Pennsylvania, originators of waste pulping systems and specialists in waste reduction technology.

**Approval:**

Item No. # 24

SOMAT Model: SP-75S HT
Pulper with trough connection

## Technical Specifications

**Pulper:** 30" diameter, 43" high polished stainless steel tank with feed trough connection and hinged lid with limit switch, 1/2" thick stainless steel slurry chamber, 7-1/2 HP TEFC direct drive motor, internal junk box and cutting mechanism. Cutting mechanism consists of a stainless steel 13-1/2" diameter impeller and stainless steel perforated sizing ring.

**Valve Package:** All valves required for proper operation (fresh water, trough flush and drain lines).

**Som-A-Trol™ (Electrical Control Panel):** UL approved. Includes all necessary electrical components prewired to a terminal strip; water level control and push button station, in a NEMA 12 carbon steel enclosure.

**Options Available:**
(see accessory sheet for description)

- ☐ Second feed trough connection
- ☐ Feed tray
- ☐ Feed tray cover
- ☐ NEMA 4 stainless steel Som-A-Trol
- ☐ Special electrical characteristics

**Special Requirements:**

- Dual water level control and motor operated valve with controls. Required if more than one pulper operating with a single Hydra-Extractor.
- Stainless Steel Dam. Required when pulper is located higher (one level minimum) than the Hydra-Extractor.

**Electrical Characteristics:** 208/230/460 Volt, 3 Phase, 60 Hertz

**Capacity:** 900 pounds per hour of foodservice waste mix, consisting of food scraps, plastics, milk cartons, paper, aluminum foil and cardboard.

**Finish:** All exterior surfaces, except where polished stainless steel, are prime coated and finished with two coats of enamel paint.

Equipment only is supplied by SOMAT Corporation; installation, piping and wiring is not included.

# Convert Your Table into a Effective Work Station!

## *Maximize Your Work Area!*

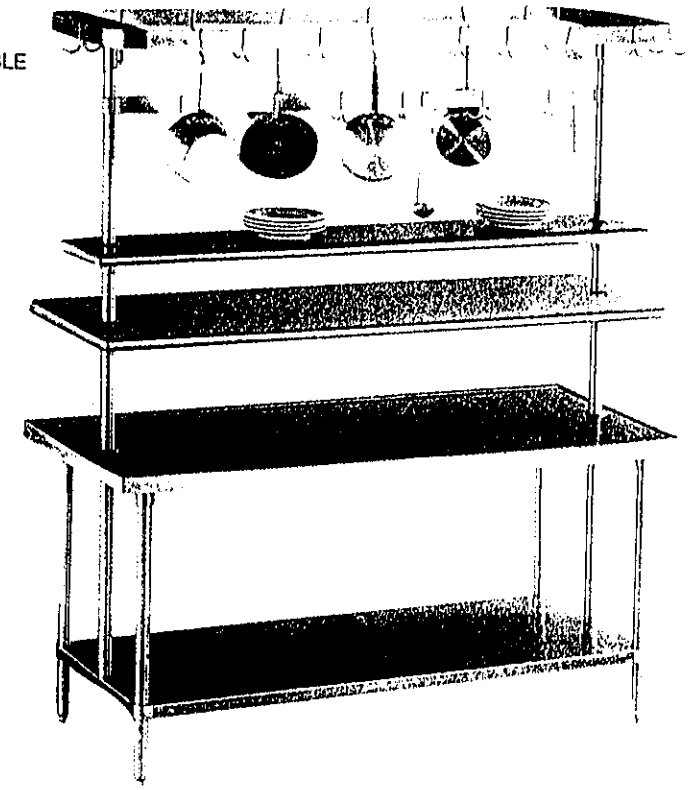
### Our TABLE with POT RACK, SHELVING & UTENSIL RACK

Utensil Rack is FULLY ADJUSTABLE

Select the SHELF WIDTH to satisfy your needs

Stainless Steel 1 5/8" diameter TUBULAR UPRIGHTS

Easy SHELF MOUNTING for ADDITIONAL RIGIDITY



Plated Pot Hooks

Pot Rack is ADJUSTABLE Maximum Height = 84" (A.F.F.)

Rolled Rim 4 sides

Shelves are ADJUSTABLE to meet your requirements

Only ONE support thru Table Top . . . Maximizes your working area

MID MOUNT DESIGN

## YES!!! . . . IT'S ADJUSTABLE

**Mix & Match** . . . . . your choice. We offer 3 basic components: SHELF - POT RACK - UTENSIL RACK.

**The Adjustable Solution** . . . . . components are adjustable. You set the height to meet your demanding requirements.

**Focus on Function** . . . . . available in 4 shelf widths, 2 pot rack styles, 10 lengths, and 1 utensil rack series.

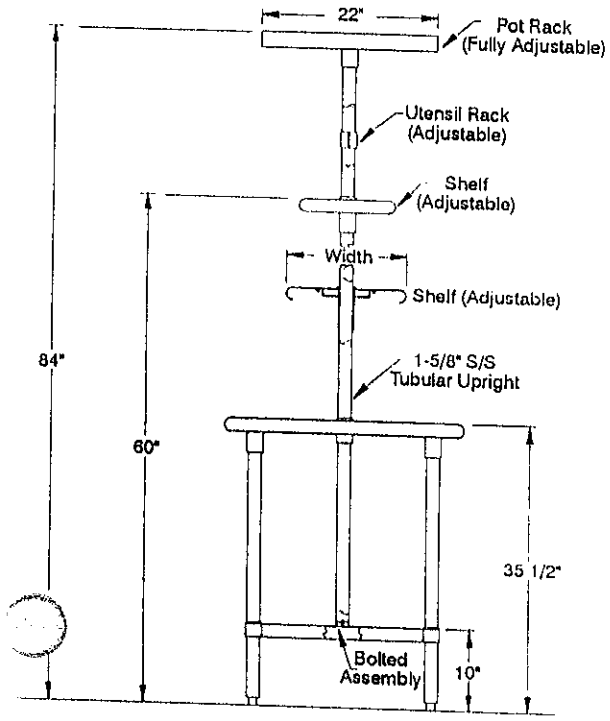
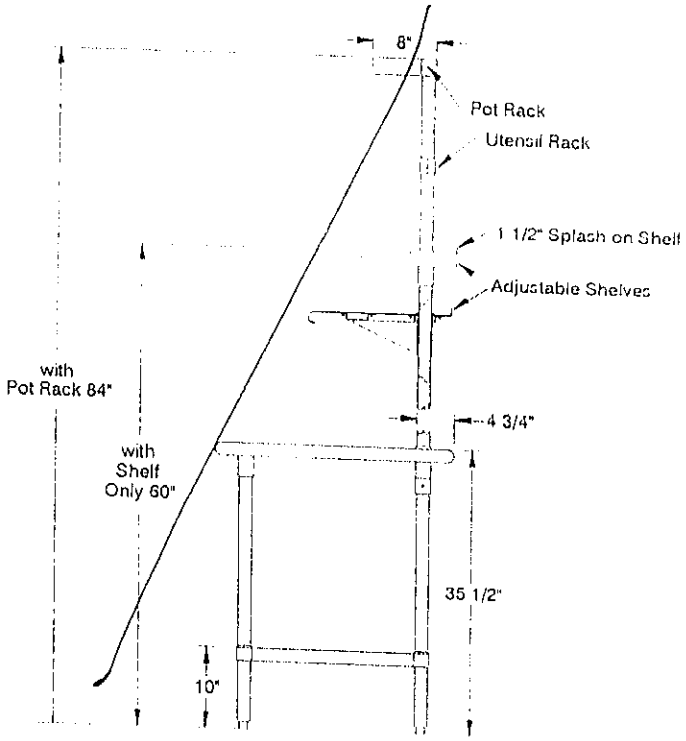
## TABLE with SHELVES, POT RACK & UTENSIL RACK

### MID-MOUNT INSTALLATION

### REAR-MOUNT INSTALLATION

Suggested Heights an Typical Installations

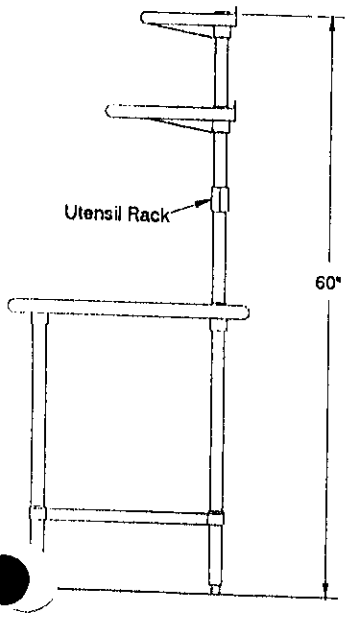




ALL DIMENSIONS ARE TYPICAL

A.F.F. = Above Finished Floor

### Table Mounted Shelf Installation



## DESIGN:

SHELVES, POT & UTENSIL RACKS are adjustable along a single tubular upright at each and of the table.

Gusset type SET SCREW LOCKING MECHANISMS are employed to secure in place.

HAT SECTIONS and ANGLE BRACKETS, where required, are supplied to insure a rigid and level working surface.

## MATERIAL:

SHELVES, POT & UTENSIL RACKS, HAT SECTION and GUSSETS are stainless steel.

## SHELF DESIGN:

MID-MOUNTED SHELVING UNITS are furnished with a roll rim edge on front and rear sides.

REAR & SPLASH MOUNTED SHELVING UNITS are furnished with a roll rim edge in front. Ends are square edged formed downward and rear edge is turned up to form a rear splash.

## CONSTRUCTION:

TIG welded with exposed areas ploished to match adjacent surfaces.

**Units originally supplied with OVERHEAD SHELVING can be adapted on the field to receive a POT RACK.**

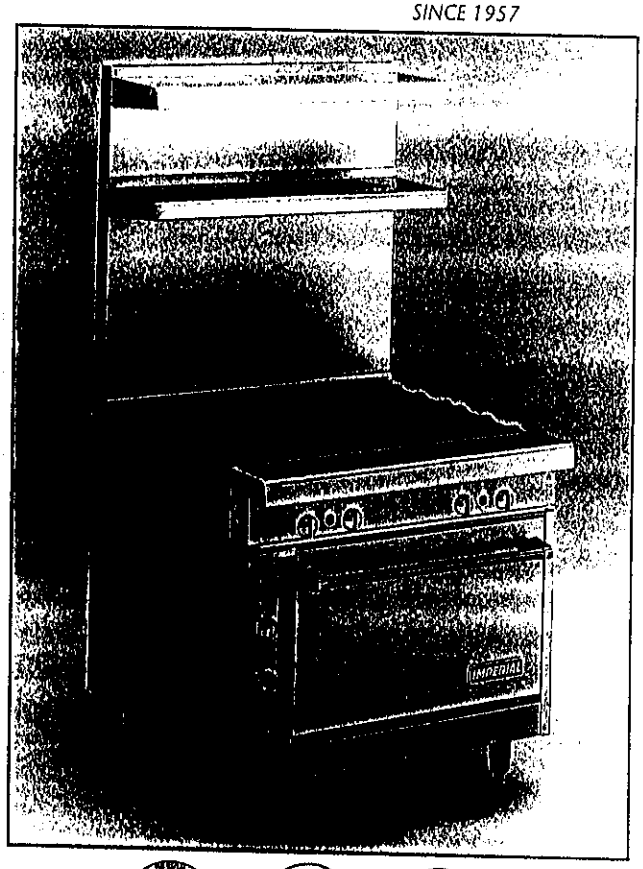
Item # #27

IMPERIAL

SINCE 1957

# IHR SERIES
# HEAVY DUTY RANGE



## 4 OPEN BURNERS

- ❑ MODEL IHR - 4
- ❑ MODEL IHR - 4-C

*Imperial heavy duty ranges are built for rugged use and long life. Contemporary styling and innovative design create a gleaming, uniform appearance. The heavy gauge, double-wall, tapered flame spreader distributes heat evenly in the large capacity oven. Snap acting oven gas controls provide rapid heat up. A one piece 18"W x 28"D heavy cast iron top grate is provided over two burners that are rated at 30,000 BTU/hr. each and controlled individually by a gas valve.*

### Standard Features

- *Heavy duty 12 gauge welded frame construction.*
- *All stainless steel front.*
- *Black enamel sides.*
- *1-1/4" manifold pipe in front for battery installation.*
- *6" legs with adjustable feet.*
- *One year limited warranty on parts and labor.*
- *AGA design certified and NSF listed.*

### Top Section Features

- *One piece heavy duty cast iron top grate (18"W x 28"D) every 18".*
- *4 open burners rated at 30,000 BTU/hr. each.*
- *One standing pilot for each burner.*
- *Removable one-piece drip tray.*
- *7"D stainless steel front landing ledge.*

### Standard Oven Features

- *Porcelainized interior includes side, rear, deck and door linings.*
- *Oven interior dimensions 26-1/2"W x 28"D x 14"H.*
- *40,000 BTU/hr. oven burner with standing pilot.*
- *100% safety pilot.*
- *Controls on side in cool zone.*
- *Manual oven shut-off valve.*
- *Heavy duty thermostat with temperature range from 150°F to 500°F.*
- *Heavy duty oven door.*
- *One chrome-plated oven rack.*

### Convection Oven Features *(Add suffix "-C")*

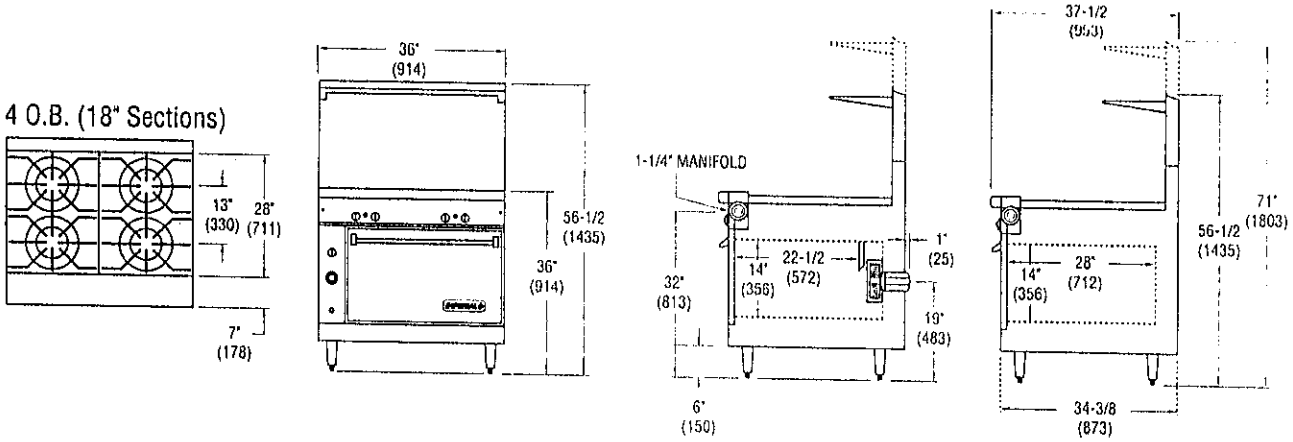
- *Porcelainized interior includes side, rear, deck and door linings.*
- *Oven interior dimensions 26-1/2"W x 22-1/2"D x 14"H.*
- *Three heavy duty steel chrome-plated racks supported by chrome-plated rack guides.*
- *Electric thermostat with 150° F to 500° F range.*
- *Oven burner rated at 35,000 BTU/hr. with electronic spark pilot ignition.*
- *Three position switch for cooking or 'cool down'.*
- *Burner "ON" indicator light.*
- *One hour manual timer.*
- *Fan shuts off automatically when door is open.*
- *1/4 HP, 1725 RPM blower motor (120 VAC - 60 Hz - 1 Ph) with 5 Amp draw.*
- *Provided with 3 prong 6 foot power cord.*

**IMPERIAL** Commercial Cooking Equipment *1560 Flower Street, Duarte, CA 91010*
*Phone (626) 357-7411 Fax (626) 359-5909*

# MODEL ❑ IHR - 4, ❑ IHR-4-C

## Available Options *(At Additional Cost)*

- ❑ *6" stub back, 17" backguard, or various high backguards - black or stainless steel.*
- ❑ *Single or double deck S/S high shelf.*
- ❑ *One piece common high shelf, backguard, and front landing ledge for battery line-up*
- ❑ *Reinforced backguard to mount ICMA series Infrared Cheesemelter or ISB-36 Salamander Broiler.*
- ❑ *Modular or storage base unit.*
- ❑ *Stainless steel sides.*
- ❑ *Swivel casters (Front two are locking).*
- ❑ *Gas pressure regulator.*
- ❑ *Rear gas connection.*
- ❑ *Gas shut off valve (specify size)*
- ❑ *Quick disconnect and flexible gas hose*



Convection Oven Base

Standard Oven Base

*Bracketed dimensions are in millimeters (mm).*

**Crated Dimensions:** *Standard and Convection Oven - 37" (940) W x 39" (991) D x 35" (889) H.*

**Gas:** *Manifold pressure is 5.0" W.C. for natural gas or 10.0" W.C. for propane gas. Specify type of gas and elevation if over 2,000 feet.*

**Clearances:** *For use only on non-combustible floors. Provide 0" from non-combustible walls, sides and rear, 8" from combustible wall at sides and 4" from combustible wall at rear.*

**Note:** *The unit must overhang 2" in the front, when installed without legs or casters on non-combustible curb. An appropriate size pressure regulator must be installed in the gas line for a single unit or group of units.*

| Model No. | Description | Total BTU | Ship Wt. | |
|---|---|---|---|---|
| | | | lbs | kgs |
| IHR - 4 | (4) Open Burners, Standard Oven | 160,000 | 590 | 268 |
| IHR - 4-C | (4) Open Burners, Convection Oven | 155,000 | 650 | 295 |

*Add Suffix "-XB" to model number for storage base.*
*Imperial Manufacturing reserves the right to change specifications without prior notice.*

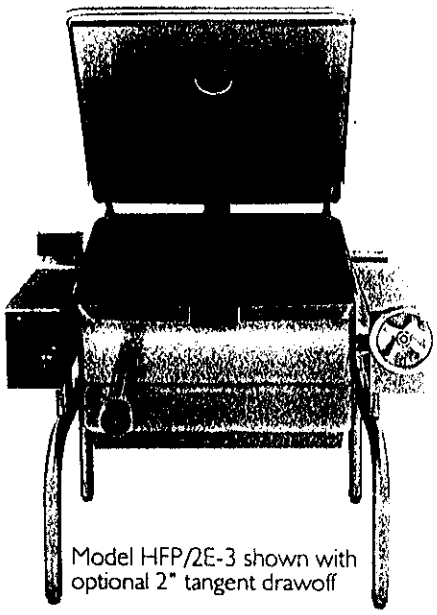
# HFP/2E

GROEN

ITEM #28

## Stainless Steel Manual Tilting Braising Pan

## Open Leg Gas Heated 23, 30 and 40 Gallon Capacity



Model HFP/2E-3 shown with optional 2" tangent drawoff

### Short Form

Groen Model HFP/2E stainless steel gas heated thermostatically controlled, open tubular leg braising pan per Bulletin 15E. Heavy ⅝" thick stainless steel clad pan bottom with patented gas burner/combustion chamber and specially designed heat transfer fins which deliver a 60-65% efficiency rating. Electronic ignition is standard, standing pilot an available option. (Available 42" 49" or 59" wide with a 9" deep pan.) Smooth action manual tilt mechanism, heavy duty cover with condensate drip diverter and cover vent standard. NSF listed and AGA design certified. ½" NPT gas connection required and standard electric spark ignition requires 115 Volt, single phase, 60 Hertz, 3 AMP service. Made in U.S.A.

### Description

Braising pan shall be a Groen Model HFP/2E open leg, gas heated, manual tilting braising pan [Specify (23 gallon) Model HFP/2E-2; (30 gallon) Model HFP/2E-3; or (40 gallon) Model HFP/2E-4] with 9" deep pan, per Bulletin 15E as follows:

### Construction

The pan body shall be of type 304 stainless steel, solid one-piece welded heavy duty construction, with 9" pan depth. All exposed surfaces shall be of stainless steel.

The cooking surface is a heavy ⅝" thick stainless steel clad plate with welded heat transfer fins, heated by the specially designed and patented gas burner/combustion chamber. This combination delivers more uniform heat transfer over the entire cooking surface. The heavy plate prevents warping or distortion. (SEE OPERATOR'S MANUAL FOR PROPER WARMUP SETTINGS).

Controls and tilt mechanism are mounted in stainless steel housings, on either side of the pan body. Unit shall come standard with holes for either right or left side faucet mounting.

### Finish

Interior of braising pan shall be polished to a 180 emery grit finish. Exterior of braising pan shall be finished to a bright high buff finish, ensuring maximum ease in cleaning and maintaining brilliant appearance.

### A.G.A. & C.G.A. Design Certification

Unit shall be design certified by the American Gas Association and the Canadian Gas Association.

### CE Models

CE approved models available. Contact factory.

### Sanitation

Unit shall be designed and constructed to meet NSF and known health department and sanitation codes and be NSF listed. True open leg tubular design and 3" radius pan corners make cleaning easier.

### Manual Tilt

The unit shall have an easy operating smooth action manual crank tilt mechanism which provides precise control during pouring of pan contents. Pan body shall tilt past vertical to assist in cleaning.

### Vented Cover

A heavy gauge one piece cover is standard with counterbalancing spring assisted actuator, designed to maintain the cover in an open or closed position. A vent is provided in the cover top to regulate condensate buildup and a rear condensate drip shield is located under the cover to prevent condensate from dripping on floor when cover is opened.

### Controls

Operating controls include left console mounted power-ON switch, power-ON indicator light, HEATing indicator light, electronic timer with TIMING and DONE lights; plus thermostat mounted in its own left rear control box.

### Performance/Features

Unit to be thermostatically controlled to automatically shut off when desired temperature is reached and to turn on when product temperature falls below desired setting.

Model HFP/2E-2 has a firing rate of 80,000 BTU/hr with a heat rate into product of 52,000 BTU/hr. Model HFP/2E-3 has a firing rate of 104,000 BTU/hr with a heat rate into product of 67,600 BTU/hr. Model HFP/2E-4 has 144,000 BTU/hr firing rate and 93,600 BTU/hr heat rate into the product for an energy efficiency rating of 60-65%.

Electronic intermittent ignition system for pilot standard.

### Installation

Unit requires ½" NPT gas connection. Requires one 115 Volt, single phase, 60 HZ, 3 AMP connection. **No electric connection is required if standing pilot option is ordered.**

### Options/Accessories

- ❑ REJ steamer pan inserts
- ❑ Water fill faucet with swing spout
- ❑ Steamer pan carrier (Model BPC)
- ❑ Standing pilot ignition (Model HFP/2)
- ❑ 2" Tangent drawoff
- ❑ Casters and gas quick connects
- ❑ Right and/or left mounted fold down pan supports

### Origin of Manufacture

Braising Pan shall be designed and manufactured in the United States.

### Applications

*Braising meat*
*Pan frying chicken*
*Asian stir-fry*
*Steaming vegetables*
*Frying short order items*
*Sauteing*
*Sauces/Roux*
*Roasting turkeys*
*Boiling*
*Simmering*
*Thawing*
*Reheating prepared foods*

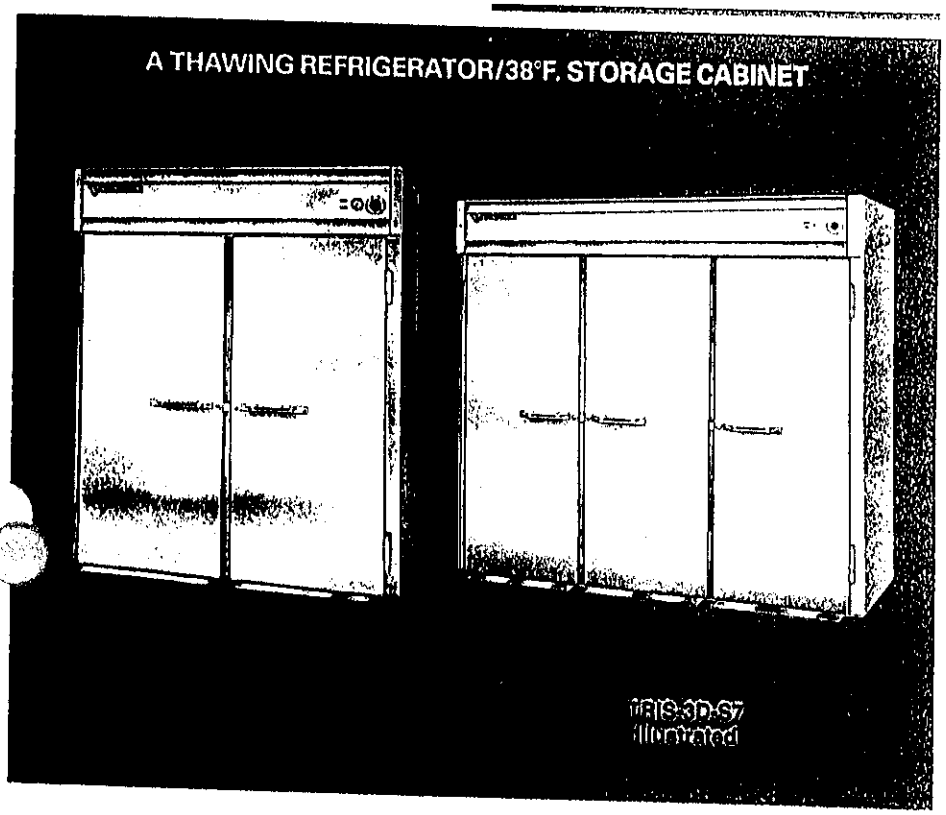
# Rapid Thaw® Roll-In Thawing Cabinets

**TRIS MODELS —**
Stainless steel exterior and interior.

TRIS-2D-S7
~~TRIS-3D-S7~~



## Standard Features

- Two Operational Features
  - Thaw processing Refrigerator
  - 38°F. Storage Freezer
- Operational Indicator Panel with
  - Visual Alarm System
  - Temperature Sensing Dial
  - Power Indicator Light
  - Thaw Timer
- Stainless Steel Case Front and Door(s)
- Heavy Duty Cam Lift Hinges
- Safety Grip Handle(s)
- Self Closing Doors with Safety Stops
- Energy Saving Thermal Breaker Strips
- Heavy Duty Cylinder Locks
- One Piece Self-Adjusting Magnetic Door Gaskets
- High Impact ABS Interior Door Liner
- Plasticized Fin Coil
- Condensate Automatically Evaporated
- Energy Efficient Refrigeration System

## Optional Features and Accessories

- Change Door Swings
- Stainless Steel Case Back
- Remote and Pass-Thru Models Available

**Cabinet:**
The cabinet front and doors are constructed of heavy gauge polished stainless steel to maintain an attractive appearance after years of heavy use. Foamed-in-place polyurethane insulation throughout the cabinet and doors ensures the ultimate in energy efficiency.

**Doors:**
Each self-closing door has rugged cam-lift hinges, a heavy duty cylinder lock and a self-adjusting magnetic gasket to prevent the cold air from escaping. Humidity control wires located around the door jamb prevent condensation from forming on the cabinet front and are concealed by a high impact, non-conductive thermal breaker strip. The interior door liner is constructed of durable ABS material.

**Refrigeration System:**
The air circulating fans and plasticized, finned, forced convection coil are contained within a top mounted housing. During the thaw cycle, this system uses high velocity convected air and a patented system of alternating cycles of heating and refrigeration. Auxiliary fans with safety grilles, located in a center mullion, are automatically activated at the start of the thawing cycle. During the thaw cycle, air temperature never exceeds 43°F. Upon completion of the cycle, the fans stop automatically, converting the cabinet to a storage refrigerator. The refrigeration system has sufficient capacity to maintain cabinet temperatures of +38°F. to +40°F. when operating in an ambient temperature of +100°F. All condensate water is removed by a vaporizer located in the top of the cabinet.

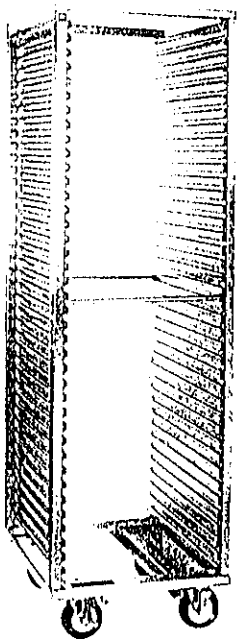
# CORRUGATED SIDEWALL ROLL-IN REFRIGERATOR RACKS 208 SERIES

## (FOR 18" X 26" PANS)

### FEATURES AND BENEFITS:

- Durable rack specifically designed to fit roll-in or pass through refrigerators, freezers, and warming cabinets; eliminates unnecessary product handling while maintaining proper temperature levels. Holds 18" x 26" pans.
- Fully welded framework of structural aluminum extrusions for rigidity and durability.
- Constructed of non-corrosive, Hi-Tensile aluminum for strength.
- Corrugated sidewalls securely hold 18" x 26" pans on 1-1/2" centers without tipping. Provides added strength.
- Inboard heavy duty 5" swivel casters, two with brakes. Wheel placement permits easy "in-and-out" of roll-ins.
- Two styles available; Custom (C) or Deluxe (D). Deluxe includes perimeter bumper and enclosed base.



208-1835-C

NOTE: Send sample pan or tray with order when using any that are not 18" x 26" pans with heavy beaded edges.

ALL ALUMINUM CONSTRUCTION IS RIVETED, WELDED AND FINISHED.

**RACK:**
- Posts: Extruded channels, 1-1/16 x 2 x .125.
- Top and bottom: Extruded channels, 1-1/16 x 2-3/8 x .188; welded to posts.
- Tie rods (2): 5/16 dia. steel rods enclosed in aluminum tubing; fastened to posts.
- Sides: .063 aluminum corrugations riveted to posts.
- Bolsters: Formed .190 aluminum; welded to posts, casters attached.
- Casters: 5" dia., swivel, neoprene tires, 1-1/4 wide, load cap. 200 lbs. each, temp. range -20°/+160°F. Bearings are sealed and permanently lubricated. Two casters equipped with brakes.

**DELUXE ("D") MODELS:**
- Base plate: One piece .063 aluminum.
- Bumper: 1" wide gray rubber, perimeter type.

**PAN SLIDES:**
- Corrugations act as pan slides on 1-1/2" centers.

### SHORT FORM SPECIFICATIONS

Cres-Cor Roll-In Refrigerator Rack Model 208-1835- (C) or (D). Extruded aluminum welded construction. Tie rods (2) applied at front and rear. No-tip corrugated sides for (35) 18" x 26" pans on 1-1/2" centers. Inboard 5" swivel neoprene casters, permanently lubricated, sealed ball bearings. Load capacity 200 lbs. each, temperature -20° to +160°F.

❑ Custom Model (C)
❑ Deluxe Model (D) has .063 aluminum base plate; perimeter bumper.

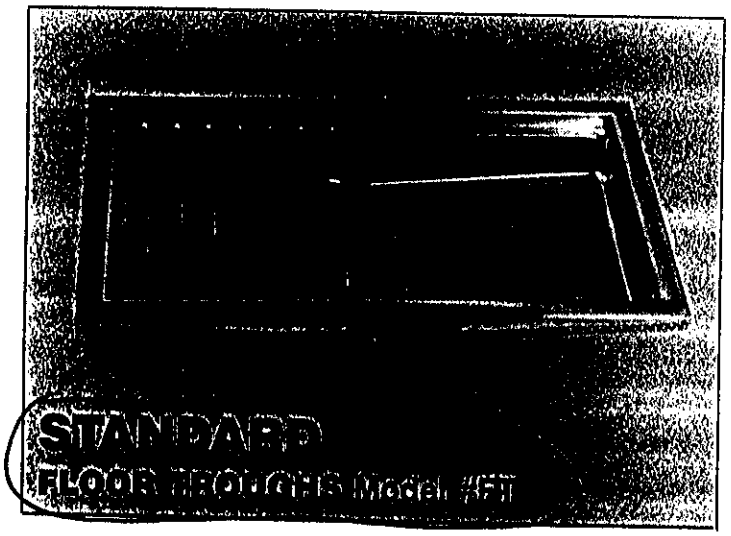
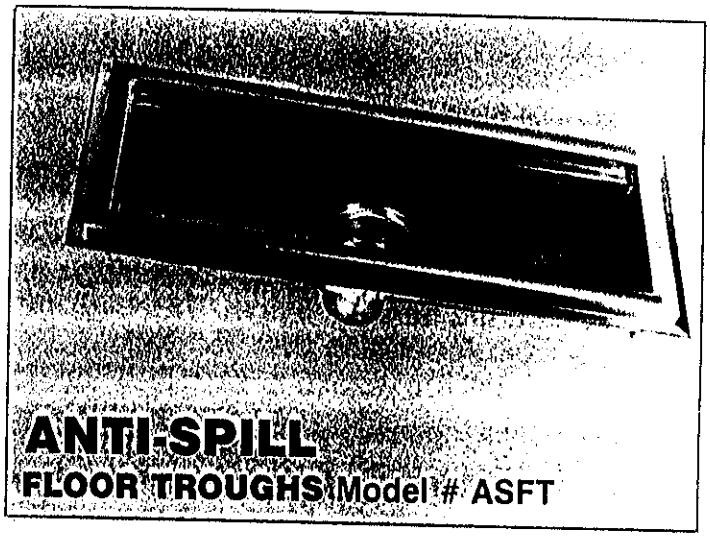
ITEM #30

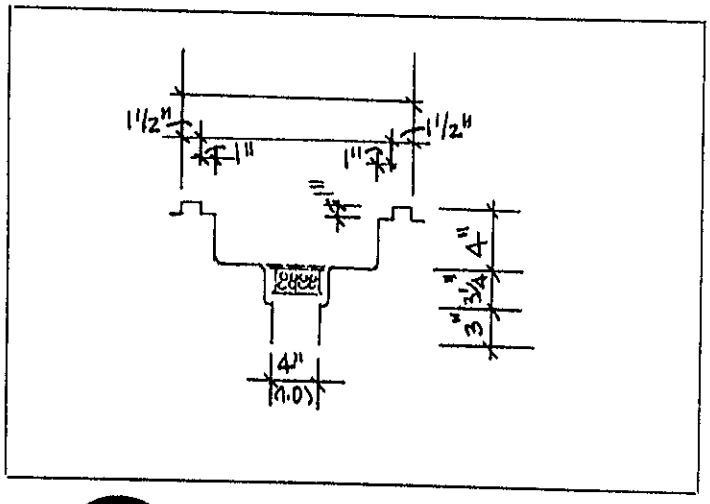
# STANDARD DEPTH FLOOR TROUGHS

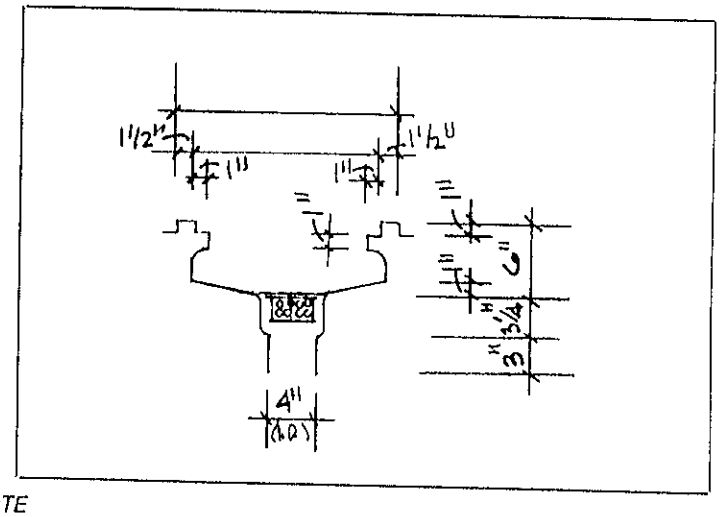




## CONSTRUCTION

All floor troughs are constructed of heavy duty 14 gauge stainless steel type 304- 18-8, completely welded and coved. All welds are ground & polished smooth. Troughs have built-in pitch towards wastes for complete drainage and anchor straps for securing. All troughs are fitted with special stainless steel waste cup with removable perforated stainless steel basket to accommodate up to 3" waste pipe. Advise size and location of waste outlet.





*NOTE*

*For troughs less than 15" wide 1½" top edge will become ¾";*

# GRATING FOR STANDARD TROUGHS

## SUBWAY GRATING /Model #SG

(All Type 304 Stainless Steel)

Grating to be constructed of 3/16″ x 1″ bars, set in a vertical position with open front and back for ease of draining.

Two (2) 1/2″ rods, set 3″ in from each edge, are wedged thru the bars full length. Three (3) 1/2″ rods are used for grating over 15″ wide.

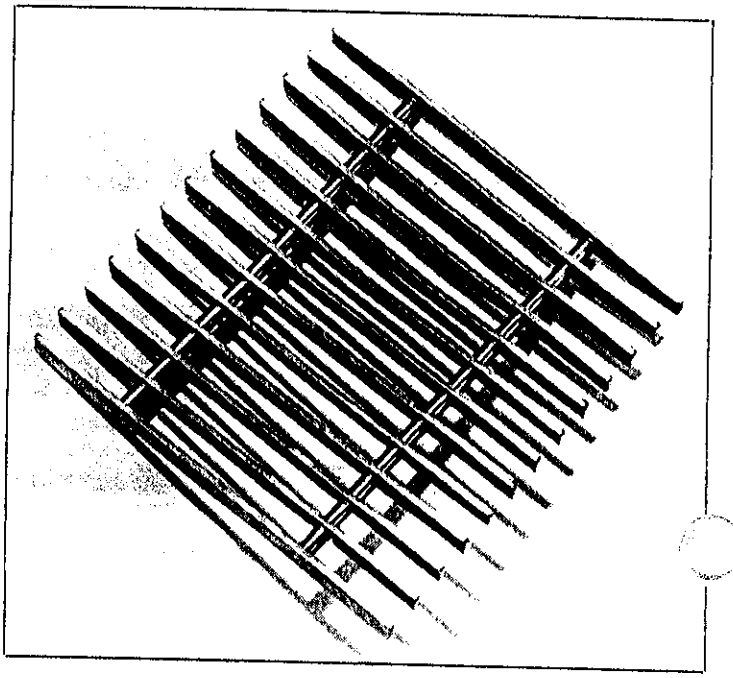
Rods are Heli Arc welded to each 3/16″ bar for rigidity thereby eliminating swaying and crevices.

There is 13/16″ clearance between bars so that wheels of mobile equipment will not become wedged.

Length of gratings are kept at maximum of 20″, for ease of handling and for cleaning in dishwasher.

(Longer lengths available upon request.)

(Bars can be had at any desired centers, specify)



## LOUVERED GRATING /Model #FG

Grating to be fabricated of 14 gauge 18-8 type 304 stainless steel.

Gratings are 1″ thick and have die formed louvers, one piece design with a #3 polished finish.

They are fabricated in approximately 20″ lengths and are easily removed for cleaning in dishwasher.

(Longer lengths available upon request.)

## Supremacy Series™ Solid Door Pass-Through Refrigerators and Freezers

**EXTERIOR / INTERIOR**

Cabinet exterior sides, front, and shroud shall be 22-gauge stainless steel. Facing of shroud shall be easily removable without the use of tools.

Cabinet interior shall be 22-gauge stainless steel. Bottom & top of liner shall be die-stamped to provide radius corners and a recessed bottom. Base shall be fully insulated with high-density foamed in place polyurethane.

Interior shall have 3 chrome-plated wire shelves per door section. Shelf support pilasters shall be heavy-duty stainless steel, with shelves adjustable at 1" (2.5 cm) increments. Units are mounted on 4" (10.16 cm) casters.

**DOORS**

Solid doors shall have a 22-gauge stainless steel exterior & interior liner, & shall be fully insulated with high density foamed in place polyurethane. Each door shall have 3 self-closing, cam-lift style hinges. Doors shall be easily removable without use of tools. Door gaskets shall be magnetic snap-in style to allow simple replacement. Door handles shall be recessed.

Glass doors shall be constructed with extruded aluminum frames. Refrigerator shall utilize insulated double-pane construction. Freezers shall utilize argon insulated double pane, low E construction. Glass doors shall be provided with self-closing, cam-lift style hinges, and shall be easily removable without the use of tools. Glass door cabinets shall be provided with high-output fluorescent lights.

Electronic controls shall be located behind a removable shroud facing. Main power switch shall be located on the junction box on top of the unit.

**THE FOLLOWING APPLIES TO REFRIGERATORS ONLY**

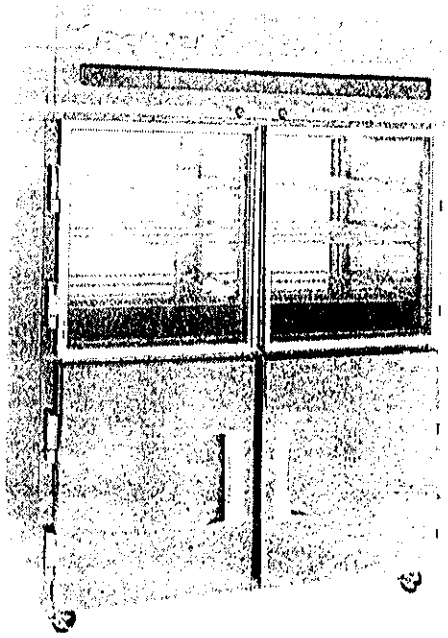
Refrigeration system shall use R404A refrigerant. System shall be completely outside food zone to maximize internal storage space. System shall utilize a dual diversion high flow air distribution system, and shall be a high capacity design with thermostatic expansion valves. Evaporator coils shall be coated to prevent corrosion. Cabinet shall maintain 34ºF to 40ºF (1ºC to 4ºC) internal temperature.

**THE FOLLOWING APPLIES TO FREEZERS ONLY**

Refrigeration system shall use R404A refrigerant. System shall be completely outside food zone to maximize internal storage space. System shall utilize a dual diversion high flow air distribution system, and shall be a high capacity design with thermostatic expansion valves. Evaporator coils shall have deep-corrugated staged fin construction for maximum efficiency with fewer defrost cycles. Cabinet shall maintain –10ºF to 0ºF (-23ºC to -18ºC) internal temperature.

**SINGLE VOLTAGE MODELS ONLY**

Electrical connections shall be 115 volt, 60 hertz, single phase, with an 8 ft (2.4m) long electrical cord & plug as shown on reference chart. Cord & plug shall be wired to the junction box on top of the unit.



**MODEL SRPT2-GHSH**

**DUAL VOLTAGE MODELS ONLY**

Electrical connections shall be 115/208-230 volt, 60 hertz, single phase, and must be hard-wired to the junction box located on top of the unit.

**OPTIONS & ACCESSORIES**

- Stainless steel backs
- Laminate on doors & ends
- Additional shelves and bridges
- Tray Slides
- Kick panels
- Half-size hinged glass or stainless steel doors, two doors per section
- Remote refrigeration
- Correctional Facilities package
- ERC-2 microprocessor - based controls
- 6" (15.24 cm) diameter legs (adds 2" to over height of unit)

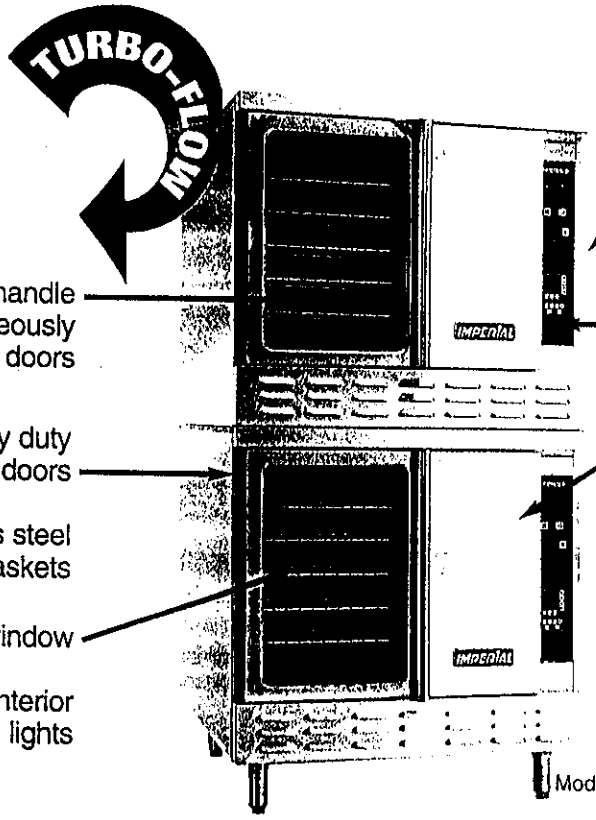
# Turbo-Flow Convection Ovens

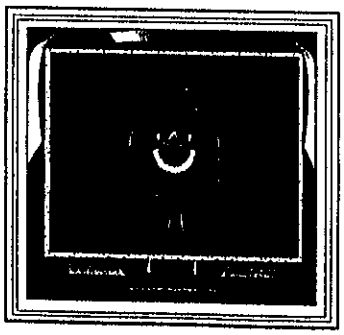
## Single and Double Deck Models



Model # ICV-2

### Turbo-Flow Standard Features

- Stainless steel exterior: doors, sides, legs and top.
- Large window and two interior lights for easy viewing of products being cooked.
- Single handle simultaneously opens both doors.
- Heavy duty 60/40 stainless steel doors.
- Rugged 1/2 h.p. – two speed motor for high volume or delicate baking.
- 70,000 BTU oven – Standard depth (ICV) and 80,000 BTU oven – Bakery depth (ICVD) for high production cooking and fast recovery.
- Model ICV-1 includes stainless steel legs as standard. Stainless steel shelf and adjustable rack supports are optional.
- One year parts and labor warranty.
- AGA and CGA design certified, NSF and CE listed.



Turbo-Flow System

### Turbo-Flow Convection Ovens

The Turbo-Flow offers commercial kitchens a reliable full featured convection oven that raises the industry standard.

Imperial's Turbo-Flow System provides even cooking throughout the entire 70,000 BTU oven by recirculating hot air to maximize efficiency. It creates an air flow pattern that simultaneously heats the inner and outer oven cavity. This results in efficient, even heating and fast recovery. The oven features 60/40 doors that are mechanically driven to allow complete easy access to the interior. They swing open to 130° permitting a workable loading area around the oven.

The spacious porcelainized interior has two lights with a momentary switch outside of the oven for easy product viewing through the large window. Imperial provides five chrome racks that can be placed into 12 positions allowing maximum loads within the oven.

Two speed fan, 1/2 h.p. motor and 60 minute timer give the operator the flexibility to cook many different types of casseroles, pastries, meats, breads and desserts. Available with optional Cook and Hold computer control.

| ICVD-2 | Double Deck, Bakery depth | 38" | 74" | 44 1/4" | 160,000 | 536 | 1185 |

Note: For Cook and Hold computer control feature add the suffix "– H" for one oven or "– HH" if required for both ovens.

**Crated Dimensions:** Add 2" to width; 7" to depth; and 3" to oven cabinet height.

### Options

- Available in single or double deck models.
- Stainless steel stand with bottom shelf and adjustable rack supports.
- Draft hood with stainless steel finish.
- Heavy duty 6" swivel casters.
- Stacking kit with 6" stainless steel legs.
- Cook and Hold computer control.
- Standard and bakery depth.

### Gas Requirements

| | |
|---|---|
| Manifold pressure | 5.0" W.C. Natural Gas |
| | 10.0" W.C. Propane Gas |
| Manifold size | 3/4" NPT. |
| Input Rating | 70,000 BTU/hr. (per oven- ICV) |
| | 80,000 BTU/hr. (per oven- ICVD) |

### Electrical Requirements

120 VAC, 1ph, 60 Hz, 9 Amps Max. (per oven)
Two speed motor - 1/2 h.p., 1725/1140 RPM.
Optional 208/240 motor or transformer.

### Minimum Clearance

For use only on non-combustible floors with legs or casters; or 2 1/4" overhang is required when curb mounted.

0" clearance from non-combustible side and rear walls. Provide 6" minimum clearance from combustible side walls and 0" from combustible wall at rear.

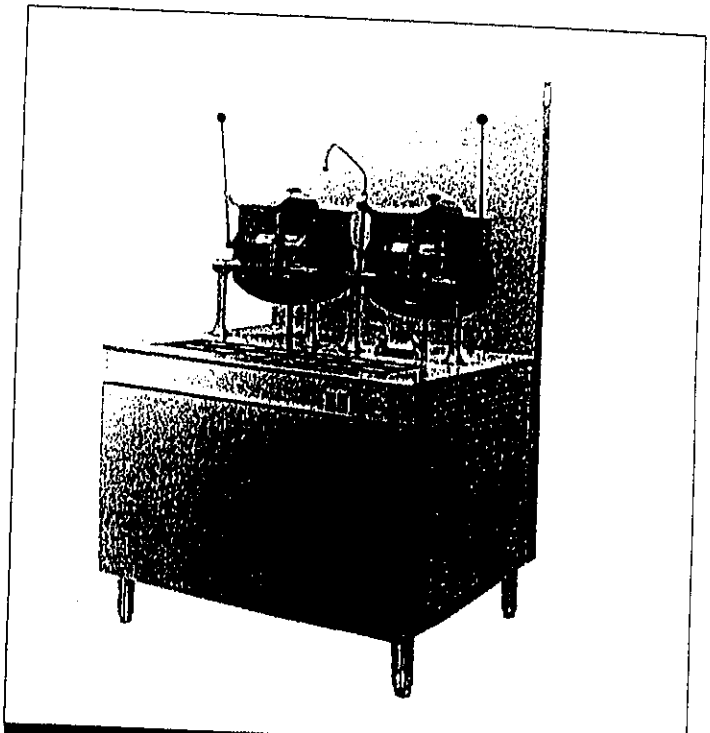
### Cleveland Standard Features

- Factory assembled Kettle/Steam Generator NickelGuard Base combination with one or two,6 gallon kettles with 200M BTU Gas-Fired Steam Generator
- Solid State steam generator Water Level Controls
- Low Water Safety Cut-Off
- Pressure Limit Controls with 15 psi Safety Valve
- Type 430 Stainless Steel exterior enclosure, and table top (with Drain Trough which has 1.50" diameter male drain), #4 exterior finish
- Type 304 Stainless kettle(s), #4 exterior finish
- Separate "Start/Reset" Illuminated Switch Controls,plus Pressure Gauge
- Solid State Electronic Spark Ignition for energy savings
- Major components serviceable from the front of the unit
- 6 gallon kettle(s) are 2/3 Steam Jacketed and include Lift off Cover(s)
- Hot and Cold Water Faucet with Swing Spout
- Kettle(s) have 50 psi Steam Jacket Rating, 50 psi chrome plated Safety Valve(s) and Manual Tilting, balanced design
- Tilt Handles can be mounted on either side
- Steam Generator empties under pressure (blowdown) automatically upon each Shut-Down. Automatic Water Refill on Start-Up
- Standard voltage for controls is 115 volt, 60 Hz, single phase
- Adjustable Flanged Feet (FF-A)

### Options & Accessories

- ☐ Power Take-Off Kit (GPTO)
- ☒ Secondary Low Water Cut-Off, factory installed (CALG) (Required for AZ. AR. CA. CO. CT. DE. FL. GA. HI. IL. IA. KS. MD. MA. MI. MN. MT. NE. NV. NM. NC. OK. OR. PR. RI. TN. UT. VA. WA. WV., Buffalo, NY, Wash. DC)
- ☐ Gas, other than natural
- ☒ Type 316 Stainless Steel kettle interior for high acid food products (316)
- ☐ Food Strainers (FS)
- ☒ Stainless Steel Base Frame (FSS)
- ☐ 300,000 BTU Gas-Fired Boiler with Nickelguard
- ☐ Boiler Descaling Pump Kit (107142)



### SHORT FORM SPECIFICATION

*Shall be CLEVELAND, Modular Cabinet Base with one or two, 6 gallon kettle(s), Model ____ GM-K ____ -200, 200M Nickelguard BTU Gas-Fired Steam Generator, type 430 Stainless Steel exterior enclosure, Table Top, Back Splash and 4 level adjustable feet. 2/3 Steam Jacketed type 304 Stainless Steel kettle(s) with 50 psi Steam Jacket Rating; needle type Steam Control Valve on each kettle. Console mounted Controls, Pressure Gauge and Illuminated "Start/Reset" Control Switches. Solid State Water Level Steam Generator Controls and Electronic Spark Ignition. Steam Generator drains under pressure (blowdown) after each Shut-Down with Automatic Water Refill on Start-Up. 15 psi Safety Valve*

Cleveland Range Inc.
Ph: 1-216-481-4900 Fx: 1-216-481-3782
1333 East 179th St., Cleveland, Ohio, U.S.A. 44110
Visit our Web Site at www.clevelandrange.com

- CAPACITIES: (in 4 oz. servings) (Other sizes may be calculated)

  6 gallons / 23 liters. . .160 per kettle

- Many local codes exist and it is the responsibility of the Owner and Installer to comply with those codes.

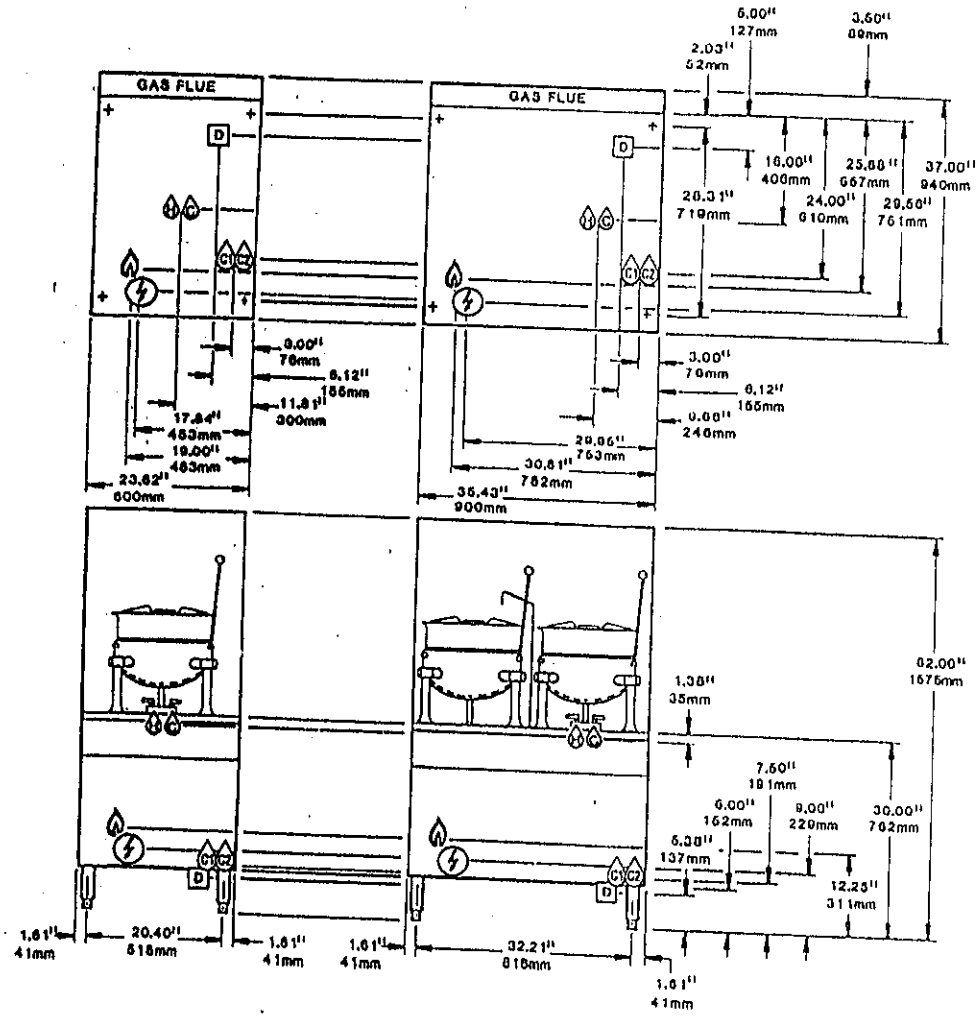
- Cleveland Range equipment is built to comply with applicable standards for manufacturers. Included among those approval agencies are: UL, A.G.A., NSF, ASME/N.Bd., CSA, CGA, ETL, and others.

## WATER QUALITY REQUIREMENT

The recommended minimum water quality standards whether untreated or pre treated, based upon 10 hours of use pe day, and a Daily Blowdown, are as follows:

| | |
|---|---|
| TOTAL DISSOLVED SOLIDS | less than 60 parts per million |
| TOTAL ALKALINITY | less than 20 parts per million |
| SILICA | less than 13 parts per million |
| CHLORIDE | less than 30 parts per million |
| pH FACTOR | greater than 7.5 |

Consult a local water treatment specialist for an on site water analysis for recommendations concerning steam generator feed water treatment (if required), in order to remove or reduce harmful concentrations of minerals. The use of highly mineralized water will mean that more frequent servicing of the steam generator will be necessary. The fact that a water supply is potable is not proof that it will be suitable for the generator.



| GAS | ELECTRIC | WATER | DRAINAGE | CLEARANCE |
|---|---|---|---|---|

### APPLICATION DATA

For use over all types of cooking equipment; unique grease extractor has auto wash and internal fire protection and extracts up to 95% of grease contaminants. Canopies are generally installed 6'-6" above finished floor. Stainless steel enclosure panels to the ceiling are available, or the hood may be recessed into the non-combustible false ceiling, depending on type of air make up - contact factory.

### SUPPLY AIR MAKE-UP

☐ TYPE " P" LOW VELOCITY FRONT DISCHARGE SUPPLY

Integral supply make-up air normally sized at 80% of exhaust volume, remaining 20% from adjacent areas to contain odors within the kitchen. Normally air is heated to 55°-65°F. Consult factory for specifics.

The perforated front panel slows the supply air velocity to lessen the effect of partially tempered outside air on conditioned room air. When lowest velocity is desired, the 30" high plenum [ventilator] is recommended.

☐ TYPE "I" INTEGRAL "SHORT CYCLE" SUPPLY

The integral "short cycle" supply air plenum may be used with up to 70% untempered air per U.L. testing. Some local codes limit this percentage or do not allow the "short cycle" concept. Normally, this type hood is used in warmer climates not susceptible to the colder, higher density winter air.

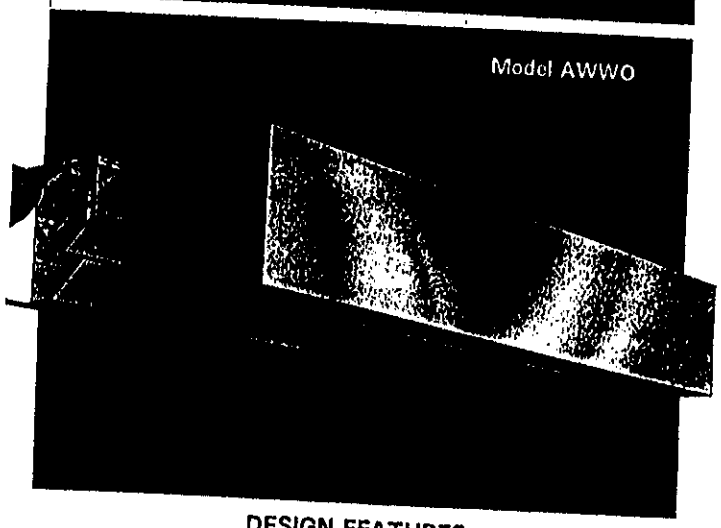
Integral untempered supply make-up air varies according to exhaust requirements, 20% recommended from adjacent areas to contain odors within the kitchen and remaining amount from ceiling registers located ideally 20 ft. from the hood. Consult factory for specifics.

☐ TYPE "E" EXTERNAL FRONT GRILL SUPPLY

Same air volumes as "P" type. Recommended for installations where finished ceiling is less than 9 ft. prohibiting effective use of "P" type [above]. The 4-way diffusers and internal balancing dampers allow precise directional control. Generally, air is conditioned to room temperature and directed just below the ceiling.

☐ TYPE "D" DUAL EXTERNAL AND INTERNAL SUPPLY

Integral supply make-up air normally sized at 80% of exhaust volume, remaining 20% from adjacent areas to contain odors within the kitchen. A combination of "I" and "E" type, allows for fine tuning of short cycle air supply. Varying climates may require incoming air to be conditioned to room temperature.



### DESIGN FEATURES

- U.L. Listed. Complies with all national codes.
- Auto wash and internal fire protection system.
- Unique extractors remove up to 95% of grease contaminants.
- Integral supply air balancing and fire damper.
- Electromechanical, resettable exhaust fire damper.

### OPTIONS AND ACCESSORIES

- U.L. Listed fusible link exhaust fire damper.
- Stainless Steel enclosure panels to ceiling.
- Auto Wash Control Panel with:
  - √ Fan and/or light switch
  - √ Fire System Interface
  - √ H.O.A. Fan Starter Interface
- Integral fire suppression system enclosure.
- Wet chemical fire suppression system.
- Water mist fire protection system with gas reset.
- Fan motor controller package
- Exhaust & supply fan package

### EXHAUST AIR RECOMMENDATIONS

| TYPE EQUIPMENT | MIN. EXHAUST |
|---|---|
| Light Duty<br>Ovens, Steamers, Kettles [25 psig] | 200 cfm/lin. ft. |
| Medium Duty<br>Ranges, Griddles, Fryers, Fry Pans, Kettles [45 psig] | 250 cfm/lin. ft. |
| Heavy Duty<br>Hot Top Ranges, Upright Broilers, Electric Charbroilers | 300 cfm/lin. ft. |
| Extra Heavy Duty<br>Gas and Solid Fuel Charbroilers, Woks [water cooled], Kettles [100 psig] | Consult Factory |

The above figures are to be used as a guideline only. Since local field conditions vary greatly, we strongly suggest you consult the factory or your local AVTEC Representative.

| 15' | 3000 | 10"x24" | 2400 | 2-10"x16" | 3750 | 10"x30" | 3000 | 2-10"x20" | 4500 | 10"x36" | 3600 | 2-10"x30" |

For cfm, static pressure and duct collar sizes other than above, see Air Flow Requirements form no. 14012. Air speeds vary according to duct collar size; average speeds are 1800 fpm exhaust and 1000 fpm supply.

Use above chart for supply air types "P", "E" & "D"; 80% supply air volume shown, 20% from adjacent areas to contain cooking odors within kitchen.

Do not use above chart for untempered short cycle supply type "I"; this should be sized at 40% to 70% of exhaust cfm, 20% from adjacent areas to contain odors remaining amount from ceiling registers approximately 20 ft. from hood - contact factory.

# AUTO WASH VENTILATOR CONTROL PANEL

Model VCWW

AVTEC

U.S. Patent # 4,156,432

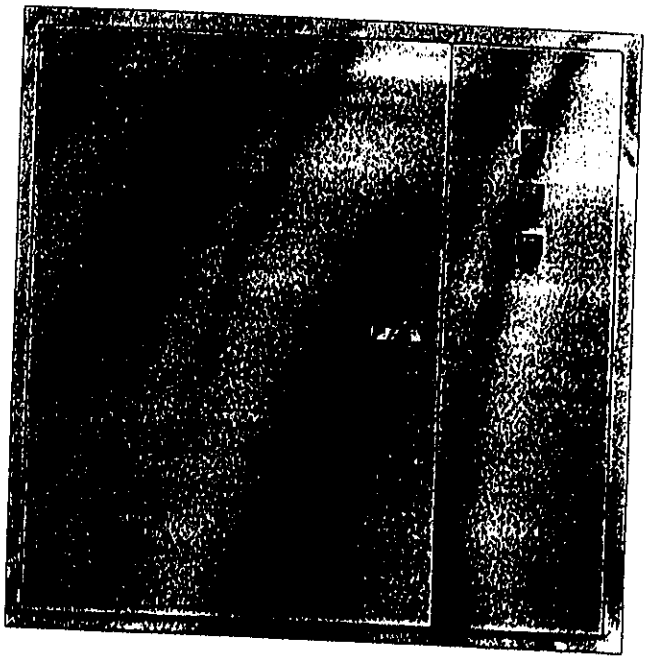
## *ECONOMY CONTROL . . WITH AVTEC*

### APPLICATION DATA

The AVTEC Auto Wash Ventilator Control Panel is supplied with the AVTEC Auto Wash Ventilator. The cabinet houses the electrical and plumbing components necessary to control the exhaust [and air make-up] fan(s), auto wash self-cleaning cycle and plenum fire protection system.

One panel will control one or more fans if operated simultaneously. Each panel will operate up to 50 linear feet of ventilator with a single wash [0-10] minutes]; for over 50 feet, use two or more panels. If hot water and low pressure is limited and sequential washes are desired, we recommend the AVTEC "PAWS" Control Panel.

An electric thermal detector fire switch is mounted in the duct collar and automatically activates the plenum fire protection [spray], closes the adjacent fire damper and turns off the fan. An optional flush mounted or remote manual pull fire switch is available to activate the plenum fire protection [spray] and exhaust fan [to remove fumes]. Surface cooking fire protection should be specified with this system. AVTEC'S MIST-A-FIRE System is recommended if a building sprinkler system is available; the control panel for this system may be combined with the AVTEC "PAWS" Control Panel.



### DESIGN FEATURES

UL NSF

- Automatic Wash System shuts OFF fan and injects detergent and hot water into grease extractor chamber for up to ten minutes
- Optional Manual Fire Switch initiates fire quenching spray in plenum and activates fan to remove toxic fumes.
- Automatic Thermal Fire Detector initiates fire quenching spray in plenum, closes the damper to prevent fire from spreading to the ductwork and deactivates the fan.
- Optional Vent Light Switch may be conveniently mounted on control panel.
- Optional Low Level Detergent Alarm

| 0 - 15' | ¾" |
| 16' - 24' | 1" |
| 25' - 50' | 1¼" |
| over 50' | ** |

** Use multi-wash. Contact factory.

H.W. Flow Rate=1.2 GPM/ft. @25psi (140°F for 3-5 min.)

### PLUMBING CONTRACT

**BUILDING SERVICES**

VP2 ☐ ____" hot water (140°F) to control panel (20 to 40 psi)

**FIELD INTERCONNECTIONS**

VP3 ☐ ____" hot water (140°F) to ventilator ____places.
VP4 ☐ 3/8" Detergent tubing
- A ☐ From detergent pump to injection tee.
- B ☐ Inserted in remote detergent tank.

**OPTIONAL**

VP7 ☐ 3/4" cold water to control panel.
VP8 ☐ 3/4" cold water to vent ____places.

NOTE: Other required connections are shown on Ventilator Rough-In Data Sheet.

**IMPORTANT NOTE: The various trades' installation responsibilities must be included in their contracts.**

## SPECIFICATIONS

Provide AVTEC U.L. Listed, NSF approved, (surface) (recessed) wall mounted Auto Wash Ventilator Control Panel, Model No. VCWW to operate AVTEC ventilator fan(s), wash cycle and internal plenum and duct collar fire protection system. Control panel to be 18 gage stainless steel and shall house all electrical and plumbing components.

Electrical components to consist of FAN START, FAN STOP/WASH START & RESET buttons, adjustable auto wash timer, 0 to 10 minutes, detergent pump prime switch, and thermal detector switch. RESET button to interrupt FAN ON or WASH ON modes.

Plumbing components to consist of ball type shut off valve, wye-strainer, pressure-temperature gage, shock absorber, solenoid valve, detergent pump and 2 gallon reservoir.

All components to be pre-wired and pre-plumbed ready for field connection by applicable trades.

### ACCESSORIES

- ☐ Provide illuminated STOP/START buttons.
- ☐ Provide (panel mounted) & (remote) manual pull fire switch.
- ☐ Provide vent light switch.
- ☐ Provide (integral 5 gal.) (remote 5 gal.) (remote 25 gal.) detergent tank (and pump).
- ☐ Low Level Detergent Indicator with Audio Alarm

### OPTIONAL

- ☐ Provide micro-switch in lieu of thermal detector to operate fan and wash spray in fire condition, upon signal from fusible link damper.

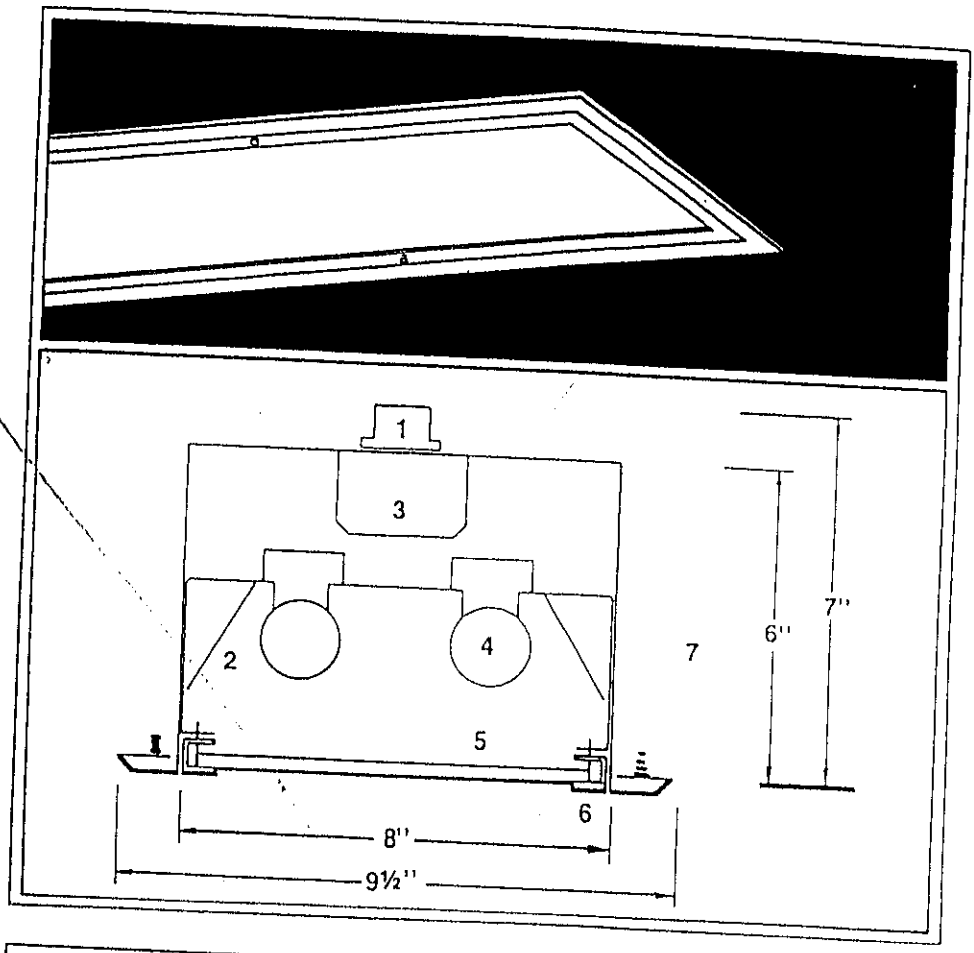
## recessed fluorescent cooking hood group

Suitable for use in Commercial Cooking Hoods.

Use inside or on Commercial Cooking Hoods and other Food Handling or Preparing Areas.



1 - **Wiring** Rigid conduit is connected to the special UL listed threaded hub and connections to the fixture made.

2 - **Reflector** Inside reflector with a minimum of 87% diffuse reflective baked white enamel finish.

3 - **Ballast** Standard 120 volt 60 cycle, high power factor, Class P, UL Listed. For other voltages specify on order.

4 - **Lamp** T-12 fluorescent lamps by others.

5 - **Diffuser** Heat and shock resistant crystal 73 tempered, prismatic glass, with prisms on the inside of fixture, is mounted into the door frame and sealed with special gasketing.

6 - **Door Frame** Channel door frame, held with twin springs and chain, is locked with captive stainless steel thumbscrews for easy servicing. All back surfaces are completely sealed with special gasketing.

7 - **Mounting** All NSF Cooking Hood group fixtures are supplied with 8/32 x 3/4 studs. If studs are not needed, fieldcut studs to facilitate installation.

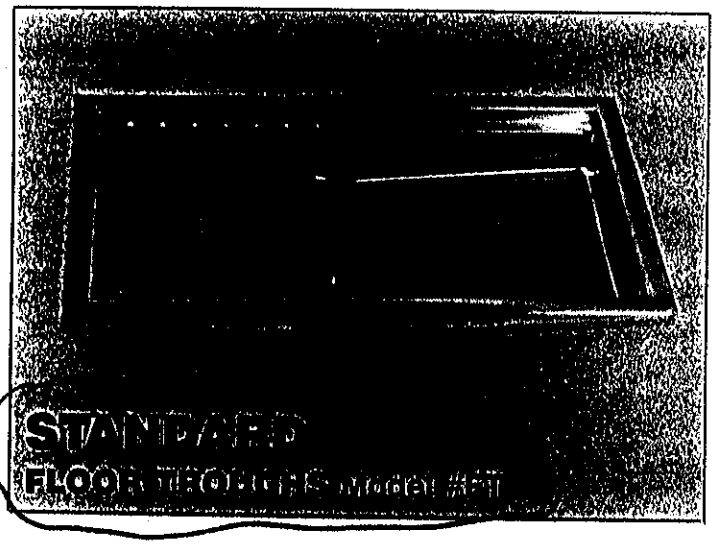
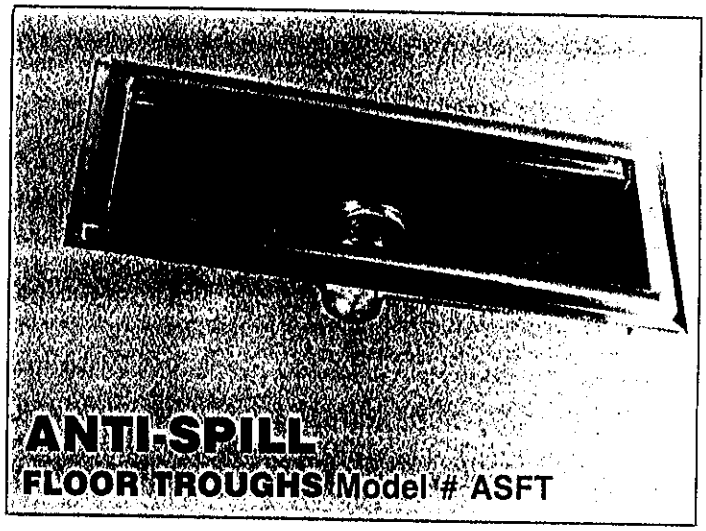
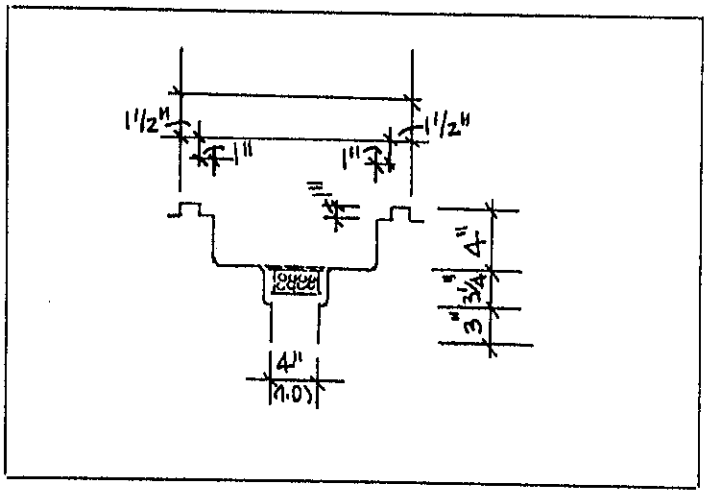
# STANDARD DEPTH FLOOR TROUGHS

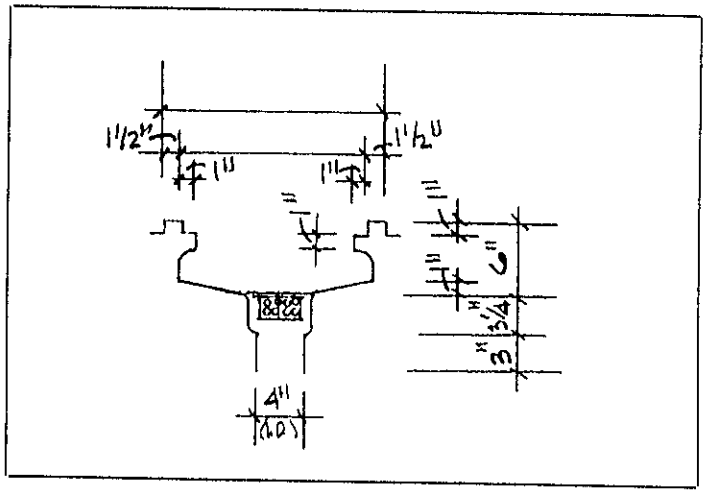




## CONSTRUCTION

All floor troughs are constructed of heavy duty 14 gauge stainless steel type 304- 18-8, completely welded and coved. All welds are ground & polished smooth. Troughs have built-in pitch towards wastes for complete drainage and anchor straps for securing. All troughs are fitted with special stainless steel waste cup with removable perforated stainless steel basket to accommodate up to 3″ waste pipe. Advise size and location of waste outlet.





*NOTE*

*For troughs less than 15″ wide 1½″ top edge will become ¾″.*

FOOD SERVICE CORP. 1-800-221-5644
POST OFFICE BOX 206 • COPIAGUE, NEW YORK 11726 • 516-789-8881

# GRATING FOR STANDARD TROUGHS

## SUBWAY GRATING /Model #SG

(All Type 304 Stainless Steel)

Grating to be constructed of 3/16″ x 1″ bars, set in a vertical position with open front and back for ease of draining.

Two (2) 1/2″ rods, set 3″ in from each edge, are wedged thru the bars full length. Three (3) 1/2″ rods are used for grating over 15″ wide.

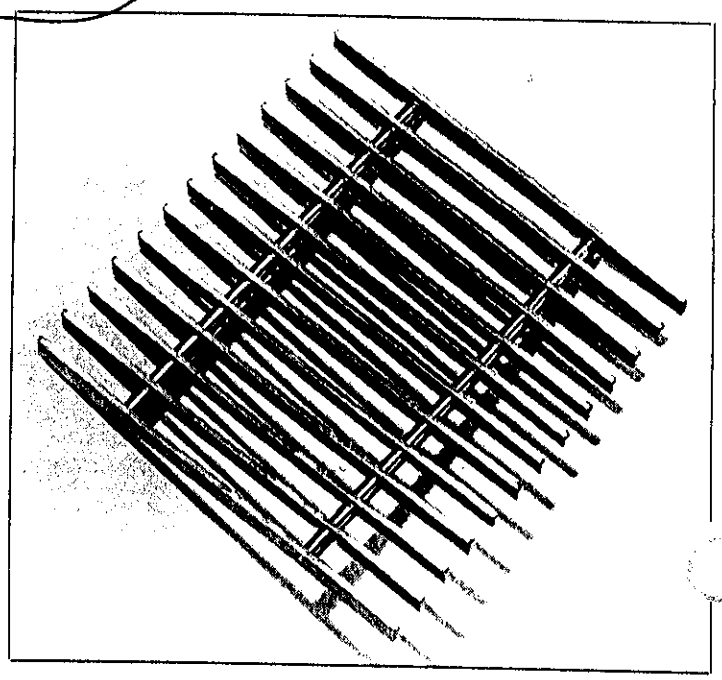
Rods are Heli Arc welded to each 3/16″ bar for rigidity thereby eliminating swaying and crevices.

There is 13/16″ clearance between bars so that wheels of mobile equipment will not become wedged.

Length of gratings are kept at maximum of 20″, for ease of handling and for cleaning in dishwasher.

(Longer lengths available upon request.)

(Bars can be had at any desired centers, specify)



## LOUVERED GRATING /Model #FG

Grating to be fabricated of 14 gauge 18-8 type 304 stainless steel.

Gratings are 1″ thick and have die formed louvers, one piece design with a #3 polished finish.

They are fabricated in approximately 20″ lengths and are easily removed for cleaning in dishwasher.

(Longer lengths available upon request.)

#41 + #72

# FIRE SUPPRESSION SYSTEMS DATA SHEET

# SPECIFICATIONS MODEL R-102

### Total System

The restaurant fire suppression system shall be the pre-engineered, liquid agent, cartridge-operated type with a fixed nozzle agent distribution network. It shall be listed with Underwriters Laboratories, Inc. (UL).

The system shall be capable of automatic detection and actuation with local or remote manual actuation. Accessories shall be available for mechanical or electrical gas line shut-off applications.

The system shall have fire suppression capabilities for the following restaurant hazard areas: ventilating structures including hoods, ducts, plenums, and filters; deep-fat fryers; griddles and range tops; upright, natural charcoal, or chain-type broilers; electric, lava rock, or gas-radiant char-broilers.

A system owner's manual shall be available containing basic information pertaining to system operation. A detailed technical manual shall be supplied including system description, design, installation, recharge, and maintenance procedures, plus accessory installation and reset instructions.

The manufacturer shall provide services through a network of authorized distributors.

### System Equipment

**Agent** – The extinguishing agent shall be a potassium carbonate, potassium acetate-based formulation designed for flame knockdown and securement of grease-related fires. It shall be available in plastic containers with instructions for liquid agent handling and usage.

**Tank and Bracket** – The liquid agent storage tank shall be stainless steel with a three gallon (11.4 L) capacity. The shell assembly shall meet the following pressure test requirements: 100 psi (690 kPa) working pressure, 300 psi (2069 kPa) test pressure, 600 psi (4137 kPa) minimum burst pressure.

The tank shall include an adaptor/tube assembly. The adaptor shall be chromium-plated steel with a 1/4-18 NPT female inlet and a 1/2-14 NPT male outlet. The pick-up tube shall be 304L stainless steel - 1/2 in. O.D. by .028 wall.

A welded steel bracket shall be provided for mounting the tank in a minimum amount of space. The agent tank shall be secured with hinged bracket bands.

**Discharge Nozzles** – Each discharge nozzle shall be tested and listed with the restaurant system for specific applications. Nozzle placement shall be determined by the size of the orifice in the nozzle tip. The nozzle tip shall be brass or chromium-plated brass, and stamped with the part number and flow rating. The nozzle tip retainer and body shall be chromium-plated brass. The nozzle strainer shall be brass with stainless 50 mesh screen. Each nozzle tip shall be covered by a protective blow-off cap.

**Regulated Release Mechanism** – The regulated release mechanism shall be the spring-loaded, mechanical/pneumatic type capable of providing the expellant gas supply to one or two agent tanks, depending on the capacity of the nitrogen cartridge used. It shall contain a factory-installed regulator deadset at 100 psi (690 kPa) with an internal relief of approximately 130-150 psi (896-1034 kPa). In the "armed" position, the main spring force to the puncture pin piston shall be 150 lb. (68 kg). The mechanism shall have a visual indicator of the cocked or fired condition without having to open the enclosure.

The regulated release mechanism shall have the following actuation capabilities: automatic actuation by a fusible link detection system; remote manual actuation by a mechanical pull station; local manual actuation by a push button located at the front of the release mechanism enclosure.

The regulated release mechanism shall be housed in a chromium-plated 16 ga. sheet steel enclosure with cover. The enclosure shall contain knock-outs for 1/2 in. conduit. The cover shall contain openings for the push button and visual indicator.

The regulated release mechanism shall be compatible with mechanical gas line shut-off devices; or, when equipped with a field or factory-installed solenoid and switch, it shall be compatible with electric gas line or appliance shut-off devices.

**Detection System** – The regulated release mechanism shall be compatible with a fusible link detection system.

The fusible link shall be selected and installed according to the operating temperature in the ventilating system. The fusible links shall be rated as follows:

| Fusible Link Temperature Rating | Use Where Operating Temperature Does Not Exceed |
|---|---|
| 280 °F (130 °C) | 225 °F (107 °C) |
| 360 °F (182 °C) | 290 °F (143 °C) |
| 450 °F (232 °C) | 360 °F (182 °C) |
| 500 °F (260 °C) | 400 °F (204 °C) |

The fusible link shall be supported by a detector bracket/linkage assembly. The detector bracket shall be 16 ga. cold-rolled stainless steel. The detector linkage shall be 20 ga. cold-rolled stainless steel.

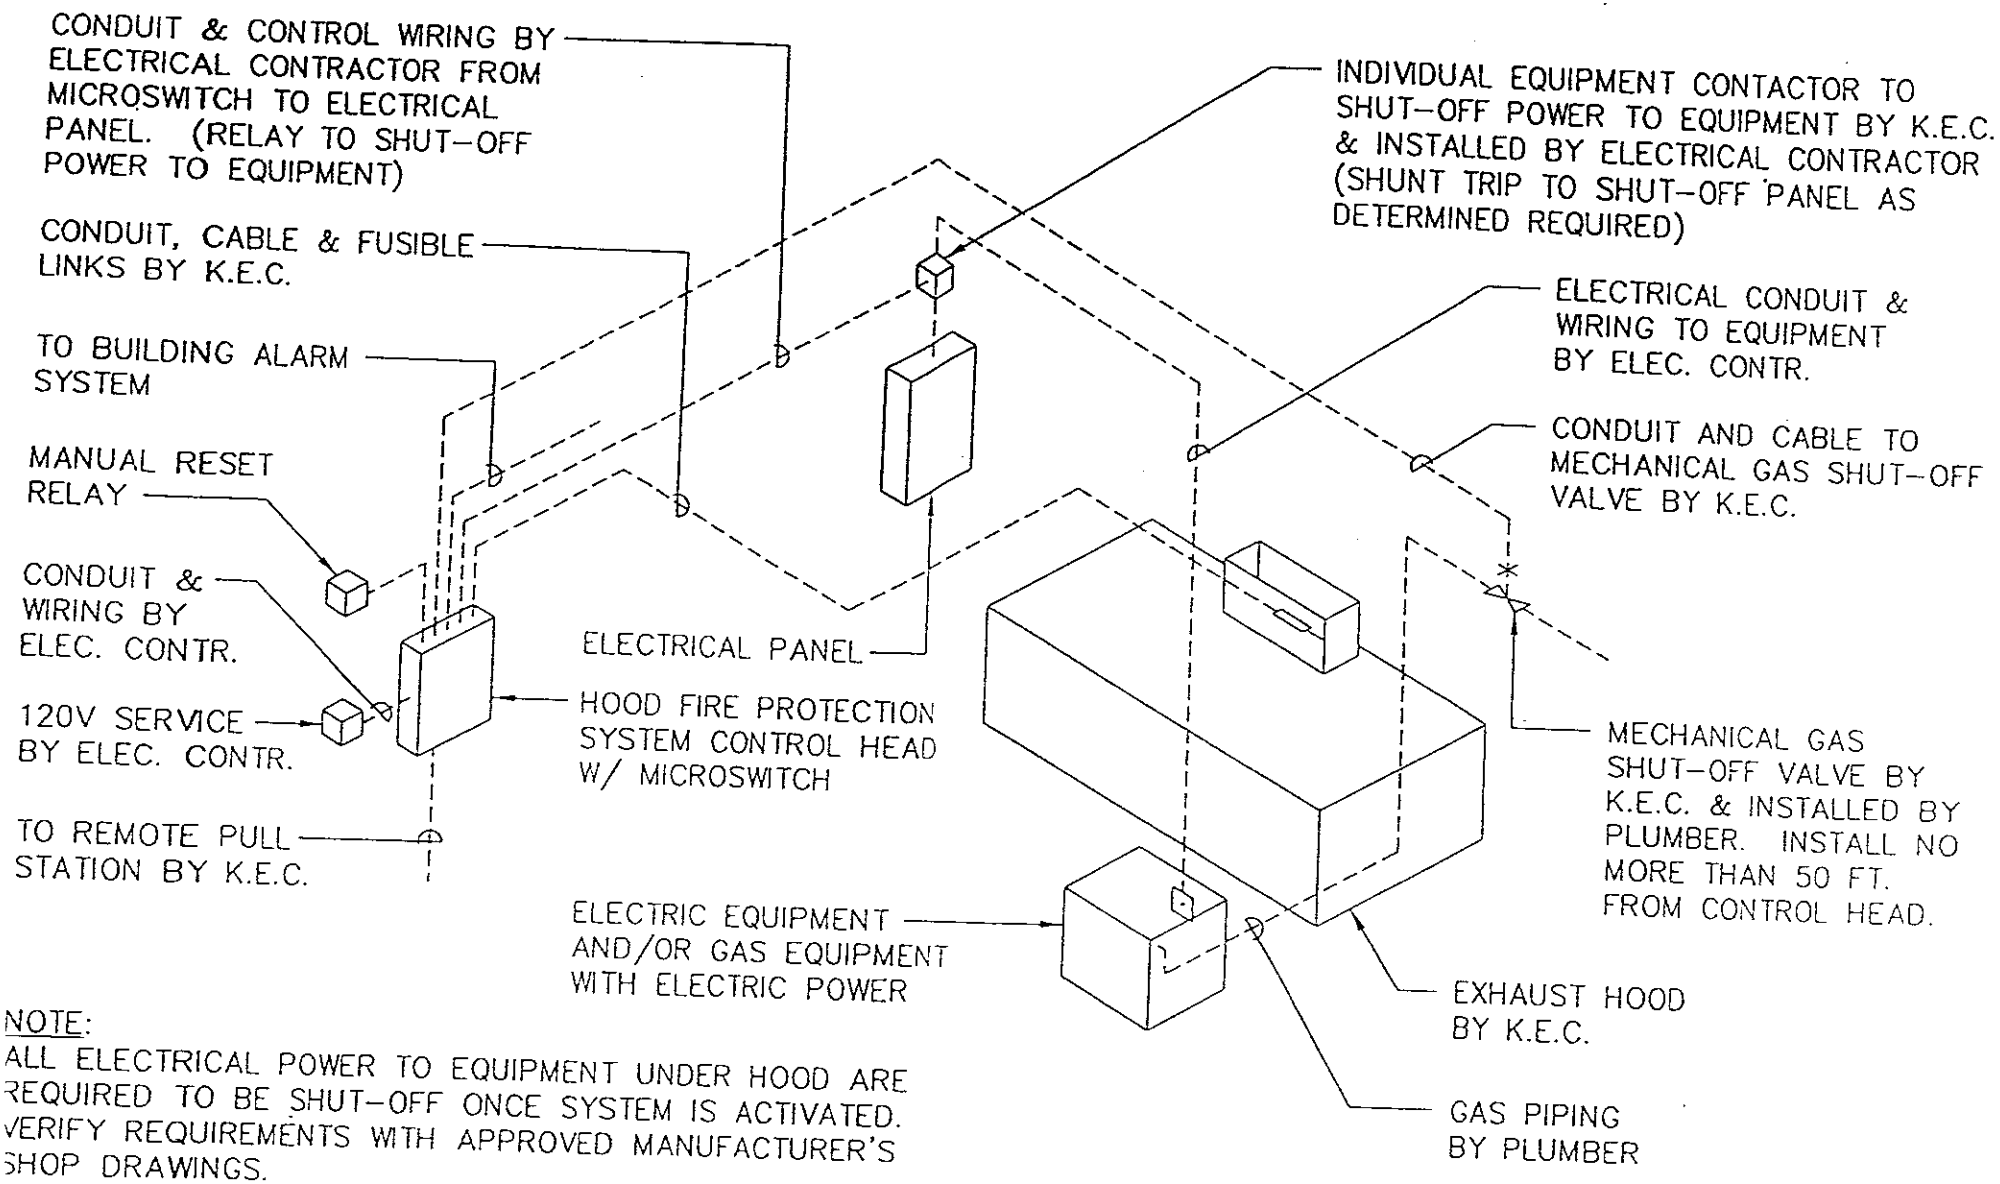
The detector bracket/linkage assembly shall have provisions for connecting 1/2 in. rigid or EMT thin-wall conduit, and 1/16 in. (1.6 mm) diameter flexible stainless steel rope. Changes in the direction of the conduit and steel rope shall be accomplished with die cast aluminum alloy, 90° pulley elbows.

### Accessory Equipment

The following accessory equipment shall be available, and shall be compatible with the liquid agent restaurant fire suppression system:

**Remote Manual Pull Station** – If the release mechanism is not accessible for manual actuation, a remote manual pull station shall be provided as the primary means of manual actuation. The pull station shall be the glass break-rod type, and shall be connected to the release mechanism trip lever by means of a 1/16 in. (1.6 mm) diameter stainless steel rope and 1/2 in. conduit. The pull station shall be located at a distance of not more than 125 ft. (38 m) from the release mechanism. The mounting height of the pull station shall be in accordance with the authority having jurisdiction.

**Mechanical Gas Line Shut-Off Valve** – A UL listed, mechanical gas valve shall be provided when automatic gas line shut-off is required for indoor applications. It shall be adapted to the release mechanism cartridge receiver by means of a pneumatic piston-type air cylinder. The valve shall have resilient seating



NOTE:
